POST-OFFICE DEPARTMENT,
OFFICE OF SECOND ASSISTANT POSTMASTER-GENERAL,
Washington, D. C., July 24, 1886.

TABLE No. 2.—*Statement showing annual rate of cost of star, steamboat, and mail-messenger service on the 31st day of March, 1885, the principal changes therein since, and the occasion thereof, and the total annual cost on the 30th day of June, 1886.*

	Star.	Steamboat.	Mail messenger.
Cost of service March 31, 1885	$5,430,993	$594,849	$876,776
Net decrease in this rate effected in April, May, and June, 1885, as per table of details No. 1	16,189	31,847	27,012
Annual rate of cost, June 30, 1885	5,414,804	563,002	
Increase in annual rate of cost taking effect July 1, 1885, under contracts which had been let previous to March 4, 1885 (under general and miscellaneous advertisements of September 15, 1884, and February 2, 1885), for new and additional service to begin July 1, 1885	238,856		
Decrease in steamboat-service cost by new contracts which had been made previous to March 4, 1885, upon routes already existing		8,924	
Gives annual rate of cost July, 1885	5,653,660	554,078	
Net decrease effected between July 1, 1885, and June 30, 1886, as per table No. 1	300,499	107,659	18,579
Leaves annual rate of cost on June 30, 1886	5,353,161	446,419	831,185

TABLE No. 4.—*Showing decrease in annual rate of cost of star and steamboat service in the States of Arkansas, Louisiana, Texas, Kansas, Nebraska, Colorado, Oregon, Nevada, and California; the Indian Territory, and the Territories of Dakota, Montana, Wyoming, New Mexico, Arizona, Utah, Idaho, Washington, and Alaska, to take effect from July 1, 1886, by reason of new contracts made under advertisements of September 15, 1885, January 6, 1886, and February 1, 1886, as compared with service as existing under former contracts terminated June 30, 1886:*

	Star.	Steamboat.
Annual rate of cost of star and steamboat service in above States and Territories on June 30, 1886	$2,183,442 00	$223,298 00
Annual rate of cost of same July 1, 1886	1,945,266 90	172,374 56
Decrease	238,175 10	50,923 44
	50,923 44	
Total decrease in annual rate of cost	289,098 54	

TABLE No. 3.—*Statement of reductions in cost of railroad transportation, not attributable to reweighings, and in the cost of railway postal-car service discontinued from April 1, 1885, to June 30, 1886.*

Transportation:		
Unnecessary service curtailed and discontinued, &c.	$12,950 48	
Deductions made on certain land-grant railroads, not heretofore deducted or treated as land-grant, as required by the th rteenth section of the act of July 12, 1876, and covering the period from July 1, 1876, to June 30, 1886	68,905 28	
Total		$81,855 76

TABLE No. 3.—*Statement of reductions in cost of railroad transportation, &c.*—Continued.

Railway post-office cars:		
Pay heretofore allowed for apartment-car service discontinued, because adjudged that such payments were not warranted by law	$80,161 73	
Regular railway post-office car service discontinued because not necessary	10,500 50	
Total		$90,662 23
Grand total		172,517 99

The principal and most interesting facts shown by this exhibit may be summed up as follows:

In the matter of supplies for the postal service, consisting of postage-stamps, postal cards, envelopes, mail bags and catchers, wrapping-paper, twine, marking-stamps, and stationery, the actual saving in the purchases for the fiscal year ended June 30, 1886, over the cost of like articles at the rates at which they were purchased under contracts for the previous year is $174,222.52—a percentage of 19.7+. On some of the articles the saving is especially conspicuous, being 43.34 per cent. on official envelopes and 39 per cent. on wrapping-paper for the railway-mail service. Some portion of this saving has been due to keener competition, but most of it to the employment of new methods in securing the articles.

The Department has made during the year new contracts for supplies for a period of four years, and has secured very decided advantages by the plan pursued. The table exhibiting results shows a rate of diminished cost which will yield a net saving in four years upon the amounts purchased under these contracts and estimated to be necessary of $1,346,858.08, or at the rate of 19.9 per cent. advantage over the contracts in force during the preceding year.

The housekeeping of the Department, or the expenses of running the Department itself as distinguished from the postal service, also shows advantageous results. In the matter of salaries there has been no special change. But with all the very great increase of work necessarily arising from the change of administration it may be noted that there is a balance of $17,444.50 remaining unexpended out of the appropriation for salaries which was deemed necessary for the year, and which appropriation was estimated for by the preceding administration. The balance at the end of the previous fiscal year remaining unexpended was $6,212.38. This result is more gratifying because the Department work was largely increased by the appointments necessary.

But in every other item of expense for the maintenance of the Department the results are very marked in favor of the last year. The appropriations were the same in almost every particular, with the addition of rent, fuel, light, and other items for the new building, which by the act of March 3, 1885, was directed to be rented, and the provision for foreign postage and free penalty envelopes. There remains an unexpended balance of these other items at the end of the fiscal year of $49,015.09, being a percentage upon the whole appropriation of 35.3 per cent. as contrasted with the unexpended balance at the end of the previous year of but $9,530.90, or 7.45 per cent.

There is also a complete tabular exhibit of the figures of the appropriations, expenses, and unexpended balances of appropriations in all those items set apart for the postal service which are under the control of the Department and not regulated by law, except those for the transportation of the mails, the figures of which can not yet be obtained, as it requires something over three months after the end of the year for the Auditor to make up his accounts of the latter class of expenditures. This exposition furnishes an interesting study. The sum of the contrast between this last year and the twenty years preceding is, however, that the average annual balance of unexpended appropriations of this character during the preceding twenty was 1.6 per cent., while during the last year it has been 6.8 per cent. And the average annual increase of expenditures in successive years of the last twenty years over the preceding year has been 5.5 per cent., while the per cent. of increase in the last year was but 1.7 per cent.

The larger saving in amount has been effected in the matter of the transportation of the mails, where, indeed, the greater expenditures of the service are incurred. This branch has been subjected to constant scrutiny with a view to improvement and economy. The result appears in the fact that the rate of cost for the star, steamboat, and mail-messenger service together has been reduced about $500,000 since the change of administration, over and above what that cost stood, and was contracted to be, at the time the administration began. At the same time new service and additional service have been provided where necessary.

Further savings have been effected by the observance of the law in respect to railway postal cars and by careful application of the law to land-grant railroads, as well as in some other important particulars. It is, however, true that the cost of the transportation of the mails upon the railroads is regulated so largely by law that very little is left for departmental control.

It is interesting to note also that by reason of contracts made only in one contract section of the country, that west of the Mississippi, as shown by table 4, a reduction in the rate of cost, which becomes operative in the current fiscal year, has been effected amounting to over $289,000.

I am able also to make the gratifying statement, derived from an examination of the reports of the Auditor of the Treasury for the Post-Office Department for the first three-quarters of the fiscal year ended June 30, 1886, that the expectation which last year seemed inevitable, that the deficiency in the revenues of the Post-Office Department would be $9,000,000, has been agreeably disappointed. The estimates which were made for the appropriations for the past year, necessarily made upon somewhat insufficient data for accurate statement, submitted the probable expenditures for the year ending June 30, 1886, to be about $56,000,000. Notwithstanding this estimate was corrected by the nearer view of last year in the Department's report, it was still left as high as fifty-three millions, while the revenue could only be estimated at about forty-four millions. The Auditor's reports leave it now reasonably certain that the expenditures will fall below fifty-one millions, while the revenues will hold up to the amount estimated, and the deficiency for the fiscal year, it is confidently expected when the full returns are in, must fall below $7,000,000, a less sum than the deficiency of last year, instead of a greater as was feared.

It is a fair commentary to add in approval of this work of economy and retrenchment that the Post-Office Department has always been looked upon, and deservedly, as one of the best business Departments of the Government, and as one of the most economical in expenditures for the results obtained. With the exception of the star-route scandal of some years ago the Post-Office Department has always been free of suspicion in respect to general honesty and economy with which public moneys were spent through its agency.

Whatever has been done, it must also be borne in mind, has been accomplished in the midst of a very great pressure for change in offices, imposing immense additional labors upon the officers and clerks of the Department.

These results make no account, either, of the saving effected by the resistance of the Department to the granting of unnecessary subsidies for the carrying of the mails by sea.

A careful study of the conduct of this administration in postal matters discloses a marvelous apprehension of its details from the greatest to the smallest, and a fertility of thought abundant in suggestion of corrective measures for defects in the service, supplemented by the readiest and aptest practical execution thereof. A clear purpose to serve the best interests of the country has always manifested itself, and you will look in vain through the past for any conduct of its postal affairs which shall surpass the present. You will but find in it all that could be expected from the highest ability, the most undaunted courage, and the profoundest patriotism.

Money.

REMARKS
OF
HON. JOHN P. JONES,
OF NEVADA,
IN THE SENATE OF THE UNITED STATES,

Thursday, July 29, 1886.

The question before the Senate being the Morrison joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt—

Mr. JONES, of Nevada, said:

Mr. PRESIDENT: Whatever may be asserted in regard to money and its value, every writer of repute on the subject admits that the value of each dollar depends on the number of dollars that are out.

Mr. TELLER. That, I believe, is denied by some of the modern theorists.

Mr. JONES, of Nevada. That may be so, but the conclusions of such theorists are not sustained in the writings of any political economist who has enjoyed any solid and permanent reputation.

The fundamental principle of money is that the value of each unit of money in any country depends absolutely on the number of units of money in circulation in that country, and is not in any manner influenced by the character of the material upon which the money function may be stamped, whether it be gold or silver or iron or anything else. From the time of John Locke the reasoning of all the political economists and philosophers has clearly led up to this rule, whatever their conclusions may have been.

A consideration of the manner in which the value of the dollar—which is the unit of money in this country—is fixed will demonstrate that this position is impregnable. It is universally admitted that all values are regulated by the play against each other of the forces of supply and demand. No reason has ever been or can be given why the regulation of the value of money is not subject to this law. However much variation may arise in the demand for other things, the demand for money is constant, instant, and unchanging. It is equal to the sum of the demands for all other things. All the products of hand and brain are constantly offered in exchange for money, because while any other thing has but limited command over the objects of human desire, the command of money over those objects is unlimited.

The value of each unit of money is fixed by the universal competition to get it, and finds its expression in the general range of prices. Every shoemaker in a given locality is in competition with every other shoemaker in that locality—offering shoes for units of money—and the shoemaker who offers the most and the best shoes for the smallest number of those units fixes the market value of the money unit, or dollar, in shoes. So it is with the hatter and the tailor and the farmer and the iron manufacturer with their respective products, and so it is throughout the entire range of human industries. This competition, in the aggregate, constitutes the demand for money; the number of units of money in circulation constitutes the supply.

The need of money is felt by all. The force of the demand for it is measured by the sacrifice in property and labor offered in exchange for it. Price is the equilibrium between the forces of supply and demand, and is the sole and only expression of the value of money. For example, suppose the circulation of this country at the present time is a thousand million dollars, and the population 60,000,000. Now, if the population—which represents the productive forces of the country—should be increased by any percentage, without, at the same time, a corresponding increase in the money circulation, an addition would have been made to the demand for money, and none to the supply. The equilibrium would therefore be destroyed, and, according to the rule I have laid down, the value of money, under these conditions, must rise and the price of property must decline.

So, on the other hand, if the number of units of money should be increased by any percentage, without a corresponding increase in the population, the result would be a fall in the value of each unit of money, and a rise in the price of property. A shrinking volume of money, relatively to population, destroys, save under exceptional circumstances, all hope of profit in productive enterprises, and, like a poisonous drug, renders sluggish, or dries up, the circulation in the veins of commerce and industry, for the very plain reason that as long as the shrinkage of the volume of money continues, except when spasmodic and short-lived reactions occur, the general range of prices must continue to fall, and the value of money must continue to rise. At such times the plainest business instincts dictate that the purchase of property should be avoided, and the hoarding of money must increase. These are the conditions which are hanging like a pall over the business and industries of the country to-day, and account for the immense amount of idle surplus lying in the banks all over the United States.

It is plain that under these conditions it would take more wares of every description—more of the shoes of the shoemaker, more of the wheat of the farmer, and more of the iron of the iron manufacturer; in fine, more of the products of labor in every department of industry—to get a dollar than it did before.

Under these conditions, Mr. President, suppose you and I had each a million dollars in cash. What would we be likely to do with it? Our intuitions would restrain us from investing in property, whose price was declining. On the contrary, every incentive would exist to induce us either to put it in some place where it would be securely kept until bottom prices were reached, or to invest it in bonds well secured, even at the lowest rate of interest, as we should be recompensed for the lowness of the rate by the increased value that money would bear at the maturity of the bond.

The same course of reasoning which would dissuade us from investing money in property while the volume of money was shrinking and prices declining, would deter bankers from lending and men of enterprise from borrowing it for that purpose, as there would be neither security for the lender nor profit for the borrower.

Under these conditions, which actually exist, the money of the country becomes every day more aggregated and congested in the great centers. At such centers money exists in overabundance, while at the same time it is growing constantly scarcer for the general business of the country, and the prevailing belief is that the shrinkage in the volume of money will continue, and that the tendency of prices must still be downward. I am aware that the bankers, brokers, and business men of the East affect to believe that the danger to the country is that of a depreciation in the value of money and a rise in prices—which are the same thing—and that we are on the brink of what they call a silver "vortex"—a silver "abyss"—into which we are liable at any moment to be plunged. This is what they affect to believe, but acts speak louder than words. The conduct of their business proves that their real belief is just the reverse. If they really believed what they loudly proclaim, that we are rapidly approaching a silver basis, and that our dollars will then be worth only 80 cents, they would conclude that property was on the point of rising in price, and they would make haste to invest in it.

But, instead of buying property, they are every day more and more determined not to touch it, and they so eagerly bid against each other in buying bonds and all classes of money-futures, that it is not property but money-futures that are steadily rising in price. Bonds can not be scaled either up or down; they call for a fixed number of dollars. Nobody will be eager to buy them who believes that dollars are

liable to depreciate in value; and when we see the shrewd bankers of the country determined to buy bonds—national, State, municipal, and railway bonds—and nothing else, we have sure proof that in their opinion money is tending to an increase in value.

The bankers of New York and the Secretary of the Treasury agreed, only a year ago, that we were on the brink of the silver "vortex," and that this Government, notwithstanding the large excess of its exports over its imports, notwithstanding its immense revenues, its unrivaled credit, and its exhaustless resources, stood a helpless, trembling, pitiful wreck, imploring the banks to loan it $6,000,000 in gold in exchange for a like sum in subsidiary coin which it still had left. We are told that the banks, inspired by benevolence and patriotism, came forward and saved us from being precipitated upon a silver standard depreciated 20 per cent. Verily, we should all be grateful!

It is instructive to note how these bankers and their customers acted while passing through what they and the Secretary of the Treasury declared to be a "great crisis," and how they acted afterward. It would be natural to suppose that they would have availed themselves of the few months' respite from a great "calamity" (a respite procured by swapping six millions of one kind of money for six millions of another kind) to unload their bonds and money-futures generally, which according to their view were soon to be liquidated in money 20 per cent. depreciated, and to make investments in property, which was sure to advance correspondingly, for it must always be borne in mind that "depreciation of money" and "advancing prices" are interconvertible terms.

To say that money has depreciated in value is only another mode of saying that the prices of property have advanced, and *vice versa*. It is an absurdity to suppose that money can depreciate relatively to property without a simultaneous appreciation of property relatively to money. If money measures property, so, equally, property measures money. The value of money is measured by property and labor, and they are the only measures it can have. "Rising prices" and "depreciating money" are therefore synonymous terms; to say the one thing is to say the other.

Surprising as it may seem, however, the preference of the bankers and their customers for bonds throughout the "crisis" and afterward was more manifest than ever.

Bonds and money-futures continued to advance in price, while property continued to decline. These things could not possibly have happened if the pretended apprehension of a depreciated silver standard had been real. They did happen because this apprehension was not real—because it was nothing but the prelude to an attempt on the part of the bondholding classes to frighten Congress into the passage of a law stopping the coinage of silver. If men had feared the approach of a depreciated silver basis, they would, without hesitation, have withdrawn their money from bonds and invested it in property. The "crisis" business seems to be the "harp of a thousand strings." We have heard it ever since silver was remonetized in 1878, and it is not improbable that we shall hear it again just before the meeting of the next Congress. It is possible that the first note may be sounded by the bankers' convention shortly to meet.

The business of the Western world is based on gold and silver, and it is plain that the arts—such as dentistry, gold and silver plate, jewelry, and articles of adornment generally—are reducing the money of the world by encroaching upon the quantity of those metals. This must create a continuing shrinkage in the volume of money, which, as I have shown, discourages investment in property, and discourages also the employment of the labor that produces property. Who cares to build a factory when he is quite sure that the necessary buildings and plant can be obtained for less money twelve months hence than they can be now? Laborers are remitted to idleness; business is conducted without profit; the burden of debt and of taxes is increased; stagnation everywhere prevails.

I maintain that the money standard of a country, to be just and honest, must bear a steady numerical relation to the population of the country. It is not necessary that the "standard" should be made of gold or of silver or of any other particular material, although gold and silver are admittedly the best media for barter money. It is only important that whatever may be the number of units in circulation in any country, they shall bear an unchanging relation to the numbers of the population; in other words, that a given number of units having been adjusted to the population, they shall only increase or decrease according to the increase or the diminution of that population. Nor is it of consequence how many units of money you start with in the country before any relation of debtor and creditor has been established. Were there no time contracts, a change in the volume or value of money would have but little significance.

But when time contracts for the delivery of money have been adjusted on the basis of an existing number of money units, the equities of the contracts can only be maintained by maintaining that number of units, if the population remains stationary, and by increasing or decreasing the number of units in proportion to the increase or decrease of the population. It will be admitted without question as being generally true, that if the population is increased 5 per cent. there will be required 5 per cent. more wheat, 5 per cent. more shoes, 5 per cent. more houses, 5 per cent more of everything that enters into consumption and use; and why not 5 per cent. more money, as it is through a demand first made upon money that all these things must be obtained? If the volume of money remains stationary, the increased business can only be done through the medium of lower prices, as the same number of dollars must serve all the demands of the larger community that in the first instance were only sufficient to serve the demands of the smaller, and, to the extent of the fall in prices the equities between debtor and creditor would be violated.

It is no wonder that we have had strikes among workmen. The debts of the world amount in round numbers to $70,000,000,000; the annual interest to more than $3,000,000,000. It is admitted that the purchasing power of money has increased fully 20 per cent. in the last fifteen years, which gives an unearned increment to the fund holders of the world of $14,000,000,000, besides a corresponding increase in the current interest, all of which must be exacted from the current earnings of labor. This increase in the value of money is portentous for the future, and has been brought about by a shrinkage in the volume of money, occasioned partly by the diminishing supply of gold from the mines and partly by the demonetization of silver.

The full measure of debts is the money price of the products of human labor. This fact reveals the real motive of the conspirators who, for the last twenty years, have persistently endeavored to demonetize silver and paper money, and who have strenuously resisted every proposition that looked toward maintaining the volume of money or increasing it *pari passu* with the increasing demand for it. The strikes of the workmen should be directed not against the railroad companies, but against the bondholders, the annuitants, and the income classes of the world, who, mainly by the demonetization of silver, have thus been enabled enormously to increase their own wealth at the expense of the producers of the world. The income classes struck fifteen years ago for increased incomes. Is it any wonder that the laborers now strike for increased wages to meet this unjust demand—this villainous change in the contract after the contract was made?

Mr. HOAR. I should like to ask the Senator if he thinks the weight of the debt is not diminished by the reduction of the rate of interest from 10 or 12 per cent. to 3?

Mr. JONES, of Nevada. When the rate of interest falls, as a consequence of a decline in prices and of depression in business, and because there are few borrowers and many lenders, although the lender makes an apparent loss by receiving less interest, he is recouped by the increased value of the money in which the loan is paid; and the borrower receives no advantage from obtaining his loan at a less rate. Indeed, with a continued shrinkage in the volume and an increase in the value of money, the borrower is fortunate if he escapes with his capital unimpaired; for, whatever rate of interest he pays, the tendency at such times is to lower rates, of which his keen competitor takes advantage.

In all periods of the history of the world, when the volume of money has been increasing and the price of property going up borrowers have found it easier to pay high rates of interest than to pay much lower rates when the price of property was declining.

With a proper volume of money, the rates of interest express approximately the average profit that can be made upon the use of capital well directed, and borrowers, especially in comparatively new and undeveloped countries, like our own, ought to be able to pay more than double the current rates for the use of money, and with profit to themselves.

But there has been no such fall in the rate of interest to borrowers upon lands and productive enterprises as the Senator from Massachusetts seems to suppose. Three per cent. upon current loans is, as a general fact, merely a rate among bankers, upon undoubted collateral and on call. The average rate throughout the country is to-day more than twice that.

Mr. HOAR. My honorable friend thinks that the weight of a debt is not decreased by reducing the rate of interest from 10 per cent. to 3.

Mr. JONES, of Nevada. Of what advantage is it to the borrower to get money at 3 per cent. instead of 10 if the value of the money in which the debt must be paid increases by more than the difference between the 3 per cent. and the 10? Upon the great mass of the debts of the world, however, there has been no such reduction of interest as is implied in the suggestion of the Senator from Massachusetts [Mr. HOAR]. Upon but few of the national debts of the world has there been any reduction of interest whatever. Neither has there been any reduction in the rate of interest on the great mass of railroad bonds, most of which were placed originally on very long terms. There has been no reduction in the rate of interest on the debt of England within twenty years, excepting on a fraction of it, not exceeding one-seventieth.

Within the same period there has been no reduction in the rate of interest on the French debt, nor on the Egyptian debt, nor on the debt of India, nor on that of many countries which I could name. The interest on the greater portion of our bonded debt can not be reduced for twenty-one years to come. Substantially all the reduction that has been obtained in the rate of interest has been in the case of current loans, in respect of which, as a consequence of the utter stagnation of business, the borrower finds it as hard to pay the present rates of interest as it

was a few years ago to pay the higher rates. The amount of sweat and toil that it takes to earn a gold dollar to-day is considerably more than was required some years ago. On capital now borrowed and employed in productive enterprises less interest is exacted, but it also earns less than before.

Low and lowering rates of interest, instead of indicating increased credit or prosperity, are the sure gauge and measure of increasing prostration. It is a moderate estimate that, on account of the universal depression that prevails, a million of men in this country who are willing to work are remitted to idleness at an annual loss to the country of $312,000,000, even if their wages be rated at only $1 per day. This sum so lost through the baneful influence of a dishonest system of money is equivalent to 6 per cent. interest on $5,200,000,000. Many more calculations of a similar character might be made which would demonstrate beyond cavil that the financial system under which a reduction in the rates of interest has been brought about has entailed an enormous loss upon the country.

Mr. ALDRICH. Will it interrupt the Senator if I ask him a question?

Mr. JONES, of Nevada. Not in the least.

Mr. ALDRICH. The Senator has depicted in very eloquent terms the troubles and sufferings which follow a shrinking volume of money. Now, I want to ask him to explain what will be the effect on the volume of money of the Morrison resolution under existing law?

Mr. JONES, of Nevada. I did not rise to deliver a set speech, and interruptions, therefore, cause me no inconvenience.

It is quite probable that the country is now placed between the horns of a dilemma. This has been brought about by what I regard as two fundamental errors which are at the basis of our banking system. One of those errors is the idea that the money of a country should be based upon its debt, and the other is that private banking institutions should be permitted to increase or decrease the volume of money, and consequently its value, at the dictation of their own interests or caprices.

The regulation of the volume and value of money is one of the highest functions of sovereignty and should under no circumstances be surrendered; and no country should be subjected to the penalty of paying a large yearly interest on debt in order that it may have a sufficient quantity of money to exchange the products of labor and maintain the equity between debtor and creditor. The trouble now seems to be that the surplus revenues of the country are increasing in the national Treasury, thus rapidly diminishing the volume of money in circulation and threatening serious financial disaster unless the money be soon restored to the channels of circulation. Unfortunately under our present laws there is no legitimate means by which this can be done except by redeeming the 3 per cent. bonds, which are now subject to call, amounting to about $140,000,000.

The present system must end in disaster unless Congress is wise enough to provide in some proper manner for the issue of a quantity of money at least equal to the amount of bank notes retired.

The Senator from Ohio [Mr. SHERMAN] maintained that the pending resolution, if adopted, instead of increasing would diminish the volume of money, entailing all the disasters incident to contraction. I admit that the volume of money in the country would be decreased to the extent to which bank notes were retired, but I deny that the volume of money in actual circulation would be decreased by the passage of the pending resolution. On the contrary, the passage of the resolution would considerably increase the volume of money in circulation. The gold and silver held in reserve and locked up in the Treasury might as well be still in the adamantine rock from which they were extracted so far as their influence upon business or prices is concerned. And this is equally true of all paper money permanently held in the Treasury for that or any other purpose.

The Treasury statement made yesterday (July 28) shows that the national banks then held as a basis of circulation $106,000,000 of the $140,000,000 of 3 per cent. bonds still bearing interest. One hundred and thirty-two million dollars of the total $140,000,000 have not been called; and calls maturing on August 1 and September 1 have been made for $8,000,000. Of the $106,000,000 held by the banks there are $22,000,000 (accurately $21,996,700) which when called must be replaced by other bonds in order that the amount of bonds held by the banks concerned may not fall below the mimimum fixed by law. It is, therefore, correctly assumed at the Treasury that the $22,000,000 of threes will be replaced by fours, four-and-a-halfs, and currency sixes.

The banks have now on deposit as security for circulation $106,000,000 in threes, but $22,000,000 of those will be replaced by other bonds; so that when the whole $140,000,000 are called the bank deposit of bonds will be reduced $84,000,000, on which the banks have a circulation of 90 per cent., or $75,600,000. To that extent there will undoubtedly be a contraction of the currency in existence; but it is clear that the operation as a whole adds $84,400,000 to the currency which is or can be in actual circulation under present modes of Treasury administration.

In paying off $140,000,000 of the 3 per cent. bonds the Treasury disgorges to the outside public $84,400,000 in cash, and transfers, inside of the Treasury, $75,600,000 to the account of banks reducing or retiring circulation. This transfer of money to a different account constitutes the whole of the so-called contraction of currency with which it is attempted to terrify Congress and the country. This operation does not, either first or last, reduce by a single dollar the volume of money which the people are now using, or can get an opportunity to use, or which exerts any influence whatever on prices.

On the contrary it increases the effective circulation by $84,400,000, although it reduces the non-effective portion of the money in existence by $75,600,000. The responsibility for the reduction of the volume of money consequent upon the debt-paying policy which the country approves, and which is one of the brightest glories of the Republic, does not in any degree rest with me, nor with those with whom I agree and act upon currency questions. This result of paying the debt was long foreseen and should have been provided for. Two years ago, when the bill relating to banks, known as the McPherson bill, was pending in this Chamber, I was one of fourteen Senators who contended and voted in vain for a provision that as fast and as far as the national-bank issues were withdrawn their place should be supplied by greenbacks. I will vote again on any bill and on any day for that provision, and the responsibility for the failure to obtain that most just and wise amendment to existing law will always rest, as it rests now, mainly upon the party which favors the gold standard, which favors the retirement of the greenback, and which opposes the continued coinage of silver; and for all the evils which follow contraction the country will hold them and them alone responsible.

Mr. ALDRICH. The practical operation is just this, according to my notion. One hundred and thirty-six million dollars of 3 per cent. bonds are outstanding, of which $106,000,000 are held by national banks as security for circulation. These bonds are called. It becomes the duty of the banks at once, or at the expiration of the call, to deposit legal-tender notes in the Treasury of the United States to the full extent of the circulation.

Mr. JONES, of Nevada. I have just stated that.

Mr. ALDRICH. And that of course is a reduction of the circulation and a reduction of the currency to that extent.

Mr. JONES, of Nevada. But at the same time the $140,000,000 paid by the Treasury for the bonds are put into circulation, which is an expansion of the effective currency to that extent. A bank with $100,000 of bonds, giving it $90,000 in circulation, being forced to retire its circulation under the operation of this Morrison resolution, deposits $90,000 of money with the Treasurer to redeem its issues. That is a contraction to the amount of $90,000. But, on the other hand, the Treasury pays $100,000 out for the bonds, and puts in circulation $100,000 now held fast in the Treasury and not in circulation; so that, taking the whole operation together, there is an expansion of the effective circulation to the amount of $10,000.

Mr. CHACE. You are not through yet. What becomes of the bank circulation?

Mr. JONES, of Nevada. The bank currency, of course, is still in circulation, and whenever any portion of it finds its way into the Treasury an equal amount of the money specially deposited for its redemption goes out. I will add here that there is a small additional expansion of the circulation from the surrender to the banks of 5 per cent. which they are required to keep on deposit in the Treasury for the redemption of their issues.

Mr. ALDRICH. Let me follow that one step further. The amount of legal-tender notes is restricted by law to $346,000,000. A bank brings its bonds to the amount of $100,000 to the Treasury and receives $100,000 in legal-tender notes. Of course that is not an increase in the circulation of the country. If that bank brings its bonds to the Treasury and receives in pay for them $100,000 in legal-tender notes there is no increase of currency by that operation. The bank takes $90,000 of that money and deposits it in the Treasury for the outstanding circulation. There is no increase of circulation in that operation. When these national-bank notes come in they are redeemed by the Treasury Department and destroyed under the provisions of law. There is a contraction of $90,000. That is the proposition I make that I should like the Senator to answer.

Mr. JONES, of Nevada. That is one of the evil and inevitable consequences of building a superstructure of currency upon a basis of debt. It was "bad begun, and worse remains behind." The national banking system was a temporary expedient, adopted to meet a great emergency and as a sort of auxiliary to the greenbacks. An equal issue of greenbacks would have served fully as well, and at a much less expense to the country, for with the issue of greenbacks the interest-bearing debt on which the bank notes were based could have been retired, which by this time would have proved a saving to the country of several hundred millions of dollars.

Mr. ALDRICH. It is a question of fact between the Senator and myself.

Mr. JONES, of Nevada. I have stated, and I repeat, that in the case of a national bank surrendering $90,000 of its circulation and receiving $100,000 for its bonds, there is $10,000 added to the effective circulation of the country. The idle hoard in the Treasury may be dimin-

ished, and might as well be diminished if the avowed policy of the Treasury Department is to be continued, and especially if that policy is to be indorsed by the defeat of the Morrison resolution.

Mr. ALDRICH. We were talking about the volume of money, whether in banks or in the Treasury or anywhere else.

Mr. JONES, of Nevada. That is what the Senator from Rhode Island has been talking about; but I have carefully drawn the distinction between money in circulation, performing its legitimate function, and money permanently locked up in vaults and performing no useful function whatever.

The Senator from Rhode Island [Mr. ALDRICH] seems to be opposed to paying off any of the debt, for the reason that a contraction of the national-bank notes would be the result. He sees that the banking system is approaching its doom, and in order to prolong its existence even for a short period the Senator is willing that the people of this country shall continue to pay interest on matured bonds while vast sums lie idle in the Treasury with which they might be extinguished.

Mr. GEORGE. I wish to call the attention of the Senator from Nevada [Mr. JONES] to this question. I see the evils which he has depicted in such eloquent language of the locking up of these large sums by the banks. I ask him if he has any feasible plan by which he can force the banks who hold this money hoarded up to put it in circulation. I put that question a while ago to the Senator from Colorado [Mr. TELLER], and he answered me very promptly that he had no such plan. The Senator from Nevada [Mr. JONES] then said that he would answer that question. I should like to call the Senator's attention to that and ask him for an answer.

Mr. JONES, of Nevada. The question of the Senator can not be answered in a single sentence. That we may be sure of the proper remedy it is first necessary to diagnose the complaint; after which I will attempt to indicate the policy through which the idle hoards in the banks will be speedily absorbed into the circulation.

Mr. GEORGE. That is what I want to hear.

Mr. JONES, of Nevada. Money is, or should be, the instrument of commerce and not its object. Its use throughout the whole range of human industries should command a fair rate of interest with profit to both borrower and lender. Every instinct of thrift impels the owner of money to invest it in property or industrial enterprises, or to loan it to others for that purpose when it can be done with security; and he would thus loan it or use it and put it in circulation, if he could do so safely, even with small profits, but it is now piled up in idle hoards because bitter experience has taught that there is but small hope of profit in investments. The reason is plain. Whatever is becoming scarcer, relatively to the demand for it, is growing dearer. This rule applies to money as well as to anything else; and at the present time money is growing scarcer and consequently dearer, while the productive forces are enlarging, and the products of labor, measured by the shrinking medium, are growing cheaper and cheaper. The same instincts which impel the active use of capital and credit when prices are rising, impel the hoarding of money when prices are falling.

The complaint of falling prices and of the absence of profit in business comes to us from every country in the western world. The disease is universal, and it is logical to assume that it proceeds from the same cause, which must also be universal; and no other cause than the one I have named has been or can be pointed out. When we compare the present period of distrust, depression, and stagnation with former periods of activity, confidence, and progression, we find all the elements of prosperity—intellectual, material, and moral—greater now than ever before. The sun is as genial and fructifying, the rains as frequently recurring, the soil as fertile, the Government more just and more stable than any ever yet founded, and the people, constantly increasing in intellectual and moral force, are as ingenious, industrious, and enterprising as they ever were.

Why, then, do not all these favorable conditions bring about good times? Every condition of prosperity is present now that has been present in periods of the greatest prosperity in the past—save only one, and that one baleful condition has attended every period of industrial and financial disaster of which we have any record. It is not a hard condition, imposed by Nature, but it is one which, in my judgment, is chargeable to our own lack of wisdom. That condition is brought about by a decrease in the volume, and a consequent increase in the value, of the units of money, involving a violation of all contracts—the subtle robbery of the debtor for the benefit of his creditor, the despoiling of labor, an increase in the burden of debt and taxes, and the withdrawal of money—that great instrument of association among men—from the performance of the beneficent functions for which it is intended.

For this evil there is but one remedy. Reverse that condition. Enact a law under which the volume of money shall keep pace with the increase of the population, for it is population, and population alone, that gives rise to a demand for money. The increase or decrease of population is the only gauge and measure for the increase or decrease of the units of money. Do this, and the idle hoards in the banks will disappear as if by magic. They will become again charged with their true functions of exchanging property and the products of industry, and of truly expressing the equity of contracts. In the presence of this great depression, caused by falling prices, and of the cloud which hangs like a pall over the business and industry of the world, to waste time in the discussion of the material out of which these units of money should be made is to fiddle while Rome is burning.

As population increases all the objects of human desire must be increased in proportion, if the equation between supply and demand is to be maintained undisturbed. Schoolmen and political economists except money from the operations of this rule; indeed the general tendency of thought is in the same direction. But a little reflection will show that the rule is more strictly and exactly applicable to money than to anything else, because the demand for all other things is first made upon money. The tastes and habits of the people may change as to particular things; even in a single year the demand for any one article may become less and the demand for some alternative article may be increased; and it is to be observed that for everything except money some more or less available substitute can be found. If beef be too high in price the alternative can be found in mutton. If wool be too high we can use silk or cotton. There is no article in this world except money for which an alternative article can not be found, but there is no alternative for money.

Indeed, the prices of other articles may rise so high as to forbid the use of, and terminate the demand for, them altogether, in which case the entire demand falls upon the alternatives; but no matter how high the value of money may rise the demand for it is as strong as ever. The people must have it. Through the warp and woof of society runs this factor—money. It is with money alone that debts and taxes can be paid and judgments satisfied. It is indispensable to civilization, and it can be obtained only through universal competition, each in his own pursuit offering his wares in competition with all others in the same pursuit in exchange for it. This is the gauge that measures the value of money and the demand for it.

I do not intend at this time to enter upon an elaborate discussion of the money question; but I know that in the near future such are the inherent defects of the present system—it must be discussed, and Congress must bring to that discussion its highest wisdom and its closest attention. Great emergencies stand before the country to-day—emergencies greater, in my judgment, than it has ever been confronted with in the past. Unless the facts of the present situation can in some way be changed nothing is to be looked for but a steadily shrinking volume and a constantly increasing value of money, which have in past times subjected mankind to more misery than has ever resulted from war or pestilence or famine.

Mr. ALDRICH. Mr. President——

The PRESIDENT *pro tempore*. The Senator from Colorado [Mr. TELLER] is entitled to the floor.

Mr. ALDRICH. If the Senator will listen to me——

Mr. JONES, of Nevada. I will get through in a few minutes.

Mr. ALDRICH. I want to say just one word in reply to what the Senator has said in regard to my opinion about the payment of the national debt. He said I was opposed to paying the debt. He is entirely wrong in making that statement. I am just as much in favor of paying the national debt as is the Senator from Nevada, but I want the Senate to understand, and I want the Senator from Nevada to admit and the Senator from Kansas to admit the necessarily legitimate consequences of paying the debt at this time and under existing laws.

But to continue the operation we were discussing. You have $100,000 in legal-tender notes and $90,000 in national-bank notes. At the end of the operation you have $100,000 of United States notes and no national-bank circulation. There is $90,000 gone. So the result of that operation is that at every call of bonds you contract the currency. And I say to the Senator from Nevada and the Senator from Kansas that they propose to destroy the national-bank circulation without furnishing anything in place of it. Without furnishing to the country any currency of any kind in place of it; they are doing the very thing that the Senator deprecates so much—diminishing the volume of money.

Mr. TELLER. I will claim the floor if every Senator is to make a speech.

The PRESIDENT *pro tempore*. The Senator from Colorado claims the floor.

Mr. TELLER. I will do so if everybody is, under the guise of asking a question, to make a speech. I do not object to the Senator from Nevada proceeding.

Mr. JONES, of Nevada. The Senator from Rhode Island [Mr. ALDRICH] assures us that he is in favor of paying the debt, but he says that the evils (which I have but too feebly portrayed), caused by contraction, will be intensified by the adoption of the resolution now under discussion. He therefore opposes it until some measures of relief are adopted, and he accuses the Senator from Colorado [Mr. TELLER] and myself of being in favor of contraction while we have proposed nothing to avert it. The plain—indeed, the only—method to prevent contraction is to increase the volume of money, not indefinitely, but proportioned to the increasing demands for it. What the people want is money, not specifically gold money, or silver money, or paper money, or any other particular kind of money. They want simply money in sufficient volume to maintain the general range of prices undisturbed—

they want a legal tender for the payment of debts, that will exchange the products of industry, and that will satisfy judgments and keep the red flag of the sheriff from the window.

The Senator from Colorado [Mr. TELLER] and myself for many years in this body have done everything in our power to provide a money to supplement the shrinkage of national-bank notes, which everybody foresaw, and the shrinkage of the supply of gold, which everybody sees, and we were at least partly instrumental by our votes and our voices in securing the passage of a law which commanded the Secretary of the Treasury in his discretion to coin each month not less than $2,000,000 nor more than $4,000,000 worth of silver. If the Secretary will exercise that discretion, and, as fast as the national-bank notes are retired, will coin silver up to the maximum which he is permitted by law to coin, no evils of contraction will be felt. We have provided ample remedy for the contraction of the circulation of bank notes by the passage of the silver law of 1878.

The Senator from Ohio [Mr. SHERMAN] has declared in this debate that the continued coinage of silver must result in the expulsion of gold from the country; but he does not specifically explain the operation, nor give the causes for its exportation.

The same predictions were as confidently made before and at the time of the passage of what is known as the Bland bill in 1878. We were then warned by the magnates in finance, the bondholders and the bankers in the great cities, and by the professional political economists all over the country, that the immediate effect of the passage of the Bland bill would be the exportation of what gold there was in the country, with a premium on it equal to the difference between $1.18 an ounce, the price of silver bullion at that time, and $1.29 an ounce, the value of the standard dollar at the legal relation of 16 of silver to 1 of gold. The financial press of Great Britain, where many of our bonds were held, echoed these notes of warning. But all the prophecies were falsified by the event. Gold not only persistently refused to leave the country, but on the contrary came to us in a constantly increasing stream and still continues to come. The zeal of these "sons of the prophets," however, has not been restrained by this failure of their predictions; and every year since then they have joined in chorus in the same doleful jeremiad, which only goes to show that the instinct of the masses of the people that demanded the passage of the bill, and saw no danger in it, was keener than the blurred vision of the prophets.

It is very difficult to make an argument against a prophecy. I will not, therefore, weary the Senate with an attempt to answer these many and various unfulfilled predictions. They will doubtless continue, and with additions, for "age can not wither nor custom stale" their "infinite variety."

There has never been a day since the passage of the Bland bill that the silver dollar coined under its provisions would not buy of labor or the products of labor as much as the gold dollar, notwithstanding the strenuous efforts of the income classes to discredit and depreciate it. And so far the silver dollar has shown no sign of attacking or driving out the gold dollar. There is no chemical repulsion between them. If gold goes out of the country it will be because it is to the real or fancied interest of its owner that it should go.

I admit that when there are two kinds of money circulating in a country, as, for instance, gold and silver in this country, both equally a legal tender, the one international and the other national, it is quite possible to coin, or print, and put in circulation so great a quantity of national money as to advance the prices of things internationally dealt in to a point beyond and higher than the gold prices of the same things in foreign countries—in which case the international money, having no greater purchasing power here than national money but possessing a higher purchasing power abroad, might be sent out more advantageously to meet foreign purchases than any other commodity. But the outflow would necessarily be slow—national and international prices under such circumstances being near an equilibrium, and, through the outflow of gold, constantly tending toward it.

It is only under these circumstances, and in no greater amount than would be sufficient to pay the balance that might be against us, that gold, our international money, could flow out. But gold could never bear a premium over silver till substantially the last dollar in gold had disappeared from our circulation. If, however, notwithstanding the rise of prices in this country, the coinage or the issuance of national money should be persisted in indefinitely, gold would continue to go, until all of it would finally disappear, and the rapidity of the outflow would depend entirely upon the amount of the excess of our imports over our exports and on the rapidity of the increase of the national currency.

There is no reason, however, to apprehend that there will be an outflow of gold from this country by reason of the coinage of silver under the Bland law, or under any other law which Congress will be likely to enact. If gold goes out it will not be because of a depreciation in the value of silver dollars, but because of a destructive rise in the value of gold. This rise is portentous of disaster, and has aroused the attention of thoughtful men everywhere. In a very able article in the May number of the Contemporary Review, by that distinguished political economist, de Laveleye—an article republished in the Bankers' Magazine, of New York—it was demonstrated beyond question that the value of gold is rising; and he pointed out with unerring accuracy that the present depression in trade throughout the civilized world is to be attributed to that fact and to that fact alone.

An able article appeared also in the January number of the Edinburgh Review, establishing the same fact and reaching the same conclusion. Frewen, Gibbs, and Grenfell (the last-named two gentlemen being ex-governors of the Bank of England), and many other distinguished publicists, both in Great Britain and on the continent, have made numerous and valuable contributions to the literature of the subject in the same general direction. I recommend their careful perusal to those who, here or elsewhere, have hitherto regarded gold as the only just standard by which to measure the equities and efforts of mankind.

Notwithstanding the coinage of nearly two hundred and fifty million of silver dollars in this country, contemptuously referred to in many quarters as depreciated and depreciating "buzzard" dollars, any one of those dollars has as much purchasing power to-day as had the first dollar that was coined.

Mr. TELLER. More.

Mr. JONES, of Nevada. It has greater purchasing power than had the first dollar that was coined. The laborer will give more sweat and toil for it, the farmer will give more wheat for it, the sugar-planter will give more sugar and the cotton-planter more cotton for it than ever before. In what other way can its value be measured? How, then, can it be called "depreciated?" An ounce of uncoined silver bullion, whose gold price is now lower than was ever before known, will buy more of any and every kind of property on sale, including human labor, than it would buy when the bullion value of the silver dollar was 3 per cent. greater than the bullion value of the gold dollar. Are not these facts, which can be verified by innumerable illustrations, to be taken as conclusive evidence that silver has not depreciated, but that the value of gold has been and is continually and destructively advancing?

If gold goes out of the country it will be because of its continuous rise in value and not on account of the coinage of silver or the depreciation of the silver dollar. Is it contended that we should continue to maintain gold as a money standard at the expense of falling prices, of the increased burden of debt and taxes, of the stagnation of all industries, of the disturbance of all contracts, and of the relegation of constantly increasing numbers of workmen to idleness? Mr. President, if gold does go out of this country by reason of a constant increase in its value I say let it go, and God speed the day when it starts. Its going will be the harbinger of more prosperous days. It will leave the country free to adopt a system of money whose volume and value will be regulated, not as the value of gold is now regulated, by the edicts of blind chance, but by the guidance of human wisdom. I am sorry to believe that there is a class in the country who through ignorance or sinister motive would rather retain their idol—gold—with shrinking prices and shriveling industries than to have it supplanted by any other kind of money with prosperity, with plenty on the tables of the laborer and with profitable employment for all. Let it go, say I, let it not stand on the order of its going, but go quickly, if the reason for its going be the continued rise in its value—and for no other reason than that can it go.

The enormous loss inflicted on this country by the increase which has taken place in the value of money since the war was tersely stated by the Senator from Kentucky [Mr. BECK] in a speech a few days ago in this Chamber. I repeat it substantially here. At the close of the civil war the national debt was about $2,800,000,000, of which we have since paid $1,000,000,000 of the principal, and as much as $2,000,000,000 in interest; and yet it will cost more sweat and toil, it will take more of the products of our labor to pay what remains due than it would have required to pay the whole debt when the war closed. This is a startling exhibit, and the only circumstance that relieves the situation is the fact that there are now 50 per cent. more tax-payers to share the burden than there were then. This is a spoliation of debtors on a vast scale, which would be more than ten times greater if the debts of States, municipalities, corporations, and individuals were embraced in this calculation. And the silver dollar is flippantly referred to as the "clipped" silver dollar. When that dollar was worth 3 per cent. more than the gold dollar, wheat was worth 30 per cent. more than it is now; and the prices of iron, cotton, sugar, and all other products of our industry were higher in the same proportion. Instead of the silver dollar being clipped, it would rather seem as if some baneful influence had been "clipping" the price of wheat and of cotton and of iron, and thus "clipping" the debt-paying and tax-paying power of our industries.

The advocates of what is called the "gold standard" maintain that gold is better fitted to perform the money function than any other thing in the world, on account of the steady intrinsic value which it is claimed to bear. It might be considered presumption in me—a rural financier—to attempt a scientific definition of economic words and phrases, but I venture the statement, without discussing it, that a more senseless, vague, and unmeaning phrase than "intrinsic value" was never used in economic discussion. MacLeod, a great financial writer, in a recent work, demonstrates that the phrase is meaningless, and Ruskin declares, in substance, that he has no patience to discuss the money question with any one who has not advanced far enough in economic studies to discard it.

Every article useful to mankind, save and except money, possesses

estimable intrinsic qualities; but there is a broad distinction between the quality and the value of an article. Quality resides in the article; value resides in the human mind. It is the mental estimation or appreciation which is placed upon desirable objects. This is value in use; and the only difference between it and value in exchange is that the article estimated shall be limited in quantity so that a sacrifice is required to obtain it. Value may differ in degree but not in kind. The estimation placed upon articles possessing useful intrinsic qualities does not differ in kind from the estimation placed upon articles whose qualities are extrinsic, as is the case with money. To be concise, and not wishing to elaborate on this important definition at this time, I should say that mental estimation, utility, and limitation of quantity of the thing estimated are all that is embraced in the definition of the words "value in exchange." The estimation placed upon money does not find its origin in the intrinsic qualities of the thing upon which the money function may be conferred, but arises solely and exclusively out of the extrinsic qualities and functions which the Government confers upon it; and the value of the unit of money, whatever may be its material, is governed absolutely and entirely by the number of units in circulation, neither changed nor affected in the slightest degree by the commodity qualities of the material upon which the stamp may be placed.

It may be urged, when gold is used as money, that the money-demand is re-enforced by the demand for the commodity for use in the various arts; and that, being thus re-enforced, its value would be more stable than if it rested on the money-demand alone. But it must be remembered that any other article than gold, endowed with the money function, would be subject, equally with gold, to the entire money demand, which would equally include the demand for gold for commodity and other uses. In other words, the entire demands of society must first fall upon money, with which to satisfy them, and it is quite evident that those demands are neither increased nor diminished by the character of the money, whether it be gold, silver, paper, or anything else. Even if it be admitted that the commodity-demand for gold assists in maintaining the value of gold when used as money, it may be instructive to examine the relative characters of these two demands.

The demands for gold as a commodity are few and unimportant. The demands for gold as money are equal to the sum of the demands for all things, as it is through money that all the objects of human desire must be obtained. And in addition to this, there is an enforced demand for it for the purpose of liquidating debt and paying taxes. The use of gold as a commodity is of but the slightest importance to mankind, and could be readily discarded without producing any save the smallest disturbance. The use of money is of transcendent importance; it could not be discarded with safety to civilization, and the demand for it in civilized life is absolutely imperative. Without it our whole industrial, political, and social systems would crumble. And yet it is claimed by the professional political economist that when gold is used as money the utterly insignificant commodity demand—the bangle and breast-pin demand—instead of the nobler, the higher, the universal money demand—is the main factor in fixing and maintaining its value. An examination of these two demands will demonstrate beyond question that the force of the commodity demand, relatively, is as insignificant as its character.

It is estimated that at the lowest calculation there are $4,000,000,000 of gold in use and demand as money in the world and that as a minimum each dollar of this sum is earned, demanded, and paid twenty times in the course of a year. This makes a total of twenty times $4,000,000,000, amounting to $80,000,000,000 annually of money demand upon the gold supply. It is estimated that the amount of gold used in the arts each year is $80,000,000, which measures the annual commodity demand. This shows that the money demand is one thousand times greater than the commodity demand. The absurdity of the claim that the demand for gold as a commodity exerts any appreciable influence upon the value of gold money is further emphasized by the fact, that the supply of gold is equal to fifty years of the annual commodity demand, and still the doctrinaires persistently declare that the value of gold used as money finds its chief support in this insignificant bangle and breast-pin demand!

Mr. President, it is easy to discern that various as are the objections urged against the passage of the pending resolution, the real objection of the majority of those who oppose it is that its passage will hasten the time when the Secretary of the Treasury may have to pay out silver dollars in liquidation of bonds which may be called; and they claim, although these bonds are by law made payable in silver dollars as well as in gold dollars, at the option of the Government, that that act would not only discredit the Government but would precipitate us upon a silver basis. The resulting disasters which they predict are bewildering in their inconsistency. In one breath it is claimed that it is impossible to force any more silver into circulation; that the Secretary of the Treasury and the other financial officers of the Government have made frantic and fruitless efforts in this direction, and have finally given up the attempt in despair. In the next breath it is said that silver has changed its mind and now threatens to gorge and choke up all the channels of circulation to the exclusion of gold. Again, it is claimed that the moment the silver basis is reached the money of the country will be worth 20 per cent. less than it is now, which will enable the debtor to defraud his creditor to that extent; and the creditors are pathetically described as consisting mainly of impoverished widows and orphans and small depositors in savings-banks!

The next disaster predicted is the loss of all our gold and a terrible contraction of the currency, which can mean nothing else than falling prices and the defrauding not of creditors, but of debtors. This destruction of debtors and laborers was referred to by President Cleveland in his famous letter to Democratic members of the House of Representatives in February, 1885, as "the saddest of all" the miseries which he felt were surely impending through contraction brought about by silver inflation! These evil consequences which it is predicted will follow the continued coinage of silver are as contradictory as they are absurd and impossible. After this, it would not be matter of surprise if the discovery were made that the box which Jupiter gave to Pandora contained nothing but silver dollars!

We are warned that it is in the power of a few New York bankers to "corner" gold by locking it up or investing it in sterling exchange. Suppose they do it; what are they going to do with the gold after they have cornered it? Nobody that I know of is obliged to have it, and so far as the public and the Government and the business interests of the country are concerned these little "Jack Horners" may sit in their "corners" and enjoy the situation to the top of their bent. They may "put in their thumbs," but I imagine they will find it difficult to extract any financial plums from the pie.

The public do not fear, and have no reason to fear, a corner in gold. During the war, and for some time afterward, it was quite possible to make a profitable corner in gold when that metal alone was receivable in payment for duties on imports; and it was cornered—by those who were willing to speculate on their country's disasters—to the disturbance of business and the embarrassment of the Government. But, happily, the silver law of 1878 is an effectual barrier against a similar operation in the future on the part of these wreckers. If gold is withdrawn and "cornered" the two hundred and thirty-six million silver dollars now in the country will serve the turn and answer all requirements equally as well; and those who make the corner will have only their labor for their pains. Indeed, under present conditions, if the gold were cornered the public would know nothing about it unless specially informed of it.

The masses of the people of this country have seen no gold for a generation. It has not been in circulation, nor performed any of the functions of money for twenty-five years. During that entire period, except on the Pacific coast, it has been substantially cornered. Again I ask, what will they do with their cornered gold? It is not needed to pay foreign balances, because they are now, and are likely to continue, largely in our favor, and there is no other country in which gold money or any other money can be used more profitably than in this. In short, as a financial operation, the corner is an arrant and foredoomed failure; and the threatened "corner," as a source of alarm, was received with universal derision, and proved equally a failure. Other and more absurd threats were widely made during the scare of a year ago. It was extensively published in the newspaper press that some insurance company, whose name I forget, threatened to withdraw its business and its assests from this county in case the silver coinage was continued. Whether this paralyzing threat has been carried into effect I am not informed. It is possible that this institution may have gone, and it is possible that many of the gold worshipers, unable to live under this "depreciated silver standard," may conclude to go, but I am quite sure that "He who tempers the wind to the shorn lamb" will enable the country to endure it. All these puerile threats remind me somewhat of an incident which occurred in California during the civil war. One morning, meeting a gentleman of my acquaintance who was a mild sort of Union man, he told me he had fearful news from the East—bad news for our side. Thinking that he had received information of another Union defeat, I eagerly asked him what it was. He replied, "My brother Tom has joined the confederacy." [Laughter.] I said, "That is awful! There is no telling what vials of wrath Providence may have in store for us, but it is to be hoped that the country may survive the shock!"

Referring again to the fears of the Senator from Rhode Island [Mr. ALDRICH] that contraction of the currency will follow the passage of the pending resolution, I think I have shown that, although it may diminish the volume of money which is uselessly hoarded in the Treasury, it will increase the quantity in circulation, and result in an annual saving of $3,000,000 in interest. But how, upon the theories of the school to which the Senator from Rhode Island belongs, can it be of any consequence whether the volume of money is contracted or not? He believes, because all other forms of money in this country are now at a parity with gold, that we have a "gold standard" which, if it means anything, means that we have a standard regulated by the average cost of producing a certain number of grains of gold.

If that is true, it must be immaterial how many national banks may surrender their charters, or how many millions of national-bank circulation may be retired. If that is true, the retirement of the bank notes would not affect the value of the gold dollars remaining in circulation but would more firmly establish the gold standard by decreasing the paper demands upon it. The Senator betrays a lurking doubt of the soundness of his own theories when he specially deprecates the contrac-

tion of the national-bank notes, as he has frequently done in this debate and as he did not long ago by the introduction of a bill providing for the issuance of 2 per cent. long bonds, through the use of which the national banks might avoid a surrender of their circulation. But of what consequence is either the contraction or expansion of the volume of the currency if the value of money does not depend upon its volume? And, on the other hand, if the value of money does depend upon its volume why import into this discussion such wholly irrelevant things as the "commodity value" of gold or the cost of producing that metal?

Mr. ALDRICH. Does the Senator want an answer?

Mr. JONES, of Nevada. Yes, sir. If the value of money does not depend on its volume, what difference does it make whether you contract or expand it? In either case you still have the "gold standard." Even if you retire all the bank notes and greenbacks, you would still have the gold standard unchanged, and leave the gold dollar with no more purchasing power than it has now, if it be true that the value of gold, when used as money, is governed by the average cost of producing it. Is that cost rendered any greater or less because of the retirement of three or four hundred millions of paper? The Secretary of the Treasury in his annual report of last December recommended that the entire greenback circulation of $346,000,000 should be retired before the 4th of March, 1889. This, in my judgment, would result in such a financial crisis as this country has never seen, but, upon "gold-standard" theories, would be logical and safe and wise.

The term "gold standard" is almost as indefinite, vague, and misleading as the term "intrinsic value." It expresses no definite idea; and if it be admitted that the value of each unit of money is governed by the number of units in circulation it is as absurd to call the standard a "gold" standard because the Government decreed that gold alone should perform the money function as it would be to call the yard-stick made of ivory an "ivory standard" of length if the Government should decree that no yard-sticks should be used except those made of ivory. The ivory would have no more controlling force in governing the length of the stick than gold would have in determining the value of the money unit. The controlling element in the one case is a certain degree of linear extension; the controlling element in the other case is the number of units of money.

Whenever this great question shall be discussed as it ought to be discussed, the country will see that the monetary standard must always and in all cases be one of numbers, relatively to population, and when they do see it they will discard barter-money whose production is the result of chance and whose volume may fall so far short of what is demanded by the wants of commerce as absolutely to strangle both commerce and industry.

So varying and uncertain has been the supply of metallic money in the past that the advance of the world has been fitful and spasmodic. The discovery of new and prolific mining fields has distinctly marked the periods of prosperity, and the years of declining supply have as distinctly marked those of adversity.

Mr. Jacobs, in his history of the precious metals, states that at the commencement of the Christian era there were $1,800,000,000 of gold and silver in the western world, and that by the end of the eleventh century there were but $200,000,000. This pregnant statement renders unnecessary any other explanation of the extraordinary disappearance of the art, science, liberty, and civilization of the world in the period known as the "Dark Ages." The first reaction came with the invention of bills of exchange, which in some measure increased, if not the volume, the efficacy of money. That, however, was not sufficient, and permanent relief was obtained only when the argosies of Spain brought gold and silver money from the New World and placed it within the reach of the industries of Europe. In this, as in every other instance in which the volume of money has been adequately increased, civilization advanced by leaps and bounds.

In 1848, on the Pacific coast, John Marshall saw something shining in the sand, in the tail race of Sutter's mill. Never did a light shine so far as that. Never did the lost wanderer in the desert hail the bubbling spring with more joy than did the world hail that which was to relieve the famine of money. In twenty-five years after the discovery $3,000,000,000 were added to the world's supply of gold. In that short period the world made more advance than it had made during the previous two hundred years. It was then that the rate of interest, to which the Senator from Massachusetts [Mr. HOAR] has called my special attention, instead of declining in consequence of the abundance of money, increased in a marked degree.

In that case, as in all cases when the volume of money has increased, interest rose because the price of property rose and because those who borrowed money could afford to pay a larger interest when the property in which they invested it instead of shrinking expanded in value. During those twenty-five years of prosperity based upon an adequate volume of money increasing with the demands for it there were more railroads built and more inventions made, and a greater advance, materially, morally, and intellectually, all over the world than ever before.

It was not the production of $3,000,000,000 worth of property, but the production of three billions of the units of money which constituted the significance of the metallic discoveries in California and Australia. The State of New York alone produces yearly almost $1,500,000,000 worth of property which in no way attracts the special attention of mankind. In what way then did the gold of California and Australia produce the great effects that followed its discovery? Was it because it supplied the demand for bangles and breastpins? No; it was because it reversed the process by which prices had been shrinking after 1809 through the decrease in the volume of money resulting from the war between Spain and her American colonies.

From the report of the monetary commission of 1876–'77 I quote a truthful description of the misery and discontent which were occasioned by the long-continued shrinkage in the volume of money, commencing at the outbreak of that war and terminating with the discovery of gold in California:

Symptoms of disasters similar to those which befell society during the Dark Ages were observable on every hand during the first half of this century. In 1809 the revolutionary troubles between Spain and her American colonies broke out. These troubles resulted in a great diminution in the production of the precious metals, which was quickly indicated by a fall in general prices. As already stated in this report, it is estimated that the purchasing-power of the precious metals increased between 1809 and 1848 fully 145 per cent., or, in other words, that the general range of prices was 60 per cent. lower in 1848 than it was in 1809.

During this period there was no general demonetization of either metal and no important fluctuation in the relative value of the metals, and the supply was sufficient to keep their stock good against losses by accident and abrasion. But it was insufficient to keep the stock up to the proper correspondence with the increasing demand of advancing populations. The world has rarely passed through a more gloomy period than this one. Again do we find falling prices and misery and destitution inseparable companions. The poverty and distress of the industrial masses were intense and universal, and, since the discovery of the mines of America, without a parallel.

In England the sufferings of the people found expression in demands upon Parliament for relief, in bread-riots, and in immense Chartist demonstrations. The military arm of the nation had to be strengthened to prevent the all-pervading discontent from ripening into open revolt. On the Continent the fires of revolution smoldered everywhere and blazed out at many points, threatening the overthrow of states and the subversion of social institutions.

Whenever and wherever the mutterings of discontent were hushed by the fear of increased standing armies the foundations of society were honey-combed by powerful secret political associations. The cause at work to produce this state of things was so subtle and its advance so silent that the masses were entirely ignorant of its nature. They had come to regard money as an institution fixed and immovable in value, and when the price of property and the wages of labor fell they charged the fault not to the money but to the property and the employer. They were taught that the mischief was the result of overproduction.

Never having observed that overproduction was complained of only when the money stock was decreasing, their prejudices were aroused against labor-saving machinery. They were angered at capital, because it either declined altogether to embark in industrial enterprises or would only embark in them upon the condition of employing labor at the most scanty remuneration. They forgot that falling prices compelled capital to avoid such enterprises on any other condition, and for the most part to avoid them entirely. They did not comprehend that money in shrinking volume was the prolific parent of enforced idleness and poverty, and that falling prices divorced money, capital, and labor, but they none the less felt the paralyzing pressure of the shrinking metallic shroud that was closing around industry.

The increased yield of the Russian gold-fields in 1846 gave some relief and served as a parachute to the fall in prices, which might otherwise have resulted in a great catastrophe. But the enormous metallic supplies of California and Australia were all needed to give substantial and adequate relief. Great as these supplies were, their influence in raising prices was moderated and soon entirely arrested by the increasing populations and commerce which followed them. In the twenty-five years between 1850 and 1876 the money stock of the world was more than doubled, and yet at no time during this period was the general level of prices raised more than 18 per cent. above the general level in 1848.

A comparison of this effect of an increasing volume of money after 1848 with the effect of a decreasing volume between 1809 and 1848, strikingly illustrates how largely different in degree is the influence upon prices of an increasing or decreasing volume of money. The decrease of the yield of the mines since about 1865, while population and commerce have been advancing, has already produced unmistakable symptoms of the same general distrust, non-employment of labor, and political and social disquiet, which have characterized all former periods of shrinking money. (Senate Report No. 703, Forty-fourth Congress, second session.)

Is it not probable that the similar conditions existing to-day may, if not averted by wise legislation, produce like results?

The cause most frequently given for the present depression all over the world is "overproduction." Nevertheless it is certainly true that there can be no such thing as a general overproduction. There may be a temporary overproduction of particular things. But, viewed in the large, supply and demand are but two phases of the same thing. Whoever produces anything for sale creates thereby a new demand for something else, and the power of the world to consume depends upon the extent to which it produces. There never has been and never can be an overproduction of things needed by the human family.

It is preposterous to say that there is too much clothing or that there are too many shoes when there are vast numbers of people who are barefooted and are covered only with rags; it is preposterous to say that there is too much food when a large portion of mankind are always on the verge of starvation. If this theory of "overproduction" has any truth in it, it would be wise to provide by law for the imprisonment of all persons engaged in productive industries and for the reward of tramps who live on free lunches. [Laughter.]

No, Mr. President, the difficulty is not in that impossible thing, "overproduction," but in under-consumption, caused by the congestion of business which has been brought on by the shrinking of the volume of money and steadily falling prices. Consumption has fallen off, not because consumers are oversupplied but because, being largely remitted to idleness, they lack the means of purchasing the things which they grievously need.

Great as the difficulty is it may nevertheless not need much added

money to remove it, and especially if the country could be satisfied that the policy of contraction was permanently reversed. It is only the difference between 31° and 33° Fahrenheit which makes the change from freezing to thawing. Within that range of the thermometer the surface of the earth is at one time all ice and at another time all flowing water and fructifying streams.

Similarly, it happens that whenever the volume of money shrinks, by however small a proportion, if only the proportion be such as to increase in any perceptible degree the difficulty of obtaining it, forthwith the more acute and watchful observers decide to keep under control the money they have by depositing it in banks or otherwise, and especially by avoiding investments in property. The less active neighbors of these sharp and watchful men instinctively follow their example, and thus the circle of distrust becomes wider and wider. In this country to-day the range of prices is probably 20 per cent. lower than it would be if the money in existence were in actual circulation.

A little shrinkage of the money in existence causes a great shrinkage of the money in circulation because of hoardings on the part of all those who believe that prices have not reached bottom.

However, in the course of a long-continued shrinkage in the volume of money men become impatient; they get tired of inaction; they find themselves eating up their principal, and are likely from time to time to conclude from some circumstance that the shrinkage is at an end and that prices are at the bottom.

This circumstance may be one thing, and may be another. Sometimes it is nothing more than the assertion of the combined newspaper press that things are going up; sometimes it is the prospect of great crops; sometimes it is the fact of the increased earnings of particular classes of railroads. But the process of shrinkage resulting from the hoarding of money is, as matter of fact, sometime or other interrupted by a reaction. When that occurs there is always a possibility of a considerable increase of the money in circulation, because the amount of hoarded money is frequently large, being probably in some extreme cases as much as 33⅓ per cent. of all the money in the country. Of course the sudden and rapid increase of a much less proportion than 33 per cent. of the money will cause what is called a "boom."

There was probably 33 per cent. of our money locked up in the summer of 1879, when the upward reaction of that time commenced. It may not be possible to understand all the precise causes which led to it, but among them undoubtedly was the prevalence of the opinion that the resumption of specie payments on the 1st of January of that year would cause a change for the better. At any rate there was a change for the better. The hoarded money was unlocked by the rising of prices. The "boom" lasted two years, and, like all reactions, whether upward or downward, it went beyond the legitimate force of the causes that produced it and ended in disaster.

Since 1881 there has been a persistent downward reaction and a steady decline in prices, aggravated by renewed hoardings and by a continued shrinkage of the volume of money in circulation as a consequence of those hoardings. As I said a moment ago, it is undoubtedly true that the volume of money now in existence warrants higher prices than those which are current; but what particular circumstance may cause a temporary upward reaction none can foresee. This explains the seeming anomaly of the rise of prices at times when the volume of money relatively to population is actually shrinking.

I asked a political economist lately what was the cause of the depression in business. His answer was that it was a "lack of confidence." I asked him in respect to what there was a lack of confidence; whether it was a lack of confidence in the integrity of the people, in the stability of the Government, or in the abundance of the crops, but I got only the answer that the difficulty was a "lack of confidence." The political economist did not answer my question. But I will endeavor to answer it myself. I say that it is a lack of confidence on the part of the people that when they invest their money in property they will get it back again.

It is a general lack of confidence that prices will rise or that they are even at the bottom. In fact it is a general belief that they are still going down. No man keeps his money idle when he sees a chance of profitably investing it. And all men, without any express formulation, do by their actions indicate their belief that the volume of money is destined to a further shrinkage, and that prices can not rise as long as that operation continues.

What is the situation to-day? The circulation of the banks is contracting. The supply of gold from the mines is scarcely enough to meet the demands of the arts, and the supply of silver only slightly exceeds the demands of the arts and the immemorial demands of Asia. For the last thirty years the world has been mercilessly ransacked for gold and silver, and it is doubtful whether any new or extensive gold fields will ever be discovered.

Silver mines are almost as readily discernible on the surface of the earth as forests are, and it is the first croppings that are the most productive. The difficulties of working them multiply as you descend into the earth; and in all silver mines a barren zone is soon reached at which, in point of fact, the working of the mines generally ends. The depth of the barren zone can not be anticipated, and the uncertainty of the result and the cost of the experiment of penetrating it deter most operators from the hazard.

All the facts of the mining situation indicate that no increase of the world's yield of the precious metals can be reasonably anticipated, and consequently something else than the precious metals must be relied on to supply the world's increasing demand for money.

I advocated the remonetization of silver in 1878, and have since urged its coinage up to the maximum permitted in the law passed in that year, because I believe in the principle that the money standard of a country is one of relative numbers, and that even if all the silver available for coinage were struck at our mints the volume of money in this country would not increase by a greater percentage than the increase of its population. I knew that the people were accustomed to a metallic money and that it was one of their inherited ideas, which they would not readily abandon. The precious metals have been immemorially regarded as the materials best fitted for the money function, but I believe that the time is at hand when we must recognize the fact that money is, after all, only an invention of society, and that it is one of the highest duties of government to regulate its volume and value in order that justice may prevail throughout all the land.

The question, Mr. President, is many-sided. I did not intend to discuss it during this session of Congress, and it is only by accident that I have been drawn into the present debate. I hope, however, that at the next session of the Senate this body may be inclined to discuss it fully, not in the form of set speeches running on parallel lines, but by the method of question and answer, in which Senators will state with frankness the position they occupy on the various propositions involved.

Naval Establishment.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 6664) to increase the naval establishment—

Mr. WHEELER said:

Mr. CHAIRMAN: I regret very much to hear this character of opposition to so important a measure. I am as sincerely desirous as any gentleman on this floor to protect American interests.

I appreciate the importance of all that has been or may be said favoring the use of American products in constructing American ships. I think that as far as it is possible the Government should use domestic materials in all its work, even though in some instances the same material could be purchased at lower prices in foreign countries.

There are many reasons why this policy should be steadfastly pursued.

First. The money would be kept at home.

Second. The Government can afford to pay something to encourage American enterprises.

Third. It is of the utmost importance that our manufacturers should be encouraged to make armor-plates and all other materials for war vessels, because it is obvious that, in the event of war, we would find it impossible to procure such materials from foreign nations.

For these reasons I advocate the proviso requiring the armor to be of domestic manufacture if it be possible to procure the material in this country within a reasonable time. But while much of the steel plate now indispensable to the efficient construction of an armored vessel can be procured here, it is admitted that the armor for the turrets of the monitors can not, at this time, be obtained in this country, and it is also admitted that it is very doubtful if this character of armor can be manufactured in the United States for some time to come. I therefore insist that to make it obligatory upon the Secretary of the Navy to use armor of domestic manufacture only would be to seriously delay the completion of those vessels.

On the 18th of June last I had the honor of addressing some remarks to the House upon the importance, the necessity, of having a navy, if the dignity and honor of our country are to be properly maintained.

I think it has been clearly demonstrated that during the last twenty years the United States has declined from the position of the most formidable naval power in the world to that of the feeblest; that all our ports are now at the mercy of eight foreign nations, and that even China, Brazil, and Chili possess naval ships and guns with which they could, as an alternative to bombardment, levy contributions upon nearly all of our coast cities. It has been further shown, I think, that the navy of any of the great powers could stand off, with their long-range guns—having a destructive range of 10 miles and upward—and sink any or all of our vessels, none of which carry guns of more than half that range.

In the presence of such a possibility I can not understand why so

many obstacles are interposed to the immediate inauguration of measures designed to remedy our absolutely defenseless condition—why gentlemen should insist upon amendments the adoption of which must have the effect of delaying those initial steps which are of necessity preliminary to the construction of efficient naval ships.

I certainly can not comprehend why any one should wish for further delay in completing the monitors. They have been in process of construction for twelve years, and those who take pride in our country wish to see them finished and afloat.

I will not intimate that those who seek to interpose and insist upon impossible conditions desire to prevent the building of a navy, but when we recall the fact that only on Thursday the consideration of the naval construction bill was defeated by Republican votes, it does seem that there is danger of such a suspicion arising in some minds.

I read from the RECORD, page 7336:

The SPEAKER. The question is now, will the House proceed to the consideration of the bill (H. R. 6664) to increase the naval establishment, which was made a special order for to-day?

A vote was taken upon this question, and 90 Republicans voted against the consideration of the bill and only 17 Republicans in favor of it.

It seems to me very clear that the friends and advocates of an efficient navy are to be found in the Democratic party.

Mr. BUTTERWORTH. I would like to ask my friend from Alabama a question. Does not the report of the board selected by the Senate to inquire into the question of the possibility of procuring steel or other suitable material for providing armor in this country state that all the requirements of the Government in that direction can be produced by American manufacturers?

Mr. WHEELER. And if they did this bill says that the Secretary of the Navy must procure it here.

Mr. BUTTERWORTH. But it goes further than that; it leaves it in the power and discretion of this officer to go outside to get it; and it is a dangerous power to put into the hands of a man who may not possibly be specially friendly to American industries.

Mr. WHEELER. But this administration is the most friendly to American interests that this country has had for the last twenty-five years. [Applause on the Democratic side.]

Mr. BUTTERWORTH. The defenseless condition of our coasts do not indicate that.

Mr. WHEELER. The present condition of our coasts was brought about by the administration prior to 1885.

Mr. BUTTERWORTH. And the first step of the Secretary of the Navy is to crush out the only plant in this country which is able to give us a good war ship.

Mr. SAYERS. I rise to a question of order.

The CHAIRMAN. The gentleman will state it.

Mr. SAYERS. Has not the debate closed on this amendment?

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. REED, of Maine. What is the use of talking about what the administration wants when the other side of the House is not influenced by such considerations?

Mr. WHEELER. It has every influence on this side, and is sustained in its laudable and successful efforts to introduce economy, integrity, and efficiency in every department of the Government.

[Here the hammer fell.]

Reduction of Customs and Internal-Revenue Taxes.

SPEECH

OF

HON. SAMUEL J. RANDALL,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 5, 1886,

On the bill (H. R. 9702) to reduce and equalize duties on imports, to reduce internal-revenue taxes, and to modify the laws in relation to the collection of the revenue.

Mr. RANDALL said:

Mr. SPEAKER: I present the following statement explanatory of House bill 9702, entitled "A bill to reduce and equalize duties on imports, to reduce internal-revenue taxes, and to modify the laws in relation to the collection of the revenue."

It is not claimed that the bill contains anything extraordinary, or that it is entirely original. That portion relating especially to duties on imports, includes much that was embraced in the bill introduced early in the session by the chairman of the Committee on Ways and Means. It also embraces the recommendations of Acting Secretary of the Treasury Fairchild in his letter of the 14th of June, 1886, to the chairman of the Committee on Ways and Means, relating to duties on silks, laces, embroideries, and leather gloves. The other provisions changing rates of duty on imported articles are designed either to aid, to the extent of the revenue power, new and much-needed industries, or in like manner revive languishing industries, in the interest of home labor and home trade, or to give legitimate encouragement to our agricultural interests, or to correct inequalities in the existing laws, or to reduce the cost of commodities to the consumers of the country, or to afford proper safeguards to legitimate importers throughout the country by the judicious application of specific duties, and thereby lessen the opportunities for fraud and evasion, or to simplify administration and diminish the cost of collecting the revenue.

The purely administrative provisions of the bill are, with slight modifications, those of the Hewitt bill, as is also the provision (section 7) remitting the internal-revenue tax on alcohol used in the arts, or for manufacturing purposes.

The sections abolishing the internal-revenue tax on tobacco, snuff, &c., and on fruit distillations are those embodied in bills introduced by Mr. TUCKER, of Virginia.

There is nothing in the bill calculated to cause a shock to any business interest of the country; but it does contain a number of provisions which would infuse new life and vigor into different business interests; and it is believed that the general tendency of the bill would be reassuring to the country.

It is not claimed to be a complete or perfect measure of tariff revision, but a fair step in the right direction and a sufficient indication of the policy which should be pursued in revising or remodeling our tariff and revenue laws. It affords an opportunity for the two great political parties of the country to give an earnest of their purpose to fulfill the pledges made at Chicago in 1884, namely, "to revise the tariff in a spirit of fairness to all interests," and "to correct the inequalities of the tariff and to reduce the surplus."

TIMBER, LUMBER, ETC.

With a view to the protection of our forests, the bill provides for the free admission of timber, sawed lumber, pickets, palings, staves, posts, blocks, &c., imported in the rough state. At the same time, however, provision is made for the protection of our planing and finishing mills and of our carpenters and builders, by imposing a sufficient duty upon all the articles named when advanced from the rough state. The present rate of duty is retained on laths and shingles, as the value of the raw material in them is small compared with the amount of labor in their production.

JUTE BUTTS.

Jute butts do not compete directly with any fiber grown successfully in this country, and their exemption from duty would not hurt our agricultural interests. At the same time, the removal of the duty would reduce considerably the cost of production of gunny cloth and other coarse articles of common use made from them, including bagging for cotton, &c., and thus benefit the consumer.

As to hemp, manila, sunn, sisal grass, and other fibrous vegetable products, the duty should be differentiated the same as in flax, so that the tax thereon would be laid in accordance with the amount of labor put on the article as it is advanced from the crude condition. The data is not at hand for providing rates in this view. It is therefore thought best to allow the existing rates to stand on these articles for the present.

BRISTLES.

The exemption of bristles from duty would benefit greatly the brush manufacturers of this country; in fact would revive that now languishing industry, and thus would not only give employment to much idle labor, but would also result in keeping at home probably $300,000 of the money now sent abroad annually to purchase foreign-made brushes, and would reduce the revenue from that source perhaps $100,000 per year. The present duty on bristles is no more needed than a duty on other offal of the hog. The best bristles are not produced in this country, but come from the inferior wild hogs of Northern Russia, which bristles our brushmakers must have.

IRON AND STEEL MANUFACTURES.

The reductions in rates on various manufactures of iron and steel are quite liberal and are thought to be as much as these articles can bear without reducing the price of labor engaged in their production, or opening the gate to a flood of foreign products of these classes.

Stated in ad valorem equivalents, the percentages of reduction on the several groups of articles are as follows:

Iron and steel railway bars, weighing over 25 pounds to the yard, 9 per cent. to 12 per cent.

Iron and steel T rails, weighing not over 25 pounds to the yard, 12.66 per cent.

Iron and steel fish-plates, or splice-bars, 17.60 per cent.

Horseshoe nails, hob-nails, &c., 29.21 per cent.

Iron or steel beams, girders, joists, angles, &c., 20.12 per cent.

Steel wheels, steel-tired wheels, &c., 14 per cent.

Iron or steel ingots, cogged ingots, blooms, &c., 25.37 per cent.

Sheet-iron, common or black, not thinner than No. 20, 4.27 per cent.

The same, thinner than No. 25, 8.14 per cent.

Round iron in coils or rods, &c., 8.41 per cent.

Wire rope and wire strand, not smaller than No. 16, 5.86 per cent.
The same, not smaller than No. 26, 11.23 per cent.
Wire cloths and wire nettings, not smaller than No. 26, 20.04 per cent.
The same, smaller than No. 26, 17.22 per cent.
Lead ore and lead dross, 37.02 per cent.
Lead in pigs and bars, &c., 21.48 per cent.
Lead in sheets, pipes, or shot, 42.81 per cent.
Zinc spelter or tutenegue, in sheets, 14.20 per cent.
Zinc, old and worn, &c., 47.28 per cent.

The provision fixing a uniform rate of 1½ cents per pound on all common, or black sheet-iron, and so called "taggers" iron, thinner than No. 25 wire gauge, is to do away with an inequality and a fruitful source of fraud in the present law, which has not only been seriously hurtful to domestic industry but also to honest merchants, and has benefited nobody but foreign manufacturers. It is not believed that the rate proposed will exceed the equivalent of 40 per cent. on an honest valuation, although it is apparently about 51 per cent.

Under the present law the rate on the article not thinner than No. 20 wire gauge is 1.1 cents per pound (which the bill reduces to 1 cent), while the rate on the article not thinner than No. 29 wire gauge is 1.5 cents per pound.

This scale of progression in rates under the present law ceases at No. 29 wire gauge, and a duty of 30 per cent. ad valorem is imposed upon all above that gauge, which includes what is commercially known as common, or black, "taggers" iron.

Statistics of the importations for 1884 and 1885 show that the duties collected on the article admitted at the latter rate averaged below the equivalent of 1 cent per pound. This shows that the finer article, up to 36 wire gauge, was so invoiced and admitted that the rate actually collected thereon was much below that imposed on the coarser article (No. 20 wire gauge), whereas, at the rate of progression in rates up to No. 29 wire gauge, the rate imposed upon No. 36 would have been eight-tenths of a cent per pound more than that on No. 20, or 1.9 cents a pound. It is thought that the rate proposed in the bill (1½ cents a pound) will enable our manufacturers to make the article, and thus give needed employment to home labor without increased cost to the consumer, and at the same time save trouble in administration, and also result in a reduction of revenue from this article.

TIN PLATES.

The present rate of 1 cent per pound on tin plates is purely a revenue duty, and operates as a tax upon the consumer without benefiting any American industry. If we can not produce the article in this country, then this tax should be taken off. If, by increasing the rate 1¼ cents per pound, we can establish the tin-plate industry successfully in the United States, it is certainly wise policy for us to do so, as it would result in giving needed employment to labor and capital, would, by competition, give the consumers of the country a better article at a price no greater than is now paid for the inferior quality we get from abroad (and the use of which has proved so detrimental to our trade in canned meats, fruits, &c.), and would relieve us from dependence upon a foreign country for an article of such extensive and indispensable use.

It is claimed and believed that with a duty of 2¼ cents a pound the tin-plate industry would be speedily and successfully established here. In this view let us try the experiment, and if it fail then remove the duty entirely.

The United States is the largest consumer of tin plates in the world. We afford Great Britain a market for two-thirds of her entire production of that article; in fact we have practically built up and are sustaining that most prosperous branch of the iron and steel industry of England and Wales, and this, too, largely to the detriment of our domestic manufacturers of those qualities of sheet-iron and steel which enter into competition with tin plates and terne plates for certain important uses.

Our mines contain all the raw materials entering into the production of tin plates and terne plates that are to be found in the mines of England and Wales; yet we do not produce a box of these plates, for the reason that the duty imposed does not adequately protect our higher priced labor.

Within the past six years we have paid British manufacturers over $100,000,000 for tin plates, besides paying foreign vessels some millions more for bringing them to our shores. This is too much money to send out of the country for an article which we are capable of producing, especially when the balance of trade is running against us.

Herewith is submitted a statement showing that the drawback paid on tin plates in 1885 was $1,144,134.12, and in 1886 was $1,220,935.31. The figures for 1885 are official, and those for 1886 are from official reports up to May 31; the amount for June being estimated.

It thus appears that over 25 per cent. of the revenue from tin plates is consumed in drawbacks. The revenue gets really less than three-fourths of a cent per pound on tin plates. There is always more or less fraud attending the payment of drawbacks.

Statement showing amount of drawback paid on tin plates during the fiscal years of 1885 *and* 1886, *as shown by the accounts received.*

* Includes drawback on solder, handles and nozzles, and on lumber and nails used in boxing; drawback on tin estimated at 87 per cent.
† August 1, 1885, to May 11, 1886.

JOHN S. McCALMONT, *Commissioner of Customs.*

TREASURY DEPARTMENT, OFFICE OF COMMISSIONER OF CUSTOMS, *July* 9, 1886.

SUMMARY.

Duties collected on tin plates during fiscal year 1885	$5,055,590 76
Drawback paid on tin plates during fiscal year 1885	1,144,134 12
Net revenue	3,911,456 64
Duties collected on tin plates during fiscal year 1886 (June estimated)	5,532,752 04
Drawback paid on tin plates during fiscal year 1886	1,220,935 31
Net revenue	4,311,816 73

IRON AND STEEL WIRE RODS, IN COILS AND LOOPS.

Steel wire rods lighter than No. 5 wire gauge, not being specially provided for, fall under the provision "for all forms or kinds of steel not specially enumerated," at 45 per cent. ad valorem, while both iron and steel wire rods above No. 5 wire gauge are provided for at six-tenths of a cent per pound or $13.44 per ton. The result is that an immense quantity of the article lighter than No. 5 (and which is really wire) has been imported at values which, at 45 per cent., have yielded a duty less than the equivalent of $11 per ton. Thus a much lower rate of duty is actually collected upon the finer and more costly than upon the coarser and cheaper article. That this is accomplished by evasion is manifest, and that it benefits no one but the foreigner is certain, while it takes large sums of money annually out of the country, and is a serious injury to home industry, without compensatory benefits to consumers.

The statistics show that the importations of iron and steel wire rods

not lighter than No. 5 wire gauge were invoiced at an average value, in 1885, of about 1¾ cents per pound, while steel wire rods lighter than No. 5 wire gauge were invoiced at an average value of only 1.2 cents per pound, thus clearly showing that the latter was undervalued, since (being finer) they are worth more than the article invoiced at 1¾ cents. The rate collected in 1885 on iron and steel rods not lighter than No. 5 averaged about the equivalent of 35 per cent. only; and it is believed that the rate (eight-tenths of a cent per pound) proposed in the bill on the article lighter than No. 5 wire gauge would not yield above 35 per cent. if the article was invoiced at a proper valuation.

It is believed that the rate proposed would enable our manufacturers to make the article, thus giving increased employment to labor, and would at the same time save great trouble in the custom-houses and put a stop to fraud.

It would probably reduce the revenue from this source fully $400,000 a year.

COTTON-TIES.

The bill provides a duty of 1 cent per pound on iron or steel cotton-ties or hoops for baling purposes, instead of the present rate of 35 per cent. ad valorem, and which, at the entered values of the past two years, has only equaled about one-half cent per pound. The rates imposed by the existing tariff on common bar-iron are from eight-tenths of a cent to 1.1 cents per pound, and on plain hoop-iron from 1 cent to 1.4 cents per pound. The "cotton-tie" is made from hoop-iron, and represents, in addition to the value of the iron in that form, the cost of cutting into lengths, the buckles, punching, riveting, varnishing, &c. Thus the finished article pays only about half the actual duty that is imposed upon the material from which it is made—a positive discrimination against the home manufacturer and in favor of foreign manufacturers and of a monopoly of foreign shippers who really control the importations to this country.

This is done by the grossest evasions of duty, from which they derive the full benefits, as the consumers of this country have to pay the full value of the article. The average invoice value of the cotton-ties imported in 1885 was 1.4 cents per pound, while the average invoice price of the kind of hoop-iron (not thinner than No. 20 wire gauge) from which they are made (but which pays a specific duty of 1.2 cents per pound) was 2.6 per pound, thus clearly showing that the cotton-ties were invoiced and paid duty at less than one-half their true value. Certainly the consumers of cotton-ties of this country should not desire nor be willing to profit, even if they could, from an irregularity of this kind. One and four-tenth cents with 35 per cent. added is little more than 1¾ cents per pound. Let the consumers of cotton-ties examine their bills and see how this price compares with those they have paid for the article.

The rate of duty proposed by the bill is not believed to be above the equivalent of 40 per cent. on a fair valuation of the article. It is lower than it should be; yet it is thought that it will enable our manufacturers to make the article, and thus, by competition, not only make it as cheap or cheaper to the consumer, but at the same time help home industry, give needed employment to labor, keep at home some $500,000 a year (now sent abroad), besides saving a large sum expended in collecting the revenue, as the frauds in the invoicing of this article have been a source of great trouble and expense in the custom-houses. It is believed that if the rate of duty proposed by the bill is adopted, it will result in a reduction of the revenue of at least $100,000 annually from a reduction of importations.

STARCH.

The reduction in rates proposed on potato or corn starch is equal to 22 per cent., and on rice and other starch, equal to 13 per cent. The proposed rates are believed to be ample, however, for the protection of these articles, and it is not believed that the reduction in rates would cause any increase of importations.

RICE.

The proposed provision for rice flour, meal, and broken rice, with the proposed regulations governing the importations, will afford far better protection than under the existing tariff, and it is believed will result in excluding large quantities of the article heretofore imported as "broken or granulated rice," at 20 per cent., by subjecting it to the specific rates, either as cleaned or uncleaned rice; so that it is estimated that there will be a reduction of revenue from this source of not less than $60,000 annually.

GLUCOSE OR GRAPE SUGAR.

Considerable trouble has arisen in the custom-houses on account of the undervaluation of this article, particularly of large consignments from Germany, made from potatoes, and which have had the effect to depress the market for the domestic product made from Indian corn, thus affecting not only an important domestic industry, but also a great agricultural interest. The importations in 1885 amounted to 2,496,408 pounds, at an average invoice price of only 2.7 cents per pound. The specific rate proposed is thought to be below the equivalent of 20 per cent. ad valorem on a fair valuation of the article. Therefore it does not really increase the existing rate, but will prevent the importation of the article in fraud of the revenues, and hence tend to its exclusion, so that a reduction of one-half at least of the revenues from this source would result—say $7,000 a year.

CASTILE SOAP.

The undervaluation of this article has caused much annoyance in the custom-houses, and has been a source of much vexation and loss to honest merchants, so that the imposition of a specific duty upon it has become a necessity in the interests of honest merchants, and of the Government in the protection of the revenue. The specific rate proposed is really less than the equivalent of 20 per cent. ad valorem on a fair valuation of the article. The average invoice price of the article during 1885 was 6 cents per pound.

COD-LIVER OIL.

The specific rate proposed will put an end to the troubles arising from the undervaluation of this article, and will insure the importation of a purer and better quality of oil, being a considerable reduction of the present rate. Its operation will be beneficial to all parties properly interested in its importation and use.

OCHER AND OCHERY EARTHS AND UMBER AND UMBER EARTHS.

Although the proposed rates (on the articles in the dry or crude state) are only one-half the present rates, they are believed to be sufficient for the protection of our domestic paint mines of the same class, as the rate on ocher will be equivalent to 25.14 per cent. and on umber to 35.22 per cent. on the values of 1885.

CLAY TOBACCO-PIPES.

The imposition of a duty of 70 per cent. on "pipes, pipe-bowls, and all smokers' articles (except clay pipes)" has resulted in building up important industries in this country, and in retaining here the millions of money which formerly were sent abroad to purchase these articles, notwithstanding the fact that the duty (being ad valorem) is more or less evaded. The rate of 35 per cent., however, on clay pipes has resulted in practically destroying that industry in this country (notwithstanding we have the most superior clay for that use), and has given the trade in that article to German and Scotch manufacturers, who, by a system of undervaluation, combined with the low prices they pay for labor, have succeeded in starving out that industry in this country, which it is the purpose of this provision of the bill to revive, and thus not only give employment to a large number of skilled laborers, but also to retain here over $50,000 sent out of the country annually for the purchase of these articles.

It is represented by those in the trade that the bulk of importations is of what are known as "T. D.'s," and "short Dublins," the cost of production of which in this country (packed for market) is 46½ cents and 57 cents per gross, respectively, whereas the cost of producing the same abroad is only about 28 cents and 35 cents per gross, respectively. So that the rate (16 cents per gross) proposed by the bill is somewhat less than the difference in cost of production here and abroad; yet with the addition of freight, exchange, &c., and the prevention of undervaluation, it will cover the differences and thus build up and protect an important industry.

The rate proposed is not believed to be more than the equivalent of 50 per cent. ad valorem on the true value of the foreign article, including boxes, packing charges, &c., which charges, though now evaded, really form part of the salable value of the article. There is no reason for imposing a less rate of duty on clay pipes than on pipes made from wood or from other materials, although the latter pay 70 per cent. ad valorem. It is thought the proposed rate would cause a reduction in revenue of about $15,000 annually.

LIVE ANIMALS.

The law for the free admission of animals for breeding purposes has operated to nullify to a great extent the dutiable provisions for live animals. The importations are mostly from contiguous foreign territory, and compete directly with ordinary stock grown in this country. It having been held by the courts that any animal capable of breeding may be admitted free, the rule previously prescribed by the Treasury Department, that such animals must be of superior breed to be entitled to free admission has become nugatory. No benefit can now accrue to our agricultural or breeding interests by reason of said law. On the contrary these interests are injured by it.

It is a well known fact that, under the operation of that law and of the decisions of the courts referred to, stock-raisers in Canada advanced the price of breeding-animals equal to or beyond the amount of duty saved; and our farmers and others who bought such animals there had to pay as high or higher prices than if duty had been imposed, while the Government lost the revenue. Therefore, the persons chiefly benefited now by the continued free admission of such animals are the Canadian stock-raisers.

If it is desired to import valuable animals of superior breed the small specific duty proposed would be but nominal and not at all burdensome, while the imposition of such duty would be a proper tax upon animals competing with the ordinary stock grown in this country.

The change from ad valorem to specific rates is necessary by reason of the gross undervaluation which has been practised and will save vast trouble and expense in administration as well as much litigation. The practice of importers has been to undervalue the animals upon

which duty was to be assessed and to overvalue those entered free as for breeding purposes to deceive the customs officers.

The average reported value of those entered free is therefore incorrect and misleading.

The published reports of the Statistical Bureau of the Treasury Department show a continued and rapid increase of animals admitted free of duty, as if imported for breeding purposes, and prove beyond question that the provision of the present law for their free admission is being taken advantage of more and more in fraud of the revenue and to the detriment of our domestic stock-raising and wool-growing interests. For example, during the fiscal year 1884 the number of sheep admitted free was 4,260, and their average value per head was $17.31.

In 1885 the number increased to 5,294, and the average value per head fell to $6.78. During the ten months ending April 30, 1886, no less than 30,734 were admitted free at an average value per head of only $1.75; and reports recently received from the collector of customs at Corpus Christi, Tex., show that within three months over 31,000 sheep bearing heavy fleeces were admitted free of duty at one subport (Laredo) in his district, having been driven over from Mexico in four flocks for the purpose, undoubtedly, of shearing them in the United States, thereby escaping payment of the duty on the wool.

The official reports also show that the number of horses admitted free during the ten months ending April 30, 1886, was 18,002, an increase of 3,211 over the importations during the corresponding period in 1885. The average value per head of the horses admitted to free entry in 1885 was only $103.60. It will scarcely be contended that horses at this price, or sheep at $1.75 per head, are likely to improve the breeds of our domestic animals. The law as it stands only benefits smugglers, adventurous revenue defrauders, and stock-raisers in Canada and Mexico.

It is believed that the imposition of the rates proposed would result in excluding a large number of ordinary and inferior animals now brought in at nominal values, as well as a good many now undervalued, and would in the end cause a reduction, rather than increase, of revenue from this source. It would certainly prove a measure of protection to our stock-raisers, especially of horses, cattle, and sheep along the Canadian and Mexican borders, as well as to the wool-growers of the country.

ORANGES, LEMONS, AND LIMES.

The rates proposed on these articles are upon the same basis as the specific rates now imposed upon oranges as far as these rates go, which apply only to oranges in packages of certain capacity, while those not in packages of the capacity specially named are dutiable at 20 per cent. By levying purely specific rates on all these articles (in whatever sized package or form imported) evasions now extensively practiced will be prevented, honest importers will be protected, and great trouble will be saved in administration. The rate on lemons is a slight reduction of the present rate, which is 30 cents per package of 2½ cubic feet, instead of 25 cents.

GRAPES.

The rate now imposed on grapes is 20 per cent. ad valorem and has been shamefully evaded. They come chiefly from the Mediterranean, packed in barrels and kegs, and the deductions for these coverings, packing, &c., have left the dutiable value of the fruit itself a mere trifle, while selling at very high prices to the consumer, so that while the rate proposed is about one-fourth of a cent a pound more than is now collected it is much less than 20 per cent. of the actual value of the fruit. This article has been a source of great trouble in administration which the proposed change will obviate.

FRUIT JUICE OR CHERRY JUICE.

The rate now imposed on this article is 20 per cent. ad valorem, and it is believed was intended to apply to fresh or unfermented juices for use as food only, and not to a fermented article in form of a beverage or for use in making brandy or other liquors, in which condition it is now largely imported. It is contended by those well informed in the trade that after being sweetened and mixed with distilled spirits the article is sold as blackberry brandy, and is also used in the adulteration of port wine, and in making imitation wines, and should pay the duty imposed on still wines—50 cents per gallon—which would operate to exclude it.

CANDIED CITRON AND ORANGE AND LEMON PEEL.

These articles have been regularly and largely undervalued to the injury of the revenue and of honest merchants, and have occasioned much trouble in administration. Specific rates have been recommended by the trade and by customs officers. It is believed that the rates proposed are somewhat lower than the ad valorem rate of 35 per cent. now imposed, but that they will produce substantially the same revenue.

CEMENT, PORTLAND AND ROMAN.

The rate now imposed is 20 per cent. ad valorem, which, since the act of March 3, 1883, has been largely evaded by charges for barrels, packing, &c., resulting in litigation and trouble to the Government. American manufacturers of cement have been thus deprived of the protection which the law was intended to give them. It has heretofore been uniformly imported in barrels containing 400 pounds—worth in the foreign market from about $1.75 to $2 per barrel. The specific rate proposed of 8 cents per hundred pounds in barrels is therefore less than 20 per cent. on the true foreign value of the article, and will it is thought yield substantially the same revenue as heretofore.

WHITING AND PARIS WHITE.

The rate suggested is one-half the present rate of one-half cent per pound, which is equal to about 114 per cent. ad valorem.

GLYCERINE, REFINED.

The rate proposed is a reduction of 1 cent per pound, the present rate being 5 cents per pound, which in 1885 was equal to 53 per cent. ad valorem.

FISH GLUE OR ISINGLASS.

The rate now imposed on this article is 25 per cent. ad valorem, which (it is contended) has been largely evaded by undervaluation. Invoice values have been a subject of constant dispute at the custom-house ever since the duty was imposed in 1883. Prior to this time the article was free, and invoice values were nearly double the entered values since.

The importations are chiefly of what is known as "ribbon" isinglass, which was formerly invoiced at about 80 cents per pound, but has been entered (since it became dutiable) at about 45 cents per pound. The rate proposed would be 25 per cent. on a valuation of 60 cents per pound, and would apply also to the finer qualities of isinglass, such as "shredded" or "fine cut," used for culinary purposes, the value of which is very much higher than the "ribbon" isinglass.

CASTOR-BEANS.

The rate proposed is a reduction of 10 cents per bushel, the present rate being 50 cents per bushel, equal in 1885 to 48 per cent. ad valorem.

CASTOR-OIL.

The rate proposed on castor-oil is a reduction of 20 cents per gallon, the present duty being 80 cents per gallon, equal to 180 per cent. in 1885.

ACETATE OF LEAD.

The present rate is 6 cents per pound on white. The proposed rates are a reduction of 1 cent per pound on brown and 2 cents per pound on white. The ad valorem equivalent of the rate on the latter in 1885 was 136 per cent.

LITHARGE.

The rate proposed is a reduction of 1 cent per pound or one-third of the present duty, which is equal to 97 per cent. ad valorem.

ORANGE, MINERAL, AND RED LEAD.

The present rate on these articles is 3 cents per pound, which in 1885 was equal to from 73 per cent. to 85 per cent. ad valorem.

NITRATE OF LEAD.

The present rate is 3 cents per pound, which in 1884 was equivalent to 66 per cent.

The reduction in rates upon acetates of lead, litharge, orange mineral, red lead, and nitrate of lead are compensated for in the reduction of rates proposed on lead ore, dross, &c., from which these articles are made.

COTTON GOODS.

The only change from the present provision for stockings and knit goods generally is in the second paragraph, which is made to include "other goods" (besides stockings, hose, half-hose, shirts, and drawers), such as gloves, &c., and which should be subject to the same provisions.

The paragraph for "clothing, ready made," &c., is a new one, and increases the rate now collected on these articles 5 per cent., which is no more than enough to afford proper protection for labor of seamstresses, &c., in making up the garments. The present law affords no such protection, the duty being the same on the made-up garment as on the material from which it is made. It will be noticed that the provision proposed covers ready-made garments made from other vegetable material as well as from cotton, including linen goods.

The paragraph for laces, embroideries, &c., while providing the same rate as at present imposed on these articles made of cotton, also includes those made of other vegetable material now dutiable (for some unknown reason) at only 30 per cent., although they include the fine and expensive linen laces of Belgium, which are luxuries.

The provision for compound (specific and ad valorem) rates on Hamburg embroideries, laces, &c., is adopted from the letter of acting Secretary Fairchild to the chairman of the Committee on Ways and Means, dated June 14, 1886; also the provision for other laces, embroideries, insertings, &c.

OIL-CLOTH FOUNDATION, ETC.

The rate proposed is a reduction of 5 per cent., which (it is thought) is justified by the proposed reduction of 10 per cent. on jute.

GUNNY CLOTH.

The reduction on this article is 25 per cent. to 33 per cent. of the present rates, which are 3 and 4 cents per pound, according to value. These reductions are based on the exemption from duty of jute butts, from which the article is made.

BAGS AND BAGGING, EXCEPT FOR COTTON.

It is thought that the reduction of 5 per cent proposed is compen-

sated for by the exemption of jute butts from duty, and by the reduction of the rate on jute from 20 per cent. to 10 per cent.

BAGGING FOR COTTON.

The reduction proposed is one-fourth of a cent per pound on each of the two classes. It is also compensated for by the exemption of jute butts and the reduction of the duty on jute.

JUTE.

The present rate is 20 per cent. The rate proposed is equal to the ad valorem equivalent of the specific rates on flax.

SILKS.

This schedule is the one recommended to the chairman of the Committee on Ways and Means by Acting Secretary Fairchild on the 14th of June, 1886, except the provisions relating to wearing apparel and umbrellas and parasols, which are deemed no more than a just discrimination in favor of those engaged in those branches of skilled labor in the United States. Under the existing tariff no such discrimination is made, the manufactured article being admitted at the same rates as the piece goods from which made, thus placing our skilled work people on the same basis as to wages as the lower-paid labor of the Old World.

GLOVES.

The glove schedule is precisely as recommended by Acting Secretary Fairchild to the chairman of the Committee on Ways and Means.

WOOL.

The average duty collected on wool of class 3 in 1884 was 3.13 cents per pound, and in 1885, 2.78 cents per pound, the average during the two years being substantially 3 cents per pound, which is the rate proposed in the bill. As prices during these years were abnormally depressed, and as large quantities of this wool were undervalued to escape the higher rate of 5 cents per pound, it is thought that the rate proposed is below rather than above what it should be.

The advantage of substituting a single rate for the existing double rates would be to place all importers upon the same footing, and put a stop to the frauds which have been so long and extensively practiced, and which have caused the Government and all concerned so much trouble. It would also enable our carpet manufacturers to import much cleaner and better, and therefore more economical, stock than they have been enabled to obtain heretofore, at a price that would allow them to enter it honestly at the lower rate of duty.

The late protracted controversy respecting Donskoi wools illustrates the need of a legislative definition of the term "scoured" as applied to wool. From the evidence submitted to the Treasury Department it appears that certain of those wools have been admitted as "washed" when containing less than 7 per cent. of dirt, grease, or other foreign matter, while other wools of the higher classes have been imported and sold in our markets as "scoured" when containing as much as 15 per cent. of dirt, grease, &c. The effect of the proposed provision on this subject would, therefore, be to exclude considerable wool of class 3, heretofore imported as "washed" wool, much of which is used for purposes other than carpet stock, and not only displaces our better grades of home-grown wool, but depresses its market value.

About one-third of the importations of wool of class 3 in 1885 were of so-called "washed" wool. It is estimated that the exclusion of this article under the proposed provision would cause a reduction of revenue from that source of fully $300,000 per annum.

The provision for carded or combed wool, or "tops," is intended to prevent the importation of wool in these advanced forms at the rate provided for scoured wool, and thereby protect our skilled operatives engaged in that branch of labor, as well as our domestic wool. There being no provision of law for carded or combed wool, or "tops," the Treasury Department has held such importations to be dutiable at double the rate provided for scoured wool. Still, the courts may not sustain this ruling.

Attached to this statement, as an appendix, I submit some exhaustive statistics, obtained at the Statistical Bureau, and from its publications, touching the wool product of the United States.

WOOLENS AND WORSTED CLOTHS.

The proposition to put worsted cloths along with woolen cloths is a measure imperatively demanded in the interests alike of our domestic wool-manufacturing industry and of our wool-growers, and would correct one of the most glaring and hurtful inequalities in our present tariff. The rates proposed are the same as at present imposed upon woolen cloths, except that the minimum of value is fixed at 60 cents per pound instead of 80 cents, with an ad valorem rate of 30 per cent. instead of 35 per cent. This amendment of the present law, together with that increasing the rates on ready-made clothing and wearing apparel of wool, would give increased employment and compensation to a vast number of skilled and needy work people, would start anew a large number of establishments now closed, and would greatly benefit our wool-growers, as the effect would be to largely reduce the importations of these foreign articles, and the money now sent abroad for them would be kept at home. It is believed that the revenues would be reduced fully $1,500,000 next year from the diminished importations of worsted cloths and made-up wearing apparel of wool.

FLANNELS, BLANKETS, ETC.

This paragraph is simply changed in phraseology so as to make its meaning plainer, without any change in rates. The rates on yarns should be advanced; in fact, the whole schedule should be revised and recast; but the data for doing this properly is not at hand.

WOMEN'S AND CHILDREN'S DRESS GOODS.

The only change in this paragraph from existing law is in the proviso clearing up an ambiguity which has caused litigation, it having been claimed, and held, that the proviso related only to the goods last mentioned in the paragraph, instead of to all included in the paragraph.

READY-MADE CLOTHING, ETC.

The consolidation of the two provisions of the existing law covering articles of the same general class will simplify administration and save much trouble hitherto experienced in the application of these two provisions. The rates proposed are a slight increase over those now imposed, but are no more than sufficient to cover the cost of labor bestowed on these articles, it being assumed that these garments are made chiefly from the cloths which pay duty at 35 cents per pound and 40 per cent. ad valorem.

Much of the labor employed in making garments of the classes provided for by this paragraph is of the most necessitous class in our large cities, and under the present law it has been exposed to the competition of the lower-paid labor of Europe.

MARBLE.

The reduction in rates proposed are 15 cents per cubic foot on block, rough or squared, and 10 cents per cubic foot on veined marble, sawed, dressed, &c. The ad valorem equivalents of the rates now imposed are about 57 per cent. and 55 per cent. respectively. The rates proposed appear to be fully sufficient upon a raw material so largely used in the country.

SALT.

It is proposed to reduce the rate on this article in packages from 12 cents per 100 pounds to 10 cents per 100 pounds, and in bulk from 8 cents to 4 cents per 100 pounds. Ten cents per 100 pounds on salt in packages, would be equal to 33⅓ per cent. ad valorem, and 4 cents per 100 pounds on bulk salt would be equal to about 43 per cent. ad valorem. This would seem to be a sufficient duty to be imposed on an article of universal consumption.

DISTILLED SPIRITS, ALCOHOL.

If section 7 of the bill should become a law it would greatly benefit all the manufacturing industries producing articles in which distilled spirits, or alcohol, is a component, and would soon increase considerably the home market for distilled spirits, or alcohol, for these uses. It would also result in large reductions in the importations of foreign articles, made wholly or in part from distilled spirits or alcohol, as our manufacturers would supply the home demand at considerably reduced prices; at the same time very material reductions in rates of duty on a great many articles (chiefly in Schedule A, Chemicals) could be made.

DRAWBACK ON SUGAR AND MOLASSES.

The proviso to section 11 of the bill restricting the allowance of drawback on sugar and molasses to the amount of duty collected by polariscopic test would operate to prevent abuses from the allowance of more drawback than the duty collected. Nothing could be more rational or just than to apply the same test in both cases, and to restrict the allowance in any case to the amount of duty collected on sugar testing 100°, which is the highest possible percentage of saccharine strength. At present the highest rate of duty collectable on sugars by the polariscopic test is $2.40 per 100 pounds; yet, under existing drawback regulations, the drawback allowed upon hard refined sugar, which can not test above 100°, is $2.82 per 100 pounds, or 42 cents per 100 pounds more than could have been collected upon the same amount of saccharine matter when imported.

INCREASE OF CUSTOMS REVENUE.

Attention has been directed to the increase of customs revenue received during the fiscal year just closed, as compared with 1885. It may be interesting to some to know from what sources this increase of revenue came. An examination of the official reports for the ten months ending April, 1886, shows the increase to have come chiefly from the following articles:

INCREASE IN VALUE OF IMPORTATIONS.

Breadstuffs (chiefly barley)	$924,404
Bristles	159,878
Chemicals	1,347,678
Copper ore	68,000
Corsets	44,714
Cotton cloths	877,730
Embroideries, laces, &c	1,272,451
Fish	1,100,000
Fruits and nuts	860,000
Dressed furs, &c	900,000
Pig-iron	866,878
Iron ore	200,000
Steel rails (increase in tons over 1885, 3,587).	
Ingots, blooms, &c. (increase in pounds over 1885, 74,343,290).	
Tin plates (increase in pounds over 1885, 32,867,585).	
Wire rods	305,000
Precious stones	2,100,000
Leather	900,000
Kid gloves	920,000

Tobacco (increase in pounds over 1885, 3,472,159).
Wines $452,303
Vegetables, pickles, &c 643,638

Wools, classes 1 and 2: Increase in pounds, 31,650,746 over first ten months of 1885.

Wools, class 3: Increase in ten months of 26,805,998 pounds. This is a total increase of 58,457,744 pounds of all classes, or more than double the importations for same period in 1885.

Manufactures of wool: Increase in value in ten months, $3,673,145. This vast increase is chiefly in yarns, worsted coatings, and women's and children's dress goods.

The bill is designed to reduce especially the importations of these very articles, from the importation of which our domestic manufacturers, as well as wool-growers, are suffering so much. The bill would also largely reduce the importations of wool of class 3, a large proportion of which were of Donskoi, which it is claimed was "scoured," and competes with much of our domestic wool.

According to these figures, over $5,000,000 of the increased duties collected during the fiscal year just closed was derived from wool and manufactures of wool.

In the preparation of this bill touching customs duties, I have counseled with many of the acknowledged experts of the country on the subject of tariff legislation, and paid strict attention to the utterances of the convention which placed Mr. Cleveland as a Presidential candidate before the American people.

The bill is not as full a revision as is desired, yet the effort is made in that direction. While its provisions prevent the building up of one American industry at the expense of another, it uses the necessity of taxation to guard the labor of this country against the lower-paid labor of the countries with which we trade, especially Great Britain, and to avoid "an increasing flood of manufactured goods." An effort is at the same time made to relieve our people from the "crushing war taxes which have paralyzed business, crippled industry, and deprived labor of employment and of just reward."

The measure proposed realizes "that legislation affecting the operations of the people should be cautious and conservative in method, not in advance of public opinion but responsive to its demands," and to do only what the party to which I belong is pledged, "to revise the tariff in a spirit of fairness to all interests," and "that in making reduction in taxes it is not proposed to injure any domestic industries, but rather to promote their healthy growth."

In the effort to reduce the amount of taxes collected from the people through the internal-revenue laws the fact is realized that "from the foundation of this Government taxes collected at the custom-house have been the chief source of Federal revenue," and that "such they must continue to be."

I desire to call back the mind of the House of Representatives to the fact, as stated in the Democratic platform of 1884, where it asseverated that "many industries have come to rely upon legislation for successful continuance, so that any change of law must be at every step regardful of the labor and capital thus involved. The process of reform must be subject in the execution to this plain dictate of justice," and that "the necessary reduction in taxation can and must be effected without depriving American labor of the ability to compete successfully with foreign labor, and without imposing lower rates of duty than will be ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country."

In the preparation of the bill the effort has been made to adhere rigidly to the foregoing pledges given to the American people and upon which success came to the party making them after an absence from power of a quarter of a century. The same party platform said that "the system of direct taxation known as the internal revenue is a war tax," and impliedly gave assurance of its early repeal, and that while it continued it should be devoted to the payment of the burdens of the war. It is now far in excess of the amount necessary to pay the pension-list, and its repeal in part should come at an early day. The fair construction of the platform from which such full quotation has been made means this if it means anything.

The principle recognized in this bill I believe to be in harmony not only with the national platform of the party to which I belong, adopted at Chicago in 1884 on this subject, but to be also in accordance with the utterances of Mr. Cleveland during his canvass—notably when, at Newark, N. J., on October 28, 1884, he used the following language:

When we consider the city of Newark we find a municipality ranking as the fourteenth in population among all the cities of the land. It leads every other city in three important industries; it is second only in another, and third in still another.

Of course all those industries necessitate the existence of a large laboring population. This forms, in my opinion, a further element of strength and greatness in the state. No part of the community should be more interested in a wise and just administration of their government, none should be better informed as to their needs and rights, and none should be guarded more vigilantly against the smooth pretenses of false friends.

In common with all other citizens, they should desire an honest and economical management of public affairs. It is quite plain, too, that the people have a right to demand that no more money should be taken from them, directly or indirectly, for public uses than is necessary for this purpose. Indeed, the right of the Government to exact tribute from the citizen is limited to its actual necessities; and every cent taken from the people beyond that required for their protection by the Government is no better than robbery. We surely must condemn, then, a system which takes from the pockets of the people millions of dollars not needed for the support of the Government and which tempts to the inauguration of corrupt schemes and extravagant expenditures.

The Democratic party has declared that "all taxation shall be limited by the requirements of economical government." This is plain and direct. And it distinctly recognizes the value of labor and its right to governmental care when it further declares that the necessary reduction in taxation and the limitation thereof to the country's needs should be effected without depriving American labor of the ability to compete successfully with foreign labor and without injuring the interests of our laboring population.

At this time, when the suffrages of the laboring men are so industriously sought, they should, by careful inquiry, it seems to me, discover the party pledged to the protection of their interests, and which recognizes in their labor something most valuable to the prosperity of the country and primarily entitled to its care and protection. An intelligent examination will lead them to the exercise of their privileges as citizens in furtherance of their interests and the welfare of their country. An unthinking and slothful performance of their duty at the ballot-box will result in their injury and betrayal.

I may be permitted to quote from President Cleveland's annual message to Congress, wherein he made use of the following language on the subject of tariff legislation:

The fact that our revenues are in excess of the actual needs of an economical administration of the Government, justifies a reduction in the amount exacted from the people for its support. Our Government is but the means established by the will of a free people, by which certain principles are applied which they have adopted for their benefit and protection; and it is never better administered and its true spirit is never better observed than when the people's taxation for its support is scrupulously limited to the actual necessity of expenditure, and distributed according to a just and equitable plan.

The proposition with which we have to deal is the reduction of the revenue received by the Government, and indirectly paid by the people for customs duties. The question of free trade is not involved, nor is there now any occasion for the general discussion of the wisdom or expediency of a protective system.

Justice and fairness dictate that in any modification of our present laws relating to revenue, the industries and interests which have been encouraged by such laws, and in which our citizens have large investments, should not be ruthlessly injured or destroyed. We should also deal with the subject in such manner as to protect the interests of American labor, which is the capital of our workingmen; its stability and proper remuneration furnish the most justifiable pretext for a protective policy.

My views heretofore expressed on this floor as to the propriety of a gradual repeal of our internal-revenue system have undergone no change, and I may be allowed at this time to repeat my remarks and renew citations made at the time to which I allude:

With Albert Gallatin I have regarded the excise or internal-revenue taxes as offensive to the genius of our people, and tolerated by the framers of the Constitution only as a measure of necessity in the emergency of war, and that just so soon as the occasion for them had passed away they should cease to exist. He and Thomas Jefferson, as the very first act of Jefferson's administration, secured a repeal of internal taxes and relieved the people from their inequality, inquisitorial annoyances, and hordes of officials clothed with dangerous powers. Only in these latter days have I heard men calmly claim these war taxes are still necessary—a generation after the war which gave rise to them had closed. And it is a very suggestive and suspicious feature of the affair that those upon whom the tax is laid clamor loudly against its being taken off, regarding it no doubt as a protection against competition to the large monopolies.

To substantiate the ground taken by me in that letter, I will refer to two authorities. I will read first from Blackstone's Commentaries (book 1, pages 317–318) to show excise is a war tax:

But at the same time the rigor and arbitrary proceedings of excise laws seem hardly compatible with the temper of a free nation. For the frauds that might be committed in this branch of the revenue, unless a strict watch is kept, make it necessary, wherever it is established, to give the officers the power of entering and searching the houses of such as deal in excisable commodities at any hour of the day, and, in many cases, of the night likewise. And the proceedings in case of transgression are summary and sudden.

* * * * * * *

However, its "original establishment was in 1643, and its progress was gradual, both sides protesting it should continue no longer than to the end of the war, and then be utterly abolished. * * * But from its first origin to the present time its very name has been odious to the people of England." It has been kept up, however, to supply the enormous sums necessary to carry on the continental wars of Europe.

So believed Jefferson; and let us next see what he did. I read from Schouler's History of the United States, volume 2, page 21:

In economy and retrenchment the President had already made a beginning by reducing the diplomatic establishment and consolidating some revenue offices subject to executive control. The movement now contemplated was to abolish that whole system of internal taxation, which he had heartily detested as tyrannous, burdensome, and liable to abuse of patronage, which had always been unpopular in the Middle and Southern country, and which cost more than the first three years' net produce to put down resistance to its collection. But excise receipts had risen gradually to the neighborhood of $1,000,000, and many feared that the Treasury would suffer if this resource was suddenly cut off. Jefferson had, however, gone over the ground carefully with Secretary Gallatin; against the present yield of the internal taxes they set off what the Government might safely economize elsewhere. Customs duties alone would, as they correctly surmised, supply a revenue sufficient to support the Federal establishment, and, besides paying interest on the public debt, extinguish its principal, should peace continue, in fifteen or eighteen years. Federalists were incredulous, and those with friends in place tried to induce a repeal only partial at most, but the ax was laid to the root, and with the downfall of this system went about half the offices at the disposal of the administration.

The Committee on Ways and Means of this House either by silence or else by adverse reports have given to the country no hope of a release from any of these internal taxes. We must therefore look to the body of this House for relief from the "burdens" of this character of taxation. These taxes are offensive and dangerous.

Our people have become accustomed to import duties; it has proved to be the easiest, safest, and best method of taxation; it causes no friction or comparatively little.

Those who seek the repeal of internal taxes are in accord with our Democratic platforms since the war, and especially in harmony with the Democratic party utterances in the great States of Virginia, Ohio,

North Carolina, New Jersey, West Virginia, and Pennsylvania, and I believe in these respects it is our "bounden duty with honorable alacrity to do exactly what we promised."

I am unable to find in any of our party declarations anything like approval of "a firm first step toward free trade, with attendant internal and direct taxation." These declarations are all in favor of building our tariff laws upon the principle of incidental protection to American labor and American industry.

When I consider the extent of this country, the diversity of its resources, the industry and energy of its people, the greatness and value of its products, its rapid growth and solid prosperty, I rejoice it is so great. Political doctrinaires have issued their mandates, and the country has been told it would perish if they were not obeyed. But the country has gone on growing greater every year. Even a civil war was powerless to stay its progress. On the contrary, with a power which seemed to be born of its difficulties, overleaping all barriers, the country has placed itself among the first nations of the world. To-day it dominates a continent, and everywhere within its borders are people peacefully engaged in developing their material interests. Guided by experience, true to the instincts of our history, faithful to their own land and its traditions, with habits of industry and frugality, the future is secure.

In the way of needed revenue legislation a proposition was submitted by me to the House In due course it was referred to the Committee on Ways and Means. It was reported back adversely, and the report which accompanied it was disfigured by an affectation of superior knowledge and judgment, and by personalities which would be out of place in a stump speech.

Dismissing further notice of these characteristics of the report, I shall proceed calmly to review the legitimate objections which are made to the subject-matter of that bill.

It is alleged that I was inconsistent in having within half a month introduced a bill to reduce excessive revenues and in informing the House that there would be no excessive revenues to reduce. It is true that I did warn the House against making such extravagant appropriations as would render it impracticable, if not impossible, for us to fulfill our pledges to the country to reduce the volume of Federal taxation and afford an excuse for the passage of some tariff measure which, by sweeping and radical reduction of rates and the substitution of easily evaded ad valorem for specific duties, would flood the country with importations, thereby not only largely increasing the revenue, but tending to extravagant expenditures; at the same time destroying domestic industry and draining the country of money to pay for foreign goods.

It is also true that within a short time of giving that warning I did introduce a measure calculated, as I think and believe, to reduce the revenue some $40,000,000. I am charged with proposing to reduce the revenue to such an extent as to produce a deficit, and yet in the next breath my measure is condemned because it does not relieve the burden of Federal taxation sufficiently; and it is stated that it does not comprehend a method whereby taxation may be reduced and removed without diminishing the revenue. I am not blind to the fact that according to the views entertained by the majority of the Committee on Ways and Means the reduction of rates of duty on foreign products is equivalent in all cases to a removal of tax or burden on the people.

This theory is perhaps correct so far as it relates to articles which are not successfully produced or which can not be successfully produced in this country, but not correct as a rule in regard to articles which are or can be successfully produced by our people. For example, a reduction of say 10 per cent. in the rate of duty on an article may stop its production entirely in the United States, drive the labor employed upon it into other pursuits, and thus enable the foreign producer to control our market and make the consumers of the country pay a large percentage more for the article than before the duty was reduced. Thus a reduction in the rate of duty would amount to a tax and burden on our people instead of proving a measure of relief.

It will not be forgotten that early in the present session the chairman of the Committee on Ways and Means introduced an elaborate tariff bill, a prominent feature of which was a reduction of rates on articles in the metal schedules. In the measure introduced by me, I adopted substantially the rates proposed in the chairman's bill on a large number of those articles, yet the report characterizes these as "few and unimportant," such as "may well be made when the condition of the Treasury justifies it." Included in these "few and unimportant" articles are iron and steel railway bars, railway fish-plates, steel wheels and tires for locomotives, iron or steel ingots for railway purposes, beams, girders, joists and other structural iron and steel manufactures, sheet-iron, horseshoe nails, lead, zinc, and various other articles concerning the rates about which we have heard more complaint than about almost anything else on the dutiable list.

Why did not the chairman of the Committee on Ways and Means discover that these were "few and unimportant" before he introduced the bill that he was so long in preparing? If the bill did all he proposes, he is not the one who can object.

There are some fifty articles of constant, necessary, and important use, on which the bill introduced proposed to reduce the rates of duty, and on which the existing rates range from the equivalent of about 46 to 180 per cent. ad valorem, averaging about 70 per cent. I considered these rates too high. They could be reduced in the interest of the consumers without hurt to labor and without injury to capital other than a reduction of profits on the money so invested. Important among these articles are steel rails, the proposed reduction on which (calculating the annual production at 1,500,000 tons) would amount to a saving of $6,000,000 annually to the consumers, provided the demand (as would be probable) forced the price up to the extent of the duty imposed, and to a point where the foreign manufacturer could not successfully compete.

I am charged with having introduced a measure of "protection for the sake of protection," when, as a matter of fact, I propose to reduce largely excessive protective rates on some fifty imported articles, to increase the rates on but a few, to a point only where the taxing power would secure their successful production in this country, so as to relieve us in peace or war from dependence on Europe, give home labor employment, and finally give better articles to our consumers at less cost.

The majority of the Committee on Ways and Means propose to reduce the revenue or entirely remove duties on such articles only as now enter into severe competition with domestic productions, while they decline to to reduce much higher and purely protective rates on other articles. So that, with all their revenue-reform, they themselves, are found in the attitude of favoring protection for protection's sake. They leave untouched protective duties ranging from an equivalent of 53 to 181 per cent. ad valorem on such articles as iron and steel rails, fish plates, horseshoe nails, iron and steel girders and joists, iron and steel ingots for railway purposes, lead and manufactures of lead, zinc, iron and steel wire, wire netting and wire rope, whiting, castor oil, block marble, and a variety of common paints. Yet they reduce the rates on manufactures of wool, cotton, hemp, and flax, which pay the equivalent of only from 25 to 80 per cent. ad valorem, the importations of which are immense and constantly increasing. They propose to exempt from duty wools paying on the average the equivalent of from 25.41 to 45.32 per cent. ad valorem, and flax and hemp paying on an average the equivalent of only about 9 per cent. ad valorem. Yet they do not disturb the rates on such other agricultural products as rice, peanuts, castor beans, and hops, which pay an equivalent respectively of 90, 78, 48, and 31 per cent. ad valorem.

The adverse report alleges that the bill introduced by me "so largely increases the tax on woolen cloths and goods as to further prevent importations from abroad and to add to the cost of woolen clothing at home," whereas, in point of fact, the bill reduces taxes on woolen cloths by lowering the minimum of value from 80 cents per pound to 60 cents per pound, and by reducing the pound rate thereon from 35 cents to 30 cents. The only articles in the schedule of wool manufactures in which the bill increases the rate are worsted cloths and wearing apparel. This is done to correct two glaring and most hurtful inequalities of the present tariff, one of which places the finer and more popular article—worsted cloths—at lower rates than are imposed on the coarser article—woolen cloths—both of which are made from wool and in instances from the same kind of wool. The other imposes practically the same rate of duty on ready-made clothing as on the cloth from which it is made—a positive discrimination in favor of foreign production as against domestic industry. The worsted-cloth industry of this country is being destroyed under existing law, because of these unequal rates, and consequent enormous importation of such articles, which increased in value nearly $4,000,000 during the fiscal year just closed, over the fiscal year of 1885. The importations of ready-made wearing apparel are constantly increasing, and the wages of our tailors and seamstresses are being lowered.

Every intelligent man knows, and every honest one will admit, that under the tariffs of the past twenty-five years the cost to the consumer of the manufactures of wool has been vastly reduced; and the manufactures were never so good and so cheap as now. It is a fact well known that the ad valorem features of the combined rates on manufactures of wool have been quite largely evaded of late years, thereby largely depriving our domestic manufacturers of the defense against the cheap labor of the Old World which these rates were intended to secure. Nevertheless, the highest rate of duty imposed by the bill reported favorably to the House by the Committee on Ways and Means on manufactures of wool, is 35 per cent. ad valorem, which, if honestly collected, would properly compensate for the difference in cost of labor between this country and Europe, as to some articles, while as to many, including wearing apparel, it would not be sufficient.

The proposition presented in the committee's bill to levy a uniform ad valorem rate on the widely-varying articles embraced in the schedule of manufactures of wool can neither be fairly explained nor defended. The same rate is laid on the "poor man's blanket" as on the fine made-up garments of the rich. The same rate is laid on yarns as on fine cloths and ready-made clothing. The same rate is laid on shoddy cloths as on such fancy articles as fringes, galloons, gimps, cords, tassels, and ladies' headwear. It may be contended that under a uniform ad valorem rate the article would pay duty according to its value or the amount of labor bestowed upon it. This does not, however, meet the case, for

it not only puts the labor of this country at an actual disadvantage with the labor of Europe, but it subjects us to a further injury from the undervaluation of the foreign article in proportion to its price.

The effect of the bill reported favorably would be to close many of our mills. It would inevitably throw out of employment a large number of tailors and sewing-women now employed in the large clothing establishments of the country. It might almost be said that it would be a measure of protection to foreign labor and foreign capital. I believe that the men interested in important Southern agricultural industries, and who ask the continuance of rates in the interest of their agricultural products, should be ready to accord as many necessary though lower rates to their brother agriculturists in other sections of the country.

It is objected that the bill introduced by me only changes the rate of duty or tax on articles yielding less than one-tenth ($17,000,000) of the $181,000,000 received from customs during the fiscal year 1885. This is an objection to the extent rather than to the quality of the measure. In other words, the committee think the bill too small. The bill was a modest measure, and, as I have already said, was not considered as a complete and perfect measure of tariff revision, but merely a fair step in the right direction. If the committee had carefully considered the bill itself, instead of merely consulting the tabular statement accompanying it, they would have found that it proposed changes or reductions of duties on articles which yielded more than $40,000,000 of customs revenue in 1885. They altogether overlooked the fact that the recommendations of Acting Secretary Fairchild respecting changes in rates on silks, leather gloves, laces, and embroideries, as well as Mr. HEWITT's proposition relating to tobacco, hatter's trimmings, wearing apparel and personal effects, cartons, coverings, and other articles not included in the tabular statement, were made part of the bill which they condemned.

The Committee on Ways and Means claim to be the champion of free raw material for use in all our manufacturing industries; yet these gentlemen object seriously to my proposition to relieve from internal taxes domestic distilled spirits used in the arts, such as productions of coal-tar, dye-stuffs, varnishes, paints, patent medicines, medicinal preparations, and a vast line of other medical productions, for the purchase of which many millions of dollars are annually sent out of the country, and which without the tax on spirits used in their production would be made at home, and large quantities might be exported.

The adverse report estimates the internal-revenue tax on spirits that would be thus used at $10,000,000 annually. If this be so, it is a greater burden by one-half on domestic industries to our consumers than the much-talked-of customs on wool, hemp, jute, manila, and all other fibrous compounds, the duties on all of which amounted to $5,111,555.35 during the fiscal year 1885. The rate of duty on these articles ranges only from an equivalent of 7 to 46 per cent. ad valorem, while on a barrel of distilled spirits, of say, 46 gallons, costing $95.22, or $2.07 per gallon, the internal taxes equal, say, $77.40, leaving only $17.82 as the untaxed value of that raw material. The estimates of the committee, however, as to the amount of the tax on spirits that would be used in the arts are purely conjectural. I question if they have any reliable data going to show that $10,000,000 would be the amount. I think it would be a much less sum.

The reference in the report to my proposition to levy a specific duty of 1 cent per pound instead of the 35 per cent. ad valorem on cotton ties or hoops for baling purposes, I beg to notice. I assert that the adoption of the proposed rate would not increase the cost to the consumer nor reduce the price received by the producer for his cotton. If the proposed rate were adopted it would secure the revenues from fraud, and would enable our iron manufacturers in Alabama and elsewhere South, as well as in the North, to make the article and supply it to consumers at less than the cost of ocean freight, exchange, commission, &c. The same is true as to other descriptions of iron and steel and other articles the rates on which it is proposed to change from ad valorem to specific, and which show an apparent advance based on ad valorem equivalents, because the articles have been enormously undervalued. Those who seek free trade in the United States are uniformly opposed to specific duties.

The Committee on Ways and Means warmly favor ad valorem rates, and have stoutly antagonized the recommendations in the direction of specific duties so urgently made by Secretary Manning and acting Secretary Fairchild. They have likewise hindered the passage of the admirable administrative measure proposed by Mr. HEWITT and approved by the Secretary of the Treasury. This opposition is without justification. The adoption of those features would render customs taxes less disagreeable by putting a stop to fraud, insuring an honest collection of the revenue, and diverting importations from dishonest representatives of foreign houses to honest and legitimate distributing merchants throughout the country.

I do not impute any motive lacking in patriotism to those who refuse to permit the separate enactment of those administrative clauses of the bill reported from the Committee on Ways and Means, but I can not shut my eyes to the fact that a majority of the Committee on Ways and Means seem to have determined that unless their own peculiar views can be incorporated into law in regard to customs taxation, and a continuance of the internal-revenue system without reduction or modification, they will prevent any reform in this connection.

The adverse report on the bill I introduced has been and probably will be extensively circulated as far as possible to impress the public mind in the direction of its views. I do not object to that, for I have every confidence that when judgment is made up between these two propositions the conservative plan proposed by me, which is really in harmony with our party utterances and with the traditions of our history, will receive the approval of an intelligent people.

APPENDIX A.

That the wool interest of the United States may be more fully understood and that "legislation affecting" this great industry "should be cautious and conservative in method" and "in a spirit of fairness," I have caused to be compiled the following statistics on the subject:

SHEEP AND WOOL.

The wool interest of the United States is extremely sensitive to changes in the tariff. The tariff on raw wool as imposed at different periods in the history of the Government is shown in the following table of rates from the quarterly report of the Chief of the Bureau of Statistics, No. 3, 1884–1885, page 566.

Rates of duty imposed on wool by the various acts of Congress from 1789–1883.

Date of act of Congress.	Date on which tariff went into effect.	Rates of duty
July 4, 1789	July 4, 1789	Free.
Apr. 27, 1816	July 1, 1816	15 per cent. ad valorem.
May 22, 1824	July 1, 1824	Value not exceeding 10 cents per pound, 15 per cent. ad valorem.
	July 1, 1824	Value exceeding 10 cents per pound, 20 per cent. ad valorem.
	June 1, 1825	25 per cent. ad valorem.
	June 1, 1826	30 per cent. ad valorem.
May 19, 1828	Sept. 1, 1828	4 cents per pound and 40 per cent. ad valorem.
	July 1, 1829	4 cents per pound and 45 per cent. ad valorem.
	July 1, 1830	4 cents per pound and 50 per cent. ad valorem.
July 14, 1832	Mar. 3, 1833	Value not over 8 cents per pound, free.
		Over 8 cents per pound, 4 cents per pound and 40 per cent.
Mar. 2, 1833	Jan. 1, 1836	Not over 8 cents per pound, free.
		Over 8 cents per pound, 4 cents per pound and 38 per cent.
	Jan. 1, 1838	Over 8 cents per pound, 4 cents per pound and 36 per cent.
	Jan. 1, 1840	Over 8 cents per pound, 4 cents per pound and 34 per cent.
	Jan. 1, 1842	Over 8 cents per pound, 4 cents per pound and 27 per cent.
	July 1, 1842	Over 8 cents per pound, 4 cents per pound and 20 per cent.
Aug. 30, 1842	Aug. 30, 1842	Value not over 7 cents per pound, 5 per cent. ad valorem.
		Over 7 cents per pound, 3 cents per pound and 30 per cent.
July 30, 1846	Dec. 1, 1846	Thibet, Angora, and other goats' hair or mohair, 20 per cent. ad valorem.
		All other 30 per cent. ad valorem
Mar. 3, 1857	July 1, 1857	Value of 20 cents per pound and less, free.
		Angora, Thibet, &c., over 20 cents, 15 per cent.
		All other over 20 cents, 24 per cent.
Mar. 2, 1861	Apr. 1, 1861	Sheep-skins with wool on, 15 per cent.
		Value less than 18 cents per pound, 5 per cent.
		18 cents and not over 24 cents per pound, 3 cents per pound.
		Over 24 cents, 9 cents per pound.
June 30, 1864	July 1, 1864	Sheep-skins with wool on, 20 per cent.
		Value per pound 12 cents or less, 3 cents per pound.
		Over 12 cents and not over 24 cents, 6 cents per pound.
		Over 24 cents and not over 32 cents, 10 cents per pound and 10 per cent. ad valorem.
		Over 32 cents, 12 cents per pound and 10 per cent. ad valorem.
		Wools scoured treble the amount of duty.
Mar. 2, 1867	Mar. 2, 1867	Clothing wools, 32 cents or less, 10 cents per pound and 11 per cent. ad valorem.
		Over 32 cents, 12 cents per pound and 10 per cent. ad valorem.
		Washed, twice the amount of duty.
Mar. 2, 1867	Mar. 2, 1867	Combing wool, 32 cents or less, 10 cents per pound and 11 per cent. ad valorem.
		Over 32 cents, 12 cents per pound and 10 per cent. ad valorem.
		Carpet wool, 12 cents or less, 3 cents per pound.
		Over 12 cents, 6 cents per pound.
		All classes scoured, treble duty.
		Sheep and goat skins with wool on, 30 per cent. ad valorem.
July 14, 1870	Jan. 1, 1871	Wools on skin, to be dutiable at the same rate as other wools.
June 6, 1872	Aug. 1, 1872	Reduction of 10 per cent. on all duties.
Mar. 3, 1875	Mar. 3, 1875	Rates under tariff of March 2, 1867, restored.
Mar. 3, 1883	July 1, 1883	Clothing wools, value of 30 cents or less, 10 cents per pound.
		Over 30 cents, 12 cents per pound.
		Washed, twice the amount of duty.
		Combing wools, value of 30 cents or less, 10 cents per pound.
		Over 30 cents, 12 cents per pound.
		Carpet wools, value of 12 cents or less, 2½ cents per pound.
		Over 12 cents, 5 cents per pound.
Mar. 3, 1883	July 1, 1883	Wools of all kinds scoured, treble the amount of duty.
		Wools on the skin same as other wools.

It will be observed that on August 1, 1867, all duties on wool were reduced 10 per cent. March 3, 1875, the rates of eight years before were restored. Under these rates the number of sheep in the country increased year by year until the effect of the tariff of 1883 began to be manifest. In 1880 the number of sheep in the United States corresponded to the number given as fleeces for each State in the following table, which also gives the amount of wool produced in each State:

Spring clip of wool for 1880.

[From United States census report.]

States and Territories.	Fleeces.	Weight.
	Number.	*Pounds.*

West Virginia	674,769	2,681,444
Wisconsin	1,336,807	7,016,491
Wyoming	140,225	691,650

Not including the following items, the result of special investigations: Texas and California fall clip of sheep reported on farms, 13,000,000 pounds; wool of other (ranch) sheep, 34,000,000 pounds; pulled wool and fleece of slaughtered sheep, 38,000,000 pounds; making an aggregate of 240,681,751 pounds.

A decrease in the number of sheep begins to show itself in the returns of 1885. In the report on the number and values of farm animals for January and February, 1885 (Agricultural Department), it is said that—

"There has been no increase of sheep husbandry. A small falling off is indicated 'in the farming States.' Only Connecticut, New Jersey, Delaware, Maryland, the Carolinas, Alabama, Kansas, and Nebraska, of all the farming States, hold the numbers of a year ago. Nebraska and Kansas are both agricultural and pastoral, and have made advances on the pastoral side, taking flocks from the extreme East. It is said that at least one-third of the flocks of Washington County, Pennsylvania, have been sent from the State, many going across the Missouri River. Our correspondent makes the loss 60 per cent. The slight reduction of the wool tariff has sent hundreds of thousands of sheep to the butcher or the range. Hon. G. V. Lawrence, Representative of that district in Congress, says:

"'The reduction of the tariff on wool by the act of Congress, near the close of the Forty-seventh Congress, in 1883, had a most injurious effect on this industry. The estimate of loss to the farmer on the wool crop of that year for our county alone was from $90,000 to $100,000 by the reduction in price. This discouraged many who had flocks, and they sold them and purchased cattle, and last fall prices continued so low that there was no profit to the wool-grower, and I have little doubt the number of sheep will still continue to decrease under the general depression, and I think this extended and important industry will ultimately be abandoned (or nearly so), unless a higher duty is placed on foreign wool than the present rate.'" (Page 4.)

The following exhibit shows the aggregate relations for the United States, as derived from the same authority:

Years.	Number of sheep.	Value.
1884	50,626,626	$119,902,706
1885	50,360,243	107,960,650
Decrease	266,383	11,942,056

This shows a loss in numbers of about one-half of 1 per cent., and a loss in values of a little over 9 per cent.

The following table is compiled from the report already cited, and brings sharply into view the changes in detail by States:

Table showing the estimated numbers of sheep on farms, &c., January and February, 1885.

States and Territories.	Per cent.*	Number.	Average price.	Value.

Total		50,360,243	2 14	107,960,650

*Total number compared with January, 1884.

Mr. J. R. Dodge, the Statistician, further says (page 5):

"Last year an increase was reported in the value of all farm animals except sheep and swine. In this return there is a decline in all values, in sympathy with the general depreciation, and as to sheep an additional depreciation on account of the change in the wool tariff." * * *

If we now turn to the estimates of the Agricultural Department as shown in the report on the numbers and values of farm animals for January and February, 1886, we shall find the decrease indicated the year before enormously greater, and we shall see that the transfer of the wool interests from the farming States with their careful methods and corresponding results to the wide ranges of the extreme West with their more wholesale methods and corresponding results is greatly emphasized. This report furnishes material for the following exhibit:

Decrease in number and value.

Years.	Number of sheep.	Value.
1885	50,360,243	$107,960,650
1886	48,322,331	92,443,867
Decrease	2,037,912	15,516,783

Mr. J. R. Dodge, the Statistician of the Department, thus sums up the situation for the year:

"Coming to sheep, it must be observed that sheep husbandry is in a period of deeper depression than any other animal industry of the country. The results of this inquiry manifest a loss of about two million sheep. The industry has been peculiarly susceptible to adverse influences, feeling keenly any depression of prices of wool. Values of both wool and mutton have been low, and flocks have been slaughtered in the farm States, or sent West to cheaper pasturage. It is estimated that Pennsylvania has lost in one year a fifth of her flocks, or nearly three hundred thousand sheep. The loss is the more serious, as it falls mainly on a region peculiarly adapted by its grasses and irregularities of surface for sheep farming, which has long stood in the forefront of improvement in wool-growing. The decline is almost universal east of the Mississippi.

"The ratio of loss will be seen to have rapidly increased as regards numbers of sheep, the per cent. of decrease for 1884 or to January, 1885, having been near one-half of 1 per cent., while for 1885 or to January, 1886, it was eightfold as great, or 4 per cent."

The following details by States are taken from the same report:

Table showing the estimated numbers of sheep on farms, &c., January and February, 1886.

*Year ended September 30, 1840.

The data as to production have been furnished by Mr. J. R. Dodge, Statistician of the Department of Agriculture.

The Department of Agriculture estimates the wool product of 1884 as 338,000,000 pounds. The wool product continued to increase in face of a diminution of sheep, partly at least through the fleeces of the very sheep slain and thus destroyed as a source of future supply. In 1885, however, this slaughtering had reached a marked effect in decreasing the product, which is roughly estimated in advance of final footings as about to show a deficiency of 10,000,000 pounds, as compared with the previous year.

The annual report of the chief of the Bureau of Statistics in regard to imported merchandise for the year ending June 30, 1886, furnishes data for the following summary, as to the imports of wool and woolen goods for the years 1883, 1884, 1885, showing the values and the duties paid (pages 114, 115).

Summary of articles of imported merchandise entered for consumption, &c., years ending June 30, 1883, 1884, and 1885.

Articles.	Year ending June 30—					
	1883.		1884.		1885.	
	Values.	Duties.	Values.	Duties.	Values.	Duties.
Wools, and manufactures of:						
Raw	$8,491,988 23	$3,174,628 02	$13,593,299 05	$4,522,825 82	$9,474,263 87	$3,164,295 96
Manufactures	42,552,455 99	29,146,264 50	41,484,871 80	27,478,400 05	36,176,705 44	24,294,938 90
Total	51,044,444 22	32,320,892 52	55,078,170 85	32,001,225 87	45,650,969 31	27,459,234 86

The report just cited furnishes also (pages 130–131) various particulars as to quantities of wool and woolen manufactures entered for consumption from 1867 to 1885, inclusive, with average rate of duty, ordinary duty received, consumption per capita and duty per capita, as shown in the following table:

Wool and manufactures of entered for consumption.

Year ending June 30—	Quantities.	Average rate of duty.	Ordinary duty received.	Consumption per capita.	Duty per capita.
	Pounds.		*Dollars.*		
1867	51,913,871	50.71 per cent.	16,327,661	143.36 cents.	72.71 cents.
1868	37,238,513	63.60 per cent.	23,684,048	101.21 cents.	64.37 cents.
1869	40,637,389	63.07 per cent.	25,632,041	107.63 cents.	67.89 cents.
1870	42,099,181	61.95 per cent.	26,082,101	109.18 cents.	67.64 cents.
1871	52,700,628	63.68 per cent.	33,564,479	133.23 cents.	84.85 cents.
1872	69,811,240	60.21 per cent.	42,031,077	171.69 cents.	103.51 cents.
1873	72,892,743	52.80 per cent.	38,490,629	174.78 cents.	92.22 cents.
1874	59,287,932	54.52 per cent.	32,326,863	138.34 cents.	75.43 cents.
1875	55,856,545	55.35 per cent.	30,914,037	126.77 cents.	70.16 cents.
1876	42,260,342	59.88 per cent.	25,306,314	93.25 cents.	55.84 cents.
1877	33,465,179	60.53 per cent.	20,258,038	71.77 cents.	43.45 cents.
1878	32,698,759	60.83 per cent.	19,890,945	68.15 cents.	41.45 cents.
1879	30,553,923	61.55 per cent.	18,805,340	61.86 cents.	38.07 cents.
1880	49,748,213	58.77 per cent.	29,238,370	99.20 cents.	58.30 cents.
1881	45,164,149	60.41 per cent.	27,285,625	87.76 cents.	53.02 cents.
1882	47,618,182	61.43 per cent.	29,253,016	90.19 cents.	55.40 cents.
1883	51,044,444	63.32 per cent.	32,320,893	94.24 cents.	59.67 cents.
1884	55,078,171	58.10 per cent.	32,000,226	99.14 cents.	57.60 cents.
1885	45,650,969	60.15 per cent.	27,459,235	79.96 cents.	48.10 cents.

Not only is a marked effect upon the wool industry of the country as a whole produced by changes in the tariff, but there are special local influences arising from the bearing of specified provisions affecting particular kinds of wool and of woolen manufactures, and thus developing results varying in different localities with the kind of sheep there most advantageously kept.

This will be more distinctly evident on inspection of tables and explanations here following from official sources.

Although the duties under the present law are specific it has been possible to calculate them in such a way as to make a comparable view of their relations on the basis of ad valorem charges.

The following table compiled from reports of the Bureau of Statistics shows separately the quantity and value of imported clothing wool, combing wool, and carpet wool entered for consumption in the United States, the amount of duty and the average ad valorem rate of duty collected thereon, during the years ended June 30, 1881, 1882, 1883, 1884, and 1885.

Year ended June 30—	Quantity.	Values.	Ordinary duty collected.	Average ad valorem rate of duty.
CLOTHING WOOLS.	*Pounds.*			*Per ct.*
1881	20,609,707	$4,751,454	$2,599,686	54.72
1882	13,489,923	3,042,407	1,693,078	55.64
1883	11,546,530	2,567,443	1,444,948	56.28
1884	20,703,843	4,700,605	2,111,279	44.91
1885	13,472,432	2,994,583	1,357,225	45.32
COMBING WOOLS.				
1881	4,421,491	1,271,332	585,500	46.07
1882	2,318,671	648,252	304,133	46.92
1883	1,373,114	343,987	176,181	51.22
1884	4,474,395	1,058,758	451,521	42.65
1885	3,891,914	921,252	394,908	42.87
CARPET WOOLS.				
1881	42,385,769	6,038,041	1,675,630	27.75
1882	47,208,175	6,642,699	1,857,442	27.96
1883	40,130,323	5,580,558	1,553,498	27.84
1884	62,525,692	7,833,935	1,960,025	25.02
1885	68,146,652	9,474,263	3,164,592	33.4

The reports of the Bureau of Statistics of the Treasury Department show how great a dependence for revenue the duty collected upon imported wool in raw and manufactured forms has come to be. Thus in the year ending June 30, 1883, the imports of wool and woolen manufactures entered for consumption stood third in the order of magnitude as to value, and second as to amount of duties collected thereon, constituting 15.42 per cent. of the total amount of duties collected from imports. (Quarterly Rep., No. 4, 1883-1884, p. 540.)

The ratios of clothing wool, combing wool, and carpet wool produced in the United States in 1883 were estimated by Mr. James Lynch in a communication to the Bureau of Statistics as a little over 72 per cent., 20 per cent., and 7 per cent. respectively. We may accept this estimate as a guide to our judgment upon the local interest of the various qualities. Were it possible to obtain anything like accurate figures they would be found to be modified by those changes which have reduced in such rapid ratio the wool interests of States east of the Mississippi, where wools of the grades above carpet wools predominated.

The following table shows the quantity of clothing wool, combing wool, and carpet wool produced in the United States, according to Mr. Lynch, in connection with the quantity of each class of wool as defined by the law imported into the country, the ad valorem rate of duty, the duty per pound, and the price per pound during the year ended June 30, 1883:

Description.	Produced in the United States during the calendar year 1883.	Imported into the United States during the year ended June 30, 1883.	Rate of duty during the year ended June 30, 1883.		Import price per pound.
			Rate per pound.	Ad valorem rate.	
	Pounds.	*Pounds.*	*Cents.*	*Per cent.*	*Cents.*
Clothing wool	233,000,000	11,546,530	12.51	56.28	22.24
Combing wool	65,000,000	1,373,114	12.83	51.22	25.05
Carpet wool	22,000,000	40,130,323	3.87	27.84	13.91

(Quarterly report Chief of Bureau of Statistics, No. 4, 1883-'84, page 544.)

In a communication printed in the report just cited Mr. J. R. Dodge explains the grades of wool as grown in the United States and distributed under the tariff classification. The clothing wools are merino of some degree, with the highest type of purity in Vermont, but almost exclusively prevailing in New York, Ohio, and Michigan, predominant in West Virginia, Western Pennsylvania, Texas, and in the Rocky Mountain and Pacific coast areas. The combing wools from which worsted yarns are made predominate in the South, except in the States already named as supplying clothing wool. The sheep are also known as the mutton breeds. In Kentucky they are estimated to be 99 per cent. of the whole number. The carpet wools in the United States are the product of the Mexican sheep which have been introduced as a foundation of ranch flocks, and in many cases improved by crossing so as to furnish a higher quality. (Page 550.)

According to Mauger & Avery, in the same report (page 553), Colorado and New Mexico produce about all the carpet wool grown in this country. The same parties state that the worsted manufacture is rapidly growing, from which it might be expected that the regions furnishing combing wools would find their markets bettered. The effect of the tariff of 1883, however, has modified that prospect, illustrating anew the disturbing influence of instability in our tariffs. The portion of the communication bearing on this point is here presented (pages 551, 552):

"105 AND 107 READE STREET, *New York, March* 17, 1884.

"DEAR SIR: Yours of the 14th is at hand and noted.

"The reduction of the tariff on worsted yarn has enabled the foreign manufacturers to send over their manufactures of fine worsted at figures which render their production here unprofitable, except at greatly reduced prices for the raw material.

"For this reason fine delaine fleeces are only salable at about the prices of clothing wools of the same quality and condition. We have written for full details on this subject, and in the course of a few days will be able to send you facts and figures in support of above statements.

"Domestic wools are graded into two classes, irrespective of grade, namely, clothing and combing wools.

"Delaine wool is really a combing wool, but generally of finer quality and shorter in staple than combing. It is used in the manufacture of the finer, softer grades of yarns. Worsted manufacturers have usually paid from 3 to 5 cents per pound more for selections of wool suitable for delaine; but since last summer the demand for this kind of domestic wool has slackened, as a result of the tariff act of March 3, 1883, and a class of wool of which the State of Ohio produces a percentage of from 25 to 30 per cent. of her entire clip is thereby depreciated in value. In other words, by reason of the reduction of duty on worsted yarns (*i. e.*, yarn made from wool which can be combed) in the tariff act of March 3, 1883, the value of 25 to 30 per cent. of the clip of Ohio, which has heretofore always commanded a price 3 to 5 cents per pound above ordinary Ohio wool, is now worth no more than ordinary fleece. This is independent of the direct effect of the reduction in the duty on wool apparent on the face of the law.

"To a somewhat less extent all of the wool-growers east of the Mississippi will suffer."

A few days later the same parties made a supplementary statement showing more in detail the effect of the tariff upon the worsted interest. It is to be noted that merino wools of certain grade, as well as strictly combing wools, are used for worsted through improvements in machinery. The statements follow here (pages 554, 555):

105 AND 107 READE STREET, NEW YORK, *March* 24, 1884.

DEAR SIR: In further explanation of our letter of March 17, we would say that under the tariff of 1867 a fine worsted yarn would cost, including charges and duty on the charges, say, $1.60 per pound. Under the tariff of March, 1883, the same yarn, costing the same price (first cost), can be bought here by the importer at $1.33 per pound. Reduction by duty of March, 1883, 27 cents per pound.

It is estimated that it takes 3 pounds of wool to make 1 pound of worsted yarn, therefore the loss is equivalent to 9 cents per pound on the raw material, which is about the extent of the decline in price of delaine wool from 48 cents in March, 1883, to 39 or 40 cents in March, 1884.

Meanwhile the manufacture of fine worsted yarn is seriously crippled. That some unusual stimulus has been given to shipments of worsted yarns to America is shown by the statistics reported, we believe, by the United States consular agent at Bradford.

Worsted yarn exported to United States January, 1883	£1,267
Worsted yarn exported to United States January, 1884	10,162
Worsted coatings exported to United States January, 1883	18,986
Worsted coatings exported to United States January, 1884	42,987

From this it will be seen that in addition to the increase in the exports of worsted yarns there has been a very large increase of manufactured yarn in the shape of worsted goods.

Yours, truly,

MAUGER & AVERY.

P. S.—In paragraph relating to tariff on worsted yarn we would explain that under tariff of 1867, if yarn cost 79 cents and charges were 2 cents, the duty would be on the basis of 81 cents cost; whereas, under the tariff of March, 1883, a yarn costing 79 cents will pay duty on 79 cents cost, no matter how much the legitimate charges may be.

SUPPLEMENTAL STATEMENTS MADE BY MESSRS. MAUGER & AVERY, UNDER DATE OF APRIL 2.

1. The worsted industry is quite a new one in this country, and has been until

the past few months the most successful branch of the woolen industry in the country, and the domestic growth of combing and delaine wools has been in proportion to the demand in this country.

2. The imports of combing wool (*i. e.*, those entered under class 2) are chiefly from England, but these wools compete with our medium and coarse combing of domestic growth rather than with the "delaine merino" wool produced in this country. The competition with our delaine wool comes from the fine Australian, of which a very large percentage of the importation is used for worsted purposes.

3. Our impression is that Arizona produces more fine than carpet stock, but we may be mistaken. Besides being lower in price than clothing or combing wools, the carpet wool fleeces are much lighter than finer grades, and the return per head of sheep is thus much less.

The same parties furnish a statement that so clearly explains the relations of the clothing and the combing wools in manufacturing that it is here repeated. (Pages 561, 562.)

Originally, only a growth of 5 to 6 inches could be combed, but with the improvements in combing machinery a staple 2½ inches long can now be combed with facility. There is very little wool grown now east of the Mississippi that does not have that length; but as a large percentage of the wool, owing to condition or feed of sheep, is weak or diseased, only the perfectly healthy wool is suitable for combing purposes. If anything interferes with the health of the sheep at that period of the growth of the fiber it will be affected, and when tension is applied it will break or part at that very point in the wool. Sometimes it happens that there will still be length enough to comb, and then it becomes a question of price. You will thus see that what constitutes combing wool is a somewhat arbitrary matter to be decided by the buyers, who are more particular when wools are plenty than when they are scarce. What they reject at one time they will accept at another, though when they are free buyers they lose by the great proportion of short and diseased wool combed out, called noils, which they have to sell at a low price.

All grades of wool, from the coarsest to the finest, are combed. At the "Centennial" a fine yarn was exhibited by one of our fine yarn spinners which they claimed was two-ply 200, or equivalent to 63.8 miles per pound.

On other machines the low carpet wools are combed for carpet purposes.

Worsted yarn is made entirely of wool that has been combed. Strictly speaking, worsted goods are made entirely of worsted or combed yarns, but to cheapen the goods cotton yarn is frequently used for warp, and carded (woolen) and silk yarns are also frequently used for the same purpose.

You are correct in your conclusion that the combing of the wool previous to spinning constitutes the basis of the distinction between "worsted" and "woolen goods," but the processes are somewhat different all through. "Woolen goods" are generally "fulled;" *i. e.*, shrunk up in finishing, while worsted goods are generally finished without fulling. The peculiarity of most worsted goods is the silky or glossy finish which they have. The bulk of our fine wools go into ladies' dress goods, but knit goods, cassimere shawls, overcoatings, braids, bunting, in fact a large variety of goods, are made now of worsted yarns.

By the process of manufacture which separates the short and weak staples the fibers that are left are uniform in length and strength, and laid side by side; the yarn can thus be drawn out further and is smooth and glossy. For any class of goods requiring to be light and strong worsted yarns are especially suited.

Yours, truly,

MAUGER & AVERY.

In the same report (page 563) the same gentlemen express the view that as the tendency of manufactures seems to be in the direction of worsted goods "an impetus will be given to the production of wools best suited for combing purposes, particularly if legislation does not interfere with its development.

In the same report (pages 564 to 566) Mr. T. C. Search, of the Fairmount Worsted Mills, Philadelphia, makes a statement in regard to the growth of the worsted industry in the United States, from which the following particulars are taken: The fine worsted trade of the United States in its condition is perhaps to-day the most unfortunate exponent of the unequal bearing of the late tariff reduction. The magnitude and growth of the industry are manifest in the census returns beginning with 1860.

In 1860 the valuation was placed at $1,320,027.

In 1870 the valuation was placed at $22,090,331.

In 1880 the valuation was placed at $33,549,942.

Since 1880 the rate of increase has enormously enlarged. The protection afforded by the tariff act of 1867 without doubt was the cause of the enormous growth here shown. By the change of schedule of duties on worsted yarn under act of March 3, 1883, the American manufacturer has been placed at a serious disadvantage compared with the foreign manufacturer who can obtain wools at a lower rate for worsted, using South American wool to a large extent.

If we can accept the judgment of the dealers and manufacturers whose views have been cited, it will be plain that the demand of consumers tends toward the worsted wools, while the manufacturer has been put to a disadvantage with reference to foreign makers by the changes introduced by the tariff of 1883. And the wool-growers of the States heretofore prominent in the product of wool suitable for such use have been subjected to a special disturbance of their industry and their incomes.

Such changes are likely to be most marked in the sheep husbandry on the better lands, as it is estimated that one acre of the most valuable land for all purposes will support four sheep. When the product of four sheep will no longer repay the owner for such use of his land, the sheep are slaughtered or transferred to cheaper land, in which transfer of location the individual sheep disappear oftentimes to be replaced by inferior sorts.

Mr. RANDALL introduced the following bill:

A bill to reduce and equalize duties on imports, to reduce internal-revenue taxes, and to modify the laws in relation to the collection of the revenue.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That on and after the 1st day of January, 1887, the following articles mentioned in this section, when imported, shall be exempt from duty:

Timber, all not further advanced or manufactured than hewn, sawed, squared, or sided.

Boards, clapboards, deals, palings, pickets, planks, and other lumber, in the rough or as sawed, not otherwise provided for.

Hubs for wheels, posts, last-blocks, wagon-blocks, oar-blocks, gun-blocks, heading-blocks, all like blocks or sticks, rough-hewn or sawed only.

Staves of wood of all kinds in the rough: *Provided*, That if any export duty is laid upon the above-mentioned articles, or either of them, by any country from whence imported, all said articles imported from said country shall be subject to duty as now provided by law.

Jute-butts.

Bristles.

SEC. 2. That on and after the 1st day of January, 1887, in lieu of the duties heretofore imposed on the articles hereinafter mentioned, there shall be levied, collected, and paid the following rates of duty on said articles severally:

Timber, when planed, framed, or otherwise further advanced or manufactured than sawed, hewn, squared, or sided only, 10 per cent. ad valorem.

Sawed boards, clapboards, deals, palings, pickets, plank, and other lumber, when planed or finished, for each side so planed or finished, 50 cents per 1,000 feet, board measure; when tongued and grooved, 50 cents per 1,000 feet, board measure, in addition to the rate imposed when planed or finished only.

Iron or steel railway bars, and railway bars made in part of steel, weighing more than 25 pounds to the yard, $13 per ton.

Iron or steel tee-rails, weighing not over 25 pounds to the yard, and iron or steel flat-rails, punched, $16 per ton. Iron or steel railway fish-plates or splice-bars, 1 cent per pound.

Horseshoe-nails, hob-nails, and wire nails, and all other wrought-iron or steel nails, not otherwise specially enumerated or provided for, 3 cents per pound.

Iron or steel beams, girders, joists, angles, channels, car-truck channels, TT columns and posts, or parts or sections of columns and posts, deck and bulb beams, and building forms, together with all other structural shapes of iron or steel, 1 cent per pound.

Steel wheels and steel-tired wheels for railway purposes, whether wholly or partly finished, and iron or steel locomotive, car, or other railway tires, or parts thereof, wholly or partly manufactured, 2 cents per pound; iron or steel ingots, cogged ingots, blooms, or blanks for the same, without regard to the degree of manufacture, 1½ cents per pound.

Boiler or other plate iron, sheared or unsheared, skelp iron, sheared or rolled in grooves, 1½ cents per pound. Sheet-iron, common or black, thinner than 1 inch and one-half and not thinner than No. 20 wire-gauge, 1 cent per pound; thinner than No. 20 wire-gauge and not thinner than No. 25 wire-gauge, 1 and two-tenths of 1 cent per pound; thinner than No. 25 wire-gauge, and all iron commercially known as common or black taggers iron, whether put up in boxes or bundles or not, 1½ cents per pound: *Provided*, That on all such iron and steel sheets or plates aforesaid, excepting on what are known commercially as tin plates, terne plates, and taggers tin, and hereafter provided for, when galvanized or coated with zinc or spelter, or other metals, or any alloy of these metals, three-fourths of 1 cent per pound additional.

Round iron, in coils or rods, less than seven-sixteenths of 1 inch in diameter, and bars and shapes of rolled iron, not specially enumerated or provided for, 1 cent per pound.

Iron or steel sheets, or plates, or taggers iron, coated with tin or lead, or with a mixture of which these metals is a component part, by dipping or any other process, and commercially known as tin plates, terne plates, and taggers tin, 2½ cents per pound.

Iron or steel rivet, screw, nail, and fence, wire-rods, round, in coils or loops, not lighter than No. 5 wire-gauge, six-tenths of 1 cent per pound; smaller than No. 5 wire-gauge, eight-tenths of 1 cent per pound. Iron or steel, flat, with longitudinal ribs, for the manufacture of fencing, six-tenths of 1 cent per pound.

Iron or steel cotton-ties, or hoops for baling purposes, not thinner than No. 20 wire-gauge, 1 cent per pound.

Lead ore and lead dross, 1 cent per pound; lead in pigs and bars, molten and old refuse lead run into blocks and bars, and old scrap lead, fit only to be remanufactured, 1½ cents per pound; lead in sheets, pipes, or shot, 2½ cents per pound.

Zinc, spelter, or tutenegue, in blocks or pigs, 1½ cents per pound; in sheets, 2 cents per pound; zinc, old and worn out, fit only to be remanufactured, three fourths of 1 cent per pound,

Iron or steel wire cloths and iron or steel wire nettings, made in meshes of any form, if composed of wire smaller than No. 16 and not smaller than No. 26 wire-gauge, 3½ cents per pound; if composed of wire smaller than No. 26 wire-gauge, 4 cents per pound.

Wire rope and wire strand, if composed of iron wire smaller than No. 10 and not smaller than No. 16 wire-gauge, 2½ cents per pound; if composed of iron wire smaller than No. 18 and not smaller than twenty-six wire-gauge, 3 cents per pound.

Soap, castile, 1½ cents per pound, glucose, or grape-sugar, three-fourths of 1 cent per pound; cod-liver oil, 20 cents per gallon; ocher and ochery earths and umber and umber earths, when dry, one-fourth of 1 cent per pound.

Pipes, pipe-bowls, and all smokers' articles whatsoever, not specially enumerated or provided for in this act, 70 per cent. ad valorem; all common tobacco-pipes of clay, 15 cents per gross.

Animals, live: Horses and mules, $10 per head; cattle, $4 per head; hogs, $1 per head; sheep, 50 cents per head; all other live animals, not otherwise specially enumerated or provided for, 20 per cent. ad valorem: *Provided*, That so much of section 6 of the act approved March 3, 1883, entitled "An act to reduce internal-revenue taxation, and for other purposes," as provides that "animals specially imported for breeding purposes shall be admitted free upon proof thereof satisfactory to the Secretary of the Treasury, and under such regulations as he may prescribe," be, and the same is hereby, repealed, to take effect January 1, 1887.

Starch: Potato or corn, 1½ cents per pound; rice and other, 2 cents per pound.

Rice, cleaned, 2½ cents per pound; uncleaned, 1½ cents per pound; paddy, 1½ cents per pound.

Rice-flour, rice-meal, and broken rice which will pass through a sieve known commercially as No. 10 brass-wire sieve, ten meshes to the running inch, or one hundred meshes to the square inch, the space between the wires not to exceed in length or width seven hundred and eighty-seven ten thousandths of an inch, 20 per cent. ad valorem.

Fruits: Oranges, lemons, or limes, in packages of capacity of 1½ cubic feet or less, 13 cents per package; in packages of capacity exceeding 1½ cubic feet and not exceeding 2½ cubic feet, 25 cents per package; in packages of capacity exceeding 2½ cubic feet and not exceeding 5 cubic feet, 50 cents per package; in packages of capacity exceeding 5 cubic feet and not exceeding 7½ cubic feet, 75 cents per package; in packages of capacity exceeding 7½ cubic feet, 10 cents for every additional cubic foot or fractional part thereof; in bulk, $1.75 per thousand.

Grapes, 1 cent per pound.

Fruits preserved in their own juices, 20 per cent. ad valorem.

Fruit-juice, or cherry-juice, 50 cents per gallon.

Citron, preserved or candied, 4 cents per pound; orange-peel and lemon-peel, preserved or candied, 2 cents per pound.

Cement, Portland or Roman, in barrels, sacks, or other packages, 8 cents per 100 pounds; in bulk, 6 cents per 100 pounds.

Whiting and Paris white, dry, one-fourth of one cent per pound; ground in oil or putty, 1 cent per pound.

Glycerine, refined, 4 cents per pound.

Fish-glue or isinglass, 15 cents per pound.

Castor-beans or seeds, 40 cents per bushel of 50 pounds.

Castor-oil, 60 cents per gallon.

Acetate of lead, brown, 3 cents per pound; white, 4 cents per pound.

Litharge, 3 cents per pound.

Orange mineral and red lead, 2½ cents per pound.

Nitrate of lead, 2½ cents per pound.

On stockings, hose, half-hose, shirts, drawers, and other goods made on knitting machines or frames, composed wholly of cotton, and not herein otherwise provided for, 35 per cent. ad valorem.

On stockings, hose, half-hose, shirts, drawers, and other goods fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, and composed wholly of cotton, 40 per cent. ad valorem.

On clothing ready-made, and wearing apparel of every description (including corsets), except knit goods, composed of cotton or other vegetable textile, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, and not otherwise specially enumerated or provided for, 40 per cent. ad valorem.

Cotton cords, braids, gimps, galloons, webbing, goring, suspenders, braces, and all manufactures of cotton not otherwise specially enumerated or provided for, 35 per cent. ad valorem.

On goods heretofore known commercially as Hamburg edgings, embroideries, or insertings, and as Egyptian and oriental laces, composed of cotton, and stitched or otherwise wrought by machines worked by hand or other power, 45 cents per pound and 15 per cent. ad valorem.

On laces, embroideries, insertings, trimmings, lace window-curtains, and tamboured articles, composed of cotton or other vegetable fiber, not herein otherwise enumerated or provided for, and on cotton damask, hemmed handkerchiefs, and cotton velvet, 40 per cent. ad valorem.

Oil-cloth foundations, or floor-cloth canvas, or burlaps exceeding 60 inches in width, made of flax, jute, or hemp, or of which flax, jute, or hemp, or either of them, shall be the component material of chief value, 35 per cent. ad valorem.

Gunny-cloth, not bagging, valued at 10 cents or less per square yard, 2 cents per pound; valued at over 10 cents per square yard, 3 cents per pound.

Bags and bagging, and like manufactures, not herein specially enumerated or otherwise provided for (except bagging for cotton), composed wholly or in part of flax, hemp, jute, gunny-cloth, gunny-bags, or other vegetable material, 35 per cent. ad valorem.

Bagging for cotton, or other manufactures not specially enumerated or otherwise provided for, suitable for the uses for which cotton bagging is applied, composed in whole or in part of hemp, jute, jute butts, flax, gunny-bags, gunny-cloth, or other vegetable material, and valued at 7 cents or less per square yard, 1½ cents per pound; valued at over 7 cents per square yard, 1¾ cents per pound.

Jute, 10 per cent. ad valorem.

Silk, partially manufactured from cocoons, or from waste silk, and not further advanced or manufactured than carded or combed silk, 50 cents per pound.

Thrown silk, not more advanced than singles, tram, organzine, sewing-silk, twist, floss, spun silk, and silk threads or yarns of every description, 30 per cent. ad valorem.

Lastings, mohair cloth, silk twist, or other manufactures of cloth, woven or made in patterns of such size, shape, or form, or cut in such manner as to be fit for buttons exclusively, 10 per cent. ad valorem.

Goods in the piece, including ribbons (except knit goods, velvets, plushes, or other pile fabrics), weighing not less than 1 ounce nor more than 8 ounces per square yard, containing less than 25 per cent. and not less than 10 per cent. in weight of silk, 75 cents per pound and 15 per cent. ad valorem; the same, containing less than 50 per cent. and not less than 25 per cent. in weight of silk, $1.25 per pound and 15 per cent. ad valorem; the same, containing 50 per cent. or more in weight of silk, if black, $1.60 per pound and 15 per cent. ad valorem; if white or colored, or partly black or partly colored, $2.25 per pound and 15 per cent. ad valorem.

Velvets, plushes, or other pile fabrics in the piece (including ribbons), weighing not less than 1 ounce nor more than 8 ounces per square yard, containing less than 25 per cent. and not less than 10 per cent. in weight of silk, $1 per pound and 15 per cent. ad valorem; the same, containing less than 50 per cent. and not less than 25 per cent. in weight of silk, $1.50 per pound and 15 per cent. ad valorem; the same, containing 50 per cent. or more in weight of silk, $3.50 per pound and 15 per cent. ad valorem.

Wearing apparel of every description, composed of silk or of which silk is the component material of chief value, made up wholly or in part by the tailor, seamstress, or manufacturer (except knit goods), 55 per cent. ad valorem.

Umbrellas, parasols, and shades, covered with silk or with any material of which silk is the component of chief value, 25 cents each and 50 per cent. ad valorem.

All manufactures of silk, or of which silk is the component material of chief value, not provided for in this act, 50 per cent. ad valorem.

In ascertaining the percentage of silk under this act the weight of silk shall be taken as found in the goods.

Gloves wholly or partially manufactured from dressed kid or goat skin, and known commercially as "glace" finish, not over 13 inches in length, $3 per dozen pairs; over 13 and not over 17 inches in length, $4 per dozen pairs; over 17 inches in length, $5 per dozen pairs.

Gloves wholly or partially manufactured from dressed leather other than kid or goat skin, and known commercially as "glace" finish, not over 13 inches in length, $2 per dozen pairs; over 13 and not over 17 inches in length, $3 per dozen pairs; over 17 inches in length, $4 per dozen pairs.

Gloves wholly or partially manufactured from undressed leather, known commercially as "velvet," "castor," "chamois," or "Suede" finish, not over 13 inches in length, $2 per dozen pairs; over 13 and not over 17 inches in length, $3 per dozen pairs; over 17 inches in length, $4 per dozen pairs.

On all leather gloves, if lined or trimmed with fur, $1 per dozen pairs additional; if "pique" or prick-seam sewn, 50 cents per dozen pairs additional; if embroidered, 50 cents per dozen pairs additional.

The length of all gloves shall be determined by measuring from the tip end of the longest finger to the opposite extremity of the glove. All gloves entered by a false description or classification, or a false statement as to quantity, shall be subject to an additional duty of $5 per dozen pairs.

All wools, hair of the alpaca, goat, and other like animals, shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

Class 1: Clothing wools; that is to say, merino, mestiza, mets, or metis wools, or other wools of merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes 2 and 3.

Class 2: Combing wools; that is to say, Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also all hair of the alpaca, goat, and other like animals.

Class 3: Carpet wools and other similar wools, such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

The duty on wools of the first class which shall be imported washed shall be twice the amount of the duty to which they would be subjected if imported unwashed; and the duty on wools of all classes which shall be imported scoured shall be three times the duty to which they would be subjected if imported unwashed. All wools which, when imported, have been cleansed by the use of soap or an alkali, or other chemical agent or detergent, or by any process other than the application of water in its natural state, or which shall contain less than 10 per cent. of the weight thereof of dirt, grease, yolk, or other foreign substance or matter, shall be classified as scoured wool, and pay duty accordingly. The duty upon wool of the sheep, or hair of the alpaca, goat, and other like animals, which shall be imported in any other than ordinary condition, as now and heretofore practiced, or which shall be changed in its character for the purpose of evading the duty, shall be twice the duty to which it would be otherwise subject.

On wools of the first and second classes, valued at 30 cents per pound or less, 10 cents per pound; valued at above 30 cents per pound, 12 cents per pound; on wools of the third class, 3 cents per pound.

On carded or combed wool or tops, 48 cents per pound and 10 per cent. ad valorem; wools on the skin, the same rates as other wools, the quantity to be ascertained under such rules as the Secretary of the Treasury may prescribe.

Woolen rags, shoddy, mungo waste, and flocks, 10 cents per pound.

Woolen or worsted cloths and shawls and all manufactures of every description made wholly or in part of wool, not specially enumerated or otherwise provided for, valued at not exceeding 60 cents per pound, 30 cents per pound and 35 per cent. ad valorem; valued at above 60 cents per pound and not exceeding 80 cents per pound, 35 cents per pound and 35 per cent. ad valorem; valued at above 80 cents per pound, 35 cents per pound and 40 per cent. ad valorem.

Flannels, blankets, hats, balmorals, yarns, knit goods (including goods made on knitting-frames), composed wholly or in part of wool, and all manufactures composed wholly or in part of the hair of the alpaca, goat, or other animals, not specially enumerated or otherwise provided for, valued at not exceeding 30 cents per pound, 10 cents per pound; valued at above 30 cents per pound and not exceeding 40 cents per pound, 12 cents per pound; valued at above 40 cents per pound and not exceeding 60 cents per pound, 18 cents per pound; valued at above 60 cents per pound and not exceeding 80 cents per pound, 24 cents per pound; and in addition thereto, upon all the above-named articles, 35 per cent. ad valorem; valued at above 80 cents per pound, 35 cents per pound, and in addition thereto 40 per cent. ad valorem.

Women's and children's dress-goods, coat-linings, Italian cloths, and goods of like description, composed in part of wool, worsted, the hair of the alpaca, goat, or other animals, valued at not exceeding 20 cents per square yard, 5 cents per square yard, and in addition thereto 35 per cent. ad valorem; valued at above 20 cents per square yard, 7 cents per square yard and 40 per cent. ad valorem; if composed wholly of wool, worsted, the hair of the alpaca, goat, or other animals, or of a mixture of them, 9 cents per square yard and 40 per cent. ad valorem; but all such goods with selvedges made wholly or in part of other materials, or with threads of other materials introduced for the purpose of changing the classification, shall be dutiable at 9 cents per square yard and 40 per cent. ad valorem: *Provided*, That all goods of the character enumerated in this paragraph weighing over 4 ounces per square yard shall pay a duty of 35 cents per pound and 40 per cent. ad valorem.

Clothing, ready-made, and articles of wearing apparel of every description, except knit goods, not specially enumerated or provided for, composed wholly or in part of wool, worsted, the hair of the alpaca, goat, or other animals, made up or manufactured wholly or in part by the tailor, seamstress, or manufacturer, 45 cents per pound and 45 per cent. ad valorem: *Provided*, That this paragraph shall be a substitute for the paragraphs in Schedule K of the act entitled "An act to reduce internal-revenue taxation, and for other purposes," approved March 3, 1883, relating respectively to "clothing, ready-made," &c., and to "cloaks, dolmans," &c.

Marble of all kinds, in block, rough or squared, 50 cents per cubic foot; veined marble, sawed, dressed, or otherwise, including marble slabs and marble paving-tiles, $1 per cubic foot.

Salt, in bags, sacks, barrels, or other packages, 10 cents per 100 pounds; in bulk, 4 cents per 100 pounds.

SEC. 3. That the following amendments to, substitutes for, and modifications of existing laws shall take effect on and after the 1st day of October, 1886: Section 6 of the act approved March 3, 1883, entitled "An act to reduce internal-revenue taxation, and for other purposes," providing a substitute for title 33 of the Revised Statutes of the United States, is hereby amended as to certain of the sections and parts of sections or schedules comprised therein as follows, respectively:

By striking out section 2499 and substituting in lieu thereof the following:

"SEC. 2499. Each and every imported article, not enumerated or provided for in any schedule in this title, which is similar, either in the material, quality, texture, or the use to which it may be applied, to any article enumerated in this title as chargeable with duty, shall pay the same rate of duty which is levied on the enumerated article which it most resembles in any of the particulars before mentioned; and if any non-enumerated article equally resembles two or more enumerated articles on which different rates of duty are chargeable, there shall be levied on such non-enumerated article the same rate of duty as is chargeable on the article which it resembles paying the highest rate of duty; and on articles, not enumerated or provided for, manufactured of two or more materials the duty shall be assessed at the highest rate at which the same would be chargeable if composed wholly of the component material thereof of chief value; and the words "component material of chief value," wherever used in this title, shall be held to mean that component material which shall exceed in value any other single component material found in the article; and the value of each component material shall be determined by the ascertained value of such material in its last form and condition before it became a component material of such article. If two or more rates of duty shall be applicable to any imported article, it shall pay duty at the highest of such rates: *Provided*, That any non-enumerated article similar in material and quality and texture, and the use to which it may be applied, to any article on the free-list, and in the manufacture of which no dutiable materials are used, shall be free of duty."

SEC. 2502. SCHEDULE A—CHEMICAL PRODUCTS.—By striking out from this schedule the words "distilled spirits containing 50 per cent. of anhydrous alcohol, $1 per gallon;" also by striking out the words "alcohol containing 94 per cent. anhydrous alcohol, $2 per gallon."—*Tariff*, paragraphs 101, 102, 103.

SCHEDULE B—EARTHENWARE AND GLASSWARE.—By striking out the tenth clause of this schedule, relating to "green and colored glass bottles," &c., and inserting the following in lieu thereof:

"Green and colored glass bottles, vials, demijohns, and carboys (covered or uncovered), pickle or preserve jars, and other plain, molded, or pressed green or colored bottle-glass, not cut, engraved, or painted, and not specially enumerated or provided for in this act, 1 cent per pound; if filled, and not otherwise in this act provided for, and the contents are subject to an ad valorem duty, or to a rate of duty based on their value, the value of such bottles, vials, or other vessels shall be added to the value of the contents for the ascertainment of the dutiable value of the latter; but if filled, and not otherwise provided for, and the contents are not subject to any ad valorem duty or to a rate of duty based on their value, they shall pay a duty of 1 cent per pound in addition to the duty, if any, on their contents."—*Tariff*, paragraph 133.

By striking out the eleventh clause of this schedule, relating to "flint and lime glass bottles," &c., and inserting the following in lieu thereof:—[Tariff, paragraph 134.]

"Flint and lime glass bottles and vials, and other plain, molded, or pressed flint or lime glassware, not specially enumerated or provided for in this act, 40 per cent. ad valorem; if filled, and not otherwise in this act provided for, and the contents are subject to an ad valorem duty, or to a rate of duty based on their value, the value of such flint or lime glass bottles or vials, or other vessels of like material above provided for, shall be added to the value of the contents for the ascertainment of the dutiable value of the latter; but if filled, and not otherwise provided for, and the contents are not subject to an ad valorem duty, or to a rate of duty based on their value, they shall pay a duty of 40 per cent. ad valorem in addition to the duty, if any, on their contents."

Schedule C—Metals.—By striking out the last clause of this schedule, relating

to "manufactures, articles, or wares not specially enumerated or provided for," and inserting in lieu thereof the following:

"Manufactures, articles, or wares not specially enumerated or provided for in this act, composed wholly or in part of iron, steel, copper, lead, nickel, pewter, tin, zinc, gold, silver, platinum, or any other metal, and whether partly or wholly manufactured, 45 per cent. ad valorem: *Provided*, That nothing in this clause shall affect the rate of duty hereinbefore provided for the manufactures of copper, or of which copper shall be the component of chief value."—[Tariff, paragraphs 186, 216.]

By striking out in next to the last clause of this schedule the words "mineral substances in a crude state;" so that the clause shall read as follows:

"Metals, unwrought, not specially enumerated or provided for in this act, 20 per cent. ad valorem."—[Tariff, paragraph 215.]

Schedule F—Tobacco.—By striking out from this schedule the second clause, relating to "leaf-tobacco," and in lieu thereof inserting the following:

"Leaf-tobacco, of the requisite size and of the necessary fineness of texture to be suitable for wrappers, and of which more than one hundred leaves are required to weigh a pound, if not stemmed, 75 cents per pound; if stemmed, $1 per pound."—[Tariff, paragraph 246.]

By striking out the clause in this schedule relating to "vegetables in their natural state or in salt or brine," and inserting in lieu thereof the following:

"Vegetables, such as beets, peas, beans, and the like, in their natural state, whether green or dried or in salt or brine, not specially enumerated or provided for in this act, and garden seeds, not edible, except seed of the sugar-beet, 10 per cent. ad valorem."—[Tariff, paragraphs 286, 465, 760.]

Schedule N.—By striking out the seventh clause of this schedule, relating to "bonnets, hats, and hoods," &c., and inserting in lieu thereof the following:

"Bonnets, hats, and hoods for men, women, and children, composed of hair, whalebone, or any vegetable material, and not specially enumerated or provided for in this act, 30 per cent. ad valorem."—[Tariff, paragraph 400.]

By striking out the clause of this schedule commencing with the words "hats, &c., materials for," and inserting in lieu thereof the following:

"Hats, materials for: Braids, plaits, flats, willow sheets and squares, fit for use in making or ornamenting hats, bonnets, and hoods, composed of straw, chip, grass, palm-leaf, willow, hair, whalebone, or any vegetable material, not specially enumerated or provided for in this act, 20 per cent. ad valorem."—[Tariff, paragraph 448.]

By striking out the clause of this schedule commencing with the words "garden seeds," which clause is hereby repealed.—[Tariff, paragraph 465.]

By striking out the last clause but one of this schedule, relating to "watches," &c., and inserting in lieu thereof the following: [Tariff, paragraph 494.]

"Watches, watch-cases, watch-movements, parts of watches, watch-glasses, and watch-keys, whether separately packed or otherwise, and watch materials not specially enumerated or provided for in this act, 25 per cent. ad valorem."

By striking out the last clause in this schedule, relating to "webbing," and inserting in lieu thereof the following:

"Webbing composed of cotton or flax, or of a mixture of these materials, and not specially enumerated or provided for in this act, 35 per cent. ad valorem."—[Tariff, paragraph 495.]

THE FREE-LIST.

SEC. 2503 [Substituted for section 2505, R. S.]. By striking out the clause in this section commencing with the words "articles the growth, produce, and manufacture of the United States," and inserting in lieu thereof the following:

"Articles the growth, produce, and manufacture of the United States, when returned after having been exported, without having been advanced in value or improved in condition by any process of manufacture or other means; casks, barrels, carboys, bags, and other vessels of American manufacture exported filled with American products, or exported empty and returned filled with foreign products, including shooks when returned as barrels or boxes; but proof of the identity of such articles shall be made, under general regulations to be prescribed by the Secretary of the Treasury; and if any of such articles are subject to internal tax at the time of exportation, such tax shall be proved to have been paid before exportation, and not refunded: *Provided*, That this clause shall not include any article upon which an allowance of drawback has been made, the reimportation of which is hereby prohibited except upon payment of duties equal to the drawbacks allowed."—[Tariff, paragraphs 649a to 649d.]

Add to the clause in this section relating to "soap-stocks" so that the clause as amended will read as follows:

"Soap-stocks, fit only for use as such."—[Tariff, paragraph 790.]

By striking out the clause relating to "wearing-apparel," &c. (tariff, paragraph 815), and inserting in lieu thereof the following:

"Wearing-apparel, implements, instruments, and tools of trade, occupation, or employment, professional books, and other personal effects (not merchandise) of persons arriving in the United States, not exceeding in value $500, and not intended for the use of any other person or persons, nor for sale; but this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment or for sale: *Provided, however*, That the limitation in value above specified shall not apply to wearing-apparel and other personal effects which may have been taken from the United States to foreign countries by the persons returning therefrom; and such last-named articles shall, upon production of evidence satisfactory to the collector and to the naval officer (if any) that they have been previously exported from the United States by such persons, and have not been advanced in value or improved in condition by any process of manufacture or labor thereon since so exported, be exempt from payment of duty: *And provided, further*, That all such articles of foreign production or manufacture which may have been once imported into the United States and subjected to the payment of duty shall, upon reimportation, if not improved in condition, by any means, since their exportation from the United States, be entitled to exemption from duty upon their identity being established, under such rules and regulations as may be prescribed by the Secretary of the Treasury.

"Works of art, drawings, engravings, photographic pictures, and philosophical and scientific apparatus brought by professional artists, lecturers, or scientists arriving from abroad, for use by them temporarily for exhibition and in illustration, promotion, and encouragement of art, science, or industry in the United States; and wearing-apparel and other personal effects of tourists from abroad visiting the United States, shall be admitted to free entry, under such regulations as the Secretary of the Treasury may prescribe; and bonds shall be given, whenever required by the Secretary of the Treasury, for the payment to the United States of such duties as may be imposed by law upon any and all such articles as shall not be exported within six months after such importation: *Provided, however*, That the Secretary of the Treasury may, in his discretion, extend such period for a further term of six months in cases where application therefor shall be made.

"Wearing-apparel, old and worn, not exceeding $100 in value, upon production of evidence satisfactory to the collector and naval officer (if any) that the same has been donated and imported in good faith for the relief or aid of indigent or needy persons residing in the United States, and not for sale."

SEC. 4. That section 7 of the act approved March 3, 1883, entitled "An act to reduce internal-revenue taxation, and for other purposes," is hereby amended so that it shall be as follows:

"In all cases where imported merchandise is subject to an ad valorem rate of duty, or to a duty based upon or regulated in any manner by the value thereof, the duty shall be assessed upon the actual market value or wholesale price of such merchandise, at the time of exportation to the United States, in the principal markets of the country from whence imported, and in the finished condition in which such merchandise is there bought and sold for exportation to the United States, and in which it is prepared and put up for shipment when so bought and sold, or when consigned to the United States for sale, including all costs, charges, and expenses incident to placing the same in such condition: *Provided, however*, That in determining the dutiable value of imported merchandise no estimate shall be made of the cost or the value of such outside sacks, crates, cases, or other outer coverings as are used, and as are designed to be used, only in the *bona fide* transportation of such merchandise to the United States, nor of the actual and necessary expenses incident to the transportation of the merchandise from the place of purchase or consignment to the vessel or other vehicle in which exported to the United States, nor of commissions, marine insurance, export duties, or fees for authentication by consular officers of the United States, in case the same shall be severally stated in the invoice, and if not so stated no deduction therefor from the invoice value shall be allowed: *And provided further*, That if there be used for covering or holding imported merchandise which shall be free of duty, any material or article designed for use other than in the *bona fide* transportation of such merchandise to the United States, duty shall be assessed thereon at the rate to which such material or article would be subject if imported separately; and if there be used for covering or holding imported merchandise which shall be subject to duty, any material or article designed for use other than in the *bona fide* transportation of such merchandise to the United States, and which, if imported separately, would be subject to a higher rate of duty than the merchandise contained therein, the whole invoice shall be subject to such higher rate of duty, unless the value of the merchandise, and of the article or material covering or holding the same, shall be separately stated in the invoice, in which case the duties shall be assessed and collected on each separately, at the rates prescribed by law: *And provided further*, That, except as provided in this section and in section 17 of this act, duties shall not be assessed upon an amount less than the invoice or entered value of the merchandise."

SEC. 5. That section 8 of the act of March 3, 1883, entitled "An act to reduce internal-revenue taxation, and for other purposes," amending section 2841 of the Revised Statutes of the United States, is hereby further amended so that said section of the Revised Statutes shall be as follows:

"SEC. 2841. Whenever merchandise imported into the United States is entered by invoice, one of the following declarations, according to the nature of the case, shall be filed with the collector of the port, at the time of entry, by the owner, importer, consignee, or agent; which declaration so filed shall be duly signed by the owner, importer, consignee, or agent, before the collector, or before a notary public or other officer duly authorized by law to administer oaths and take acknowledgments, who may be designated by the Secretary of the Treasury to receive such declarations and to certify to the identity of the persons making them; and every officer so designated shall file with the collector of the port a copy of his official signature and seal: *Provided*, That if any of the invoices or bills of lading of any merchandise imported in any one vessel, which should otherwise be embraced in said entry, have not been received at the date of the entry, the declaration may state the fact, and thereupon such merchandise of which the invoices or bills of lading are not produced shall not be included in such entry, but may be entered subsequently.

"DECLARATION OF CONSIGNEE, IMPORTER, OR AGENT.

"I, ——— ———, do solemnly and truly declare that the invoice and bill of lading now presented by me to the collector of ——— are the true and only invoice and bill of lading by me received of all the goods, wares, and merchandise imported in the ———, whereof ——— ——— is master, from ———, for account of any person whomsoever for whom I am authorized to enter the same; that the said invoice and bill of lading are in the state in which they were actually received by me, and that I do not know nor believe in the existence of any other invoice or bill of lading of the said goods, wares, and merchandise; that the entry now delivered to the collector contains a just and true account of the said goods, wares, and merchandise, according to the said invoice and bill of lading; that nothing has been, on my part, nor to my knowledge on the part of any other person, concealed or suppressed, whereby the United States may be defrauded of any part of the duty lawfully due on the said goods, wares, and merchandise; that the said invoice and the declaration therein are in all respects true, and were made by the person by whom the same purports to have been made; and that if at any time hereafter I discover any error in the said invoice, or in the account now rendered of the said goods, wares, and merchandise, or receive any other invoice of the same, I will immediately make the same known to the collector of this district. And I do further solemnly and truly declare that to the best of my knowledge and belief [insert the name and residence of the owner or owners] is [or are] the owner [or owners] of the goods, wares, and merchandise mentioned in the annexed entry; that the invoice now produced by me exhibits the actual cost [if purchased] or fair market value [if otherwise obtained], at the time or times and place or places when or where procured [as the case may be], of the said goods, wares, and merchandise, including all cost for finishing said goods, wares, and merchandise to their present condition, and no other or different discount, bounty, or drawback but such as has been actually allowed on the same.

"DECLARATION OF OWNER IN CASES WHERE MERCHANDISE HAS BEEN ACTUALLY PURCHASED.

"I, ——— ———, do solemnly and truly declare that the entry now delivered by me to the collector of ——— contains a just and true account of all the goods, wares, and merchandise imported by or consigned to me, in the ———, whereof ——— ——— is master, from ———; that the invoice which I now produce contains a just and faithful account of the actual cost of the said goods, wares, and merchandise, including all cost of finishing said goods, wares, and merchandise to their present condition, and no other discount, drawback, or bounty but such as has been actually allowed on the same; that I do not know nor believe in the existence of any invoice or bill of lading other than those now produced by me, and that they are in the state in which I actually received them. And I further solemnly and truly declare that I have not in the said entry or invoice concealed or suppressed anything whereby the United States may be defrauded of any part of the duty lawfully due on the said goods, wares, and merchandise; that the said invoice and declaration thereon are in all respects true, and were made by the person by whom the same purports to have been made; and that if at any time hereafter I discover any error in the said invoice or in the account now produced of the said goods, wares, and merchandise, or receive any other invoice of the same, I will immediately make the same known to the collector of this district.

"DECLARATION OF MANUFACTURER OR OWNER IN CASES WHERE MERCHANDISE HAS NOT BEEN ACTUALLY PURCHASED.

"I, ——— ———, do solemnly and truly declare that the entry now delivered by me to the collector of ——— contains a just and true account of all the goods, wares, and merchandise imported by or consigned to me in the ———, whereof ——— ———, is master, from ———; that the said goods, wares, and merchandise were not actually bought by me, or by my agent, in the ordinary mode of bargain and sale, but that nevertheless the invoice which I now produce contains a just and faithful valuation of the same, at their fair market value, at the time or times and place or places when and where procured for my account [or for account of myself or partners]; that the said invoice contains also a just and faithful account of all the cost for finishing said goods, wares, and merchandise

to their present condition, and no other discount, drawback, or bounty but such as has been actually allowed on the said goods, wares, and merchandise; and the said invoice and the declaration thereon are in all respects true, and were made by the person by whom the same purports to have been made; that I do not know nor believe in the existence of any invoice or bill of lading other than those now produced by me, and that they are in the state in which I actually received them. And I do further solemnly and truly declare that I have not in the said entry or invoice concealed or suppressed anything whereby the United States may be defrauded of any part of the duty lawfully due on the said goods, wares, and merchandise; and that if at any time hereafter I discover any error in the said invoice, or in the account now produced of the said goods, wares, and merchandise, or receive any other invoice of the same, I will immediately make the same known to the collector of this district."

SEC. 6. That any person who shall knowingly make any false or untrue statement in the declarations provided for in the preceding section, or shall aid or procure the making of any such false statement as to any matter material thereto, shall, on conviction thereof, be punished by a fine of not less than $2,000, and by imprisonment at hard labor not more than five years: *Provided*, That nothing in this section shall be construed to relieve imported merchandise from forfeiture for any cause elsewhere provided by law.

SEC. 7. That the Secretary of the Treasury shall grant permission to any firm, individual, or corporation to withdraw from bond, alcohol, or any spirits containing alcohol, subject to internal-revenue tax, in specified quantities of not less than 300 proof-gallons, without the payment of the internal-revenue tax on the same, or on the spirits from which it may have been distilled, for the sole purpose of use in such industrial pursuits as shall be specified in the permit issued by the Secretary of the Treasury, under such regulations and requirements as to stamps, bonds, and other security and safeguards, by methylation or otherwise, as shall be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury: *Provided*, That any person who shall sell, use, or willfully permit the use of spirits withdrawn under this act for any other purpose than that specified herein shall, for each offense, be fined not less than five hundred nor more than five thousand dollars, and be imprisoned for not less than six months nor more than two years: *And provided further*, That any violation of the rules and regulations made by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, in conformity with this act, shall be punished by a fine of not less than fifty nor more than one hundred dollars for each offense.

SEC. 8. That sections 2803 and 3068 of the Revised Statutes be amended to read as follows:

"SEC. 2803. Any baggage or personal effects arriving in the United States in transit to any foreign country may be delivered by the parties having it in charge to the collector of the proper district, to be by him retained, without the payment or exaction of any import duty, or to be forwarded by such collector to the collector of the port of departure, and to be delivered to such parties on their departure for their foreign destination, under such rules, regulations, and fees as the Secretary of the Treasury may prescribe."

"SEC. 3068. All merchandise imported into the United States shall, for the purpose of this title, be deemed and held to be the property of the person to whom the merchandise may be consigned; but the holder of any bill of lading consigned to order and properly indorsed shall be deemed the consignee thereof; and in case of the abandonment of any merchandise to the underwriters the latter may be recognized as the consignee."

SEC. 9. That authority is hereby given to the Secretary of the Treasury, in his discretion, to dispense whenever expedient with the triplicate invoices and consular certificates now required by sections 2853, 2854, and 2855 of the Revised Statutes of the United States; and triplicate invoices and consular certificates shall in no case be required when the value of the merchandise shipped by any one consignor, in any one vessel, at one and the same time, does not exceed $100; and the Secretary of the Treasury, with the concurrence of the Secretary of State, is hereby authorized to make such general regulations in regard to invoices and consular certificates as in his judgment the public interest may require.

SEC. 10. That all fees exacted and oaths administered by officers of the customs, under or by virtue of existing laws of the United States, upon the entry of imported goods and the passing thereof through the customs, and also upon all entries of domestic goods, wares, and merchandise for exportation, be, and the same are hereby, abolished; and in case of entry of merchandise for exportation, a declaration, in lieu of an oath, shall be filed, in such form and under such regulations as may be prescribed by the Secretary of the Treasury; and the penalties for false statements in such declaration provided in the fourth section of this act shall be applicable to declarations made under this section: *Provided*, That where such fees, under existing laws, constitute, in whole or in part, the compensation of any officer, such officer shall receive, from and after the passage of this act, a fixed sum for each year equal to the amount of such compensation received by him for the fiscal year ended June 30, 1885, or a proportionate amount for any part of a year.

SEC. 11. That on all articles exported on and after the passage of this act, and entitled to drawback under sections 3019, 3020, and 3021 of the Revised Statutes of the United States, and under section 10 of the act of February 8, 1875, entitled "An act to amend existing customs and internal-revenue laws, and for other purposes," there shall be allowed a drawback equal to the duty paid on the materials named and described in said laws, without retention of any part thereof: *Provided, however*, That where the amount of drawback is less than $100, the fees of the United States consuls for certifying the foreign-landing certificate shall not exceed 50 cents: *And provided further*, That duties refunded by way of drawback on imported sugar and molasses, or manufactures thereof, shall be ascertained by the same tests as are provided by law to be applied to sugars and molasses when imported; and in no case shall the amount of drawback paid exceed the duty collected on sugar testing one hundred degrees by the polariscope; and all provisions of law inconsistent herewith are hereby repealed.

SEC. 12. That section 2900 of the Revised Statutes be, and hereby is, amended so as to read as follows:

"SEC. 2900. The owner, consignee, or agent of any imported merchandise which has been actually purchased may, at the time, and not afterward, when he shall make and verify his written entry of his merchandise, make such addition in the entry to the cost or value given in the invoice, or *pro forma* invoice, or statement in form of an invoice, which he shall produce with his entry, as in his opinion may raise the same to the actual market value or wholesale price of such merchandise, at the period of exportation to the United States, in the principal markets of the country from which the same has been imported; and the collector within whose district any merchandise, whether the same has been actually purchased or procured otherwise than by purchase, may be imported or entered, shall cause such actual market value or wholesale price thereof to be appraised; and if such appraised value shall exceed by 10 per cent. or more the entered value, then, in addition to the duties imposed by law on the same, there shall be levied and collected a duty of 20 per cent. ad valorem on such appraised value. The duty shall not, however, be assessed upon an amount less than the invoice or entered value, except as elsewhere especially provided in this act."

SEC. 13. That section 2931 of the Revised Statutes be, and hereby is, amended so as to read as follows:

"SEC. 2931. The decision hereinafter described, of the collector of customs at the port of importation and entry, as to the rate and amount of duties to be paid on the tonnage of any vessel, or on any merchandise, and the dutiable costs and charges thereon, shall be final and conclusive against all persons interested in such vessel or merchandise, unless the owner, master, commander, or consignee of such vessel, in the case of duties levied on tonnage, or the owner, importer, consignee, or agent of the merchandise, in the case of duties levied on merchandise, or the costs and charges thereon, shall, within ten days after and not on any day before the ascertainment and liquidation of the duties by the proper officers of the customs, and a statement thereof, and of the date thereof, on the original entry, as well in cases of merchandise entered in bond as for consumption, give notice in writing to the collector, if dissatisfied with the aforesaid decision, setting forth therein, distinctly and specifically, and in respect to each entry, the reasons of his objection thereto, and shall also, within thirty days after the date of such ascertainment, liquidation, and statement, appeal therefrom to the Secretary of the Treasury, who, on receiving such appeal, shall forthwith call upon the collector for a report thereon; and the collector shall thereupon, if he adheres to his decision, set forth, specifically and in detail, to the Secretary, the reasons therefor; and the decision of the Secretary on such appeal shall be final and conclusive, and such vessel or merchandise, or costs and charges, shall be liable to duty accordingly, unless suit shall be brought, within ninety days after the decision of the Secretary of the Treasury on such appeal, for any duties which shall have been paid before the date of such decision on such vessel or on such merchandise, or costs and charges, or within ninety days after the payment of duties paid after the decision of the Secretary. No suit shall be begun or maintained for the recovery of any duties alleged to have been erroneously or illegally exacted, until the decision of the Secretary of the Treasury shall have been first had on such appeal, unless the decision of the Secretary shall be delayed more than ninety days from the date of such appeal. A notice of such ascertainment, liquidation, and statement shall be posted, on the day succeeding the date thereof, in a conspicuous place in the custom-house, accessible to the public, there to remain for ten days, when it shall be removed. The fact of its having been posted shall be noted thereon, signed by the proper officer, and filed with the records of the collector's office; and posting of such notice shall be deemed and taken to be full notice to all parties interested. Whenever there shall, subject always to section 21 of the act of June 22, 1874 (chapter 391), be an amended liquidation or reliquidation, personal notice thereof, in addition to the public notice herein prescribed, shall, in the form and manner to be prescribed by the Secretary of the Treasury, be given to the person or persons who shall have made the original entry; and any such amended liquidation or reliquidation shall be final and conclusive in the same manner as an original liquidation herein referred to, unless the provisions of this section shall have been complied with as to protest, appeal, and suit. And when a suit shall be brought by the United States to recover the additional duties found due on any ascertainment and liquidation thereof, and not paid, the defendant or defendants shall not be permitted to set up any plea or matter in defense excepting such as shall have been set forth in a protest and appeal made as herein prescribed."

SEC. 14. That the section of the Revised Statutes numbered 3012 shall be, and hereby is, amended by adding at the end of said section the following words:

"And there shall be attached to the said bill of particulars, when served as aforesaid, a copy of each and every such protest or notice of dissatisfaction, and of every appeal relied upon by the plaintiff or plaintiffs in said suit; and the said bill of particulars shall declare the date of liquidation."

SEC. 15. That no suit which by this act, or by any law of the United States, is permitted to be begun against a collector of customs to recover money alleged to have been illegally exacted by him on imported merchandise, shall hereafter be begun or maintained in any court of any State of the United States, but each and every such suit shall be begun in the circuit court of the United States for the district in which such alleged illegal exaction shall have been made.

SEC. 16. That section 3012½ of the Revised Statutes shall be, and hereby is, amended so as to read as follows:

"Whenever it shall be shown to the satisfaction of the Secretary of the Treasury (first) that, in any case of unascertained or estimated duties, more money has been paid to or deposited with a collector of customs than as has been ascertained by final liquidations thereof that the law required to be paid or deposited; and also (second) whenever the Secretary of the Treasury shall have decided, on an appeal to him as herein provided, that more money has been paid to or deposited with a collector of customs than the law required; and also (third) whenever any judgment shall have been recovered and entered, in any court of the United States, against a collector of customs, for duties illegally exacted by him on imported merchandise, and a certificate of probable cause shall have been entered in said suit, in compliance with the provisions and requirements of section 989 of the Revised Statutes, from which judgment the Attorney-General shall certify, in conformity with the act of March 3, 1875 (chapter 136), that no appeal or writ of error will be taken by the United States; and from which judgment the Secretary of the Treasury shall also be satisfied that no such appeal or writ of error ought to be taken; and also (fourth) whenever any suit or suits have been begun against a collector of customs to recover money exacted by him and paid under protest, and an appeal, as required by law at the time of importation, and a bill of particulars has been served therein on the defendant or his attorney, as required by such law, and when by the legal effect of any judgment of a court of the United States, satisfactory to the Attorney-General and the Secretary of the Treasury as aforesaid, the said exaction of such duties shall have been declared illegal, and protests, appeals, and bills of particulars have been made according to the law in force at the time of importation, and the proper officers of the customs shall, under the instructions of the Secretary of the Treasury, have reliquidated the entries covered by said suit or suits, and bill or bills of particulars, according to the principles and rules of law prescribed by said judgment, and the district attorney appearing of record for the defendant shall certify that such suits have been discontinued, the Secretary of the Treasury shall, in each and all of the before-mentioned cases, always excepting judgments or "judgment cases" in suits commonly known as "charges and commission" suits, which last named shall only be paid in pursuance of a specific appropriation therefor, draw his warrant upon the Treasurer in favor of the person or persons entitled to the overpayment, or the sum expressed in said judgment, or the sum thus found due on reliquidation of the entries in discontinued suits, including interest and costs payable by law, directing the Treasurer to refund and pay the same out of any money in the Treasury not otherwise appropriated. The necessary moneys therefor are hereby appropriated, and this appropriation shall be deemed a permanent indefinite appropriation."

SEC. 17. That section 2927 of the Revised Statutes is hereby amended by the addition of the following words thereto:

"No allowances for damage to fruits or other perishable goods, wares, and merchandise imported into the United States shall hereafter be allowed in the estimation of duties thereon, except as to seeds and such other commodities as in the judgment of the Secretary of the Treasury do not admit of convenient separation by package or piece; but the importer thereof may abandon to the Government all or any portion of goods, wares, and merchandise of the character last mentioned included in any invoice, and be relieved from the payment of the duties on the portion so abandoned: *Provided*, That the portion so abandoned shall amount to 10 per cent. or over of the total value of the invoice."

SEC. 18. That section 29 of the act entitled "An act to remove certain burdens on the American merchant marine and encourage the American foreign carrying trade, and for other purposes," approved June 26, 1884, is hereby amended by striking out in the first line thereof the word "seventy-six," and inserting in lieu thereof the word "seventy;" so that that part of said section preceding the

word "provided" shall read: "Section 2770 of the Revised Statutes is hereby amended by adding thereto the following."

SEC. 19. That any person who shall give, or offer to give, or promise to give any money or thing of value, directly or indirectly, to any customs officer, in consideration of or for any act or omission contrary to law in connection with or pertaining to the importation, appraisement, entry, examination, or inspection of goods, wares, or merchandise, including herein any baggage, shall, on conviction thereof, be fined not less than $100 nor more than $5,000, or be imprisoned at hard labor not more than two years, or both.

SEC. 20. That any officer of the customs who shall demand, exact, or receive from any person, directly or indirectly, any money or thing of value, in consideration of or for any act or omission contrary to law in connection with or pertaining to the importation, appraisement, entry, examination, or inspection of goods, wares, or merchandise, including herein any baggage, on conviction thereof shall be fined not less than $100 nor more than $5,000, or be imprisoned at hard labor not more than two years, or both; and for the purpose of constituting an offense under this and the preceding section, the giving or offering to give, and the receiving, of any money or thing of value shall be regarded as *prima facie* evidence.

SEC. 21. That section 12 of the act entitled "An act to amend the customs-revenue laws and to repeal moieties," approved June 22, 1874, be amended so that it shall read as follows:

"SEC. 12. That any owner, importer, consignee, agent, or other person who shall, with intent to defraud the revenue, make or attempt to make any entry of imported merchandise by means of any fraudulent or false invoice, affidavit, letter, or paper, or by means of any false statement, written or verbal, or who shall be guilty of any willful act or omission by means whereof the United States shall be deprived of the lawful duties, or any portion thereof, accruing upon the merchandise, or any portion thereof, embraced or referred to in such invoice, affidavit, letter, paper, or statement, or affected by such act or omission, shall for each offense be fined in any sum not exceeding $5,000 nor less than $50, or be imprisoned for any time not exceeding two years, or both; and, in addition to such fine, such merchandise, or the value thereof, shall be forfeited, which forfeiture shall only apply to the whole of the merchandise in the case or package containing the particular article or articles of merchandise to which such fraud or alleged fraud relates; and anything contained in any act which provides for the forfeiture or confiscation of an entire invoice in consequence of any item or items contained in the same being undervalued be, and the same is hereby, repealed."

SEC. 23. That all imported goods, wares, and merchandise which may be in the public stores or bonded warehouses or on shipboard within the limits of any port of entry, or remaining in the customs offices, on the day and year when this act, or any provision thereof, shall go into effect, except as otherwise provided in this act, shall be subjected to no other duty, upon the entry thereof for consumption, than if the same were imported respectively after that day; and all goods, wares, and merchandise remaining in bonded warehouses on the day and year this act, or any provision thereof, shall take effect, and upon which the duties shall have been paid, shall be entitled to a refund of the difference between the amount of duties paid and the amount of duties said goods, wares, and merchandise would be subject to if the same were imported respectively after that date.

SEC. 23. That sections 3011 and 3013 of the Revised Statutes be, and hereby are, repealed as to all importations made after the date of this act.

SEC. 24. That all laws and parts of laws which impose any internal-revenue tax upon snuff, smoking and manufactured tobacco of every description, and upon cigars, cigarettes, cheroots, in all forms, made of tobacco or any substitute therefor, and upon dealers and peddlers therein or manufacturers thereof of every description, whether named expressly or included by implication in any law of the United States, shall be repealed and cease to be in force on and after the 1st day of October, 1886, it being the declared purpose of this act to repeal all forms of internal-revenue taxation upon tobacco of every description on and after the day aforesaid; and all laws now in force whereby farmers and producers of tobacco are restricted in the sale, disposition, and dealing in the same shall be repealed on and after the 1st day of October, 1886.

SEC. 25. That on all original and unbroken factory packages of smoking and manufactured tobacco and snuff, cigars, cheroots, and cigarettes held by manufacturers or dealers at the time such repeal shall go into effect, upon which the tax has been paid, there shall be allowed a drawback or rebate of the full amount of the tax paid; but the same shall not apply in any case where the claim is less than $10 and has not been ascertained or presented within sixty days following the date of the repeal. It shall be the duty of the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to adopt such rules and regulations and to prescribe and furnish such blanks and forms as may be necessary to carry this section into effect.

SEC. 26. That there shall be, and is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, so much money as shall be necessary to repay the rebate provided for under the preceding section of this act.

SEC. 27. That from and after the passage of this act it shall be lawful for any person or persons to manufacture apples, peaches, pears, grapes, plums, berries, and other perishable fruits into brandy and wine, and sell the same, free from any internal-revenue tax or restrictions existing under the laws now in force: *Provided*, That nothing herein contained shall authorize the sale of brandy as herein provided by retail or in less quantities than 5 gallons to any one purchaser: *Provided further*, That nothing herein contained shall be construed to relieve any product of such distillation now on hand from the operation of the law in force when distilled.

SEC. 28. That all laws and parts of laws inconsistent with this act are hereby repealed.

APPENDIX.

A bill to reduce and equalize duties on imports, to reduce internal-revenue taxes, and to modify the laws in relation to the collection of the revenue.

The American Zollverein or Customs Union of America—Progress of the Movement.

SPEECH

OF

HON. RICHARD W. TOWNSHEND,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 30, 1886.

On the report of the committee of conference on the disagreeing votes of the two houses on the amendments of the Senate to the bill (H. R. 6392) making appropriations for the diplomatic and consular service of the Government for the fiscal year ending June 30, 1887, and for other purposes.

Mr. TOWNSHEND said:

Mr. SPEAKER: I am gratified that the conference committee has recommended concurrence in the Senate amendment just read, as follows:

To enable the President to meet unforeseen emergencies arising in the diplomatic and consular service, and to extend the commercial and other interests of the United States, to be expended pursuant to the requirement of section 291 of the Revised Statutes, $50,000, or so much thereof as may be necessary.

In my judgment its importance is due to the fact that under this provision the President may obtain the means which will enable him to properly endeavor to secure the object contemplated in the following joint resolution, which was first introduced in Congress by me on January 7, 1884:

That the President of the United States be, and he is hereby, requested to invite the co-operation of the governments of the American nations in securing the establishment of a commercial league by and between the said nations, to be known as the customs union of America, the arrangement of a common basis of import duties from other countries than those which may compose said league, and that the commercial intercourse among the people of all the American states may be freed from the payment of any customs or other dues whatever; and that a common system of weights and measures may be also established for the purpose of facilitating such intercourse.

By reason of the immense advantage to all concerned of close commercial relations with the countries lying south of us the Chief Executive of the leading Republic in the western hemisphere is warranted inavailing himself of any legitimate means at his command to facilitate future action on this subject even in the absence of legislation. But when, as I shall presently show, he has been virtually authorized by Congress to take this action, I trust that he may feel that a duty is thereby imposed upon him which should be performed as soon as practicable. Before proceeding further I desire to call attention to the fact that, unlike any other that has been previously suggested, this proposition is purely commercial.

All others preceding it touching our relations with the southern countries have been mainly of a political character and involved complications which I do not believe are desirable or compatible with the peace and welfare of our country or other countries on this continent.

This was true of the propositions for alliance with the southern countries under the administration of John Quincy Adams and of the scheme suggested by Mr. Blaine when Secretary of State.

Although the progress in legislation of new movements of such magnitude is usually very slow, yet this has met with very gratifying and rapid success.

It was thought best by the last Congress that before finally considering this proposition more information than we then possessed of the character of the commerce, public sentiment, and feeling of the government officials of those countries should be ascertained; therefore in July following the introduction of that joint resolution the President was authorized to appoint three commissioners to visit the countries embraced in it, who were directed to ascertain the best mode of securing more intimate international and commercial relations with those countries.

The commission was soon thereafter appointed and, as far as its limited time would permit, performed the duty intrusted to it, and has made elaborate and valuable reports, to which I will again refer. These reports were not received in time for further action in the last Congress.

At the beginning of the present Congress I again introduced that joint resolution, and it was referred to the Committee on Foreign Affairs for consideration and report. Other gentlemen, seeing the importance of the movement which I had inaugurated, have, during this session, introduced in both Houses of Congress measures of the same character with more or less elaboration. With but one dissenting voice the Committee on Foreign Affairs of the House has reported with a favorable recommendation a substitute to the same effect.

A more elaborate measure, but of same import, lately introduced in the Senate by Mr. FRYE, has been adopted by that body. The latter designates Washington as the place for the meeting of the assembly, and provides an appropriation of $100,000 to defray its expenses, &c.

It is confidently believed that before the end of the present Congress a measure for the accomplishment of the object embraced in my original proposition will be enacted. But it is not necessary to wait for such final Congressional action, for the reason, as I have already stated, that the amendment under discussion places at the disposal of the President a fund which is sufficient to enable him to invite the co-operation of the American nations and conduct the preliminary proceedings for carrying into effect the main object of the pending measures.

Public sentiment in this country has strongly manifested its approval of this movement. Soon after I first introduced the proposition in Congress it was warmly indorsed and its adoption ably urged by nearly every leading journal of both political parties in all the States of our national Union.

The Democratic national convention of 1884 strongly and expressly indorsed this idea in the following emphatic language:

We favor an American continental policy based upon more intimate commercial and political relations with the fifteen sister republics of North, Central, and South America, but entangling alliances with none.

The Republican national convention of the same year was less pronounced, but it declared in favor of a somewhat similar policy.

Thus it will be seen that this movement has practically received the approval of Congress and the people.

In exercising the authority which I have shown Congress has virtually conferred upon the President he will pursue a policy proclaimed in the platform which he has approved and on which he was elected, backed by an almost unanimous public sentiment. It can not be doubted the President will avail himself of the opportunity afforded by this amendment to discharge promptly an imperative duty which, if successful, will prove a blessing to all the people of the western hemisphere.

The only serious opposition which has been developed to this movement emanates, as might be expected, from the influence of our European competitors in the southern markets. We can not complain of such opposition when we remember that the establishment of an American zollverein will annually transfer hundreds of millions of commerce of the southern countries from the flags of England, France, and Germany to that of the United States.

My proposition was so framed as to exclude European provinces on this continent in order to avoid the direct influence of those nations in the zollverein, and a share in its advantages which would result through their provincial representation.

Already English and German interests have manifested hostility to this scheme, as will be seen by the following editorial of the Two Republics, a prominent journal published in the City of Mexico:

The "congress of American nations" bill has passed the Senate. English and German interests antagonize the act strongly, and the effort to defeat it finally will be powerful. England and Germany are bitterly opposed to any counseling between the states of North and South America. The reason is patent. Germany is the chief influence at this time in Mexican commerce; England is the motive power in the South American trade. Her steamship lines do most of the transportation, her merchants furnish most of the foreign supplies. If the states of the Americas amicably meet and consider their natural commercial relations, the result will very probably be an immediate enlargement of our trade with such states. Our commerce has declined in these directions for a number of reasons. Should the bill mentioned fail to become a law, it will be looked upon and will be a foreign commercial triumph, and means further decadence of our American export trade.

This is a warning that prompt action should be taken by our Government and efficient means employed to promote the formation of the American commercial union in order that American commerce may be controlled by Americans.

A proper consideration of the subject will convince any one that this is the most far-reaching and important before the people of the three Americas, and that it is the duty of every one, who desires to promote the welfare of this country, to see that nothing should be left undone to secure the early success of this movement.

Certainly it will not be antagonized in this country because of differences of opinion on the tariff question. In fact, this proposition will not to any serious extent affect the tariff. Over 82 per cent. of our imports from the southern countries now enter our ports free of duty. The most reliable statistics for 1885 show that of the imports received from those countries in 1885 $66,671,394 entered our ports free of duty, and that duties were collected on only $14,294,598. Therefore but little revenue can be lost to us by this arrangement—a mere bagatelle in comparison with the value of the rich markets we shall secure for our surplus products.

The formation of such a league will render a change in our tariff upon imports from European countries of far less importance than it is now. As I have urged in a previous speech, it is a proposition which protectionists as well as free-traders may consistently favor. For while it does enlarge the area of free trade, it at the same time extends the line of protection for American products against European competition in Mexico, Central and South America.

Some carping critics have doubted the willingness of the southern countries to join us in such a union because, as they assert, the advantages would be largely in our favor. It is gratifying to learn from the report of the commissioner I have mentioned that the statesmen of the southern countries entertain no such narrow views. They see in this scheme what is apparent to all broad minds, that each and all of the American nations—the smallest as well as the largest, the weakest as well as the strongest—will derive inestimable advantages from the formation of an American zollverein. This has been the result in all the countries that entered the German zollverein.

It will be remembered that zollverein was founded by nations as sep-

arate and independent, relatively as different in extent and strength as those existing on the American continent. Customs-houses surrounded the border of each, charging different rates of duties and having different systems of internal revenue.

The marvelously beneficial results and complete success of that zollverein demonstrates the practicability and advantages of a commercial union of a similar character between the countries on this continent. It may be, as was the case in the beginning of the German zollverein, that some of the states of South America will at first hesitate to join the league; but there is no ground to doubt that when they see the mutual advantages which will flow from the trade alliance of their neighbors they will seek admission into the union. I am confirmed in this view, which was expressed by me in my speech in the last Congress, by Mr. Reynolds, one of the members of the commission sent to those countries, who, in a letter addressed last April to the Senate committee concerning Senator FRYE'S bill, says:

It should be distinctly understood, and perhaps be in some way indicated in your bill, that the consent of all the governments invited to the congress will not be indispensable. Power should be given to the President to convoke it, should only some of the governments invited send delegates to it. Diplomatic correspondence, and information heretofore, would indicate that many of those states would, for various reasons, decline the invitation. The countries south of the equator might find it best to form a customs union of their own. Should only the governments of the republics bordering on the Caribbean Sea and Gulf of Mexico—our American Mediterranean—unite in the congress, it should meet without awaiting the action of the other states. A customs union of the latter south of the equator would finally gravitate to a like connection with our own part of the hemisphere, as South Germany did toward the customs union of North Germany.

Indeed enough of the countries embraced in my proposition have already signified their willingness to enter the union to guarantee its success.

It is a source of deep regret that all efforts for close relations with the southern countries prior to the presentation of this proposition have partaken largely of a political character, which, as I have stated heretofore are not desirable or beneficial to any of the states concerned, and would be unwise and impracticable.

If a purely commercial alliance had been sought earlier there is good grounds to believe it would have met with favor from most of the countries of the three Americas.

We have now for the first time been brought directly to the consideration of a union with a purely commercial basis which is practicable and beneficial to all.

Its consummation will prove the wisdom of the present generation and mark an era in the history of this continent ranking in importance with its discovery by Columbus and the establishment of free institutions by the fathers of our great Republic.

The administration which will lead the way to the formation of this union will achieve greater renown than any of its predecessors since the adoption of the Constitution, and will ever be gratefully remembered and admired for having done the greatest good to the greatest number in the western hemisphere, and for having firmly secured the permanent peace, prosperity, and enlightenment of all the nations in America.

SPEECH IN THE LAST CONGRESS.

In order that the purpose and effect of this proposition may be more fully understood, I beg leave to publish with my present remarks a speech on this subject delivered by me in this House on January 10, 1885, and to show the present commerce of those countries I will substitute for my original figures statistics of the latest date, which I have procured in the last few days from the Bureau of Statistics:

Mr. TOWNSHEND. Mr. Speaker, I send to the Clerk's desk a proposition which I intend to offer as an amendment to this bill. It is a copy of a joint resolution introduced by myself in this House January 7, 1884, about one year ago.

The Clerk read as follows:

"That the President of the United States be, and he is hereby, requested to invite the co-operation of the governments of the American nations in securing the establishment of a commercial league by and between the said nations, to be known as the customs union of America, the arrangement of a common basis of import duties from other countries than those which may compose said league, and that the commercial intercourse among the people of all the American states may be freed from the payment of any customs or other dues whatever; and that a common system of weights and measures may be also established for the purpose of facilitating such intercourse."

COUNTRIES EMBRACED IN THE ZOLLVEREIN.

Mr. TOWNSHEND. This is intended to be an initial step for the formation of a commercial league or trades-union of all the independent and sovereign governments of the American continent. It does not include any of the adjacent islands, nor does it embrace any of the provinces of European governments, because I think it best in this scheme to avoid any complications with European governments or interests, and confine it exclusively to American governments. There is more likelihood of securing unity among our own people by avoiding the influence of European powers through their American provinces and thereby avoid disputes among ourselves over the tariff.

It includes only the United States, the republics of Mexico and Central and South America, and the Brazilian Empire.

NOT POLITICAL BUT COMMERCIAL IN ITS NATURE.

This proposition is not political in its character but purely commercial. I do not believe it to be desirable or beneficial for us to make political conquests in any quarter. The welfare of these countries can be best promoted by the continuance of their separate and independent sovereignties. The territory subject to our political power is already large enough. I would rather see our flag supplant that of England over the commerce of the seas, than behold it the symbol of political sovereignty over the whole American continent. We ought not to wish to govern the Spanish-Americans, but to trade with them. They will be unfriendly whenever we approach them with a menace against their independence, but will receive us with open arms when we come with the arts of peace to show them the way and to assist them in the development of their marvelous resources and the promotion of their prosperity.

OBJECT OF THE PROPOSITION.

This proposition it will be seen has for its aim the establishment of free commerce among these countries with a common rate of customs duties against the products of Europeans and others. It contemplates as a basis the same principles as that of the German Zollverein, and would result in bringing about the same freedom of trade on this continent as that which exists among the States constituting our nationality. It would open to our agricultural, manufacturing, and mineral products a free market in these countries, with protection against the competition of England, France, Germany, and the remainder of the world. The American Zollverein would accomplish for the American nations what the German Zollverein has done for the German states. It would develop into vast proportions the trade of the southern countries, which is now so insignificant in proportion to their population and natural resources, for as they become acquainted with our people and observe our mode of living and attainment in arts and sciences their desires for the comfort and conveniences of life will increase.

CAUSE OF PRESENT BUSINESS DEPRESSION.

The present general depression of business, paralysis of manufacturing industries, and low prices of farm products in this country are due to the limited extent of our foreign market. We do not produce too much, but our misfortune is that we can not sell what we produce; therefore, our trade has become stagnant, and unless relief is found greater distress and financial ruin will follow. Bradstreet, in December last, estimated that there were 350,000 unemployed wage-workers in the United States. Three hundred and sixteen thousand two hundred and nineteen of these are enforced idlers. It is also well known that wages have been reduced from 10 to 30 per cent.

EXTENSION OF OUR FOREIGN MARKET THE REMEDY.

Now, how can we find relief from this condition of things? Will diminution of production produce relief? It might increase prices, but it would also increase the cost of living and the number of idle hands and paupers. The surest road to relief lies in the extension of our foreign markets. We must find sale for our surplus products. Where shall we look for these markets? Not to populous and wealthy Europe. She manufactures all the goods she needs, and it is claimed at a cheaper cost than we can furnish them to her. She will take from us only what she is compelled to have—breadstuffs and provisions. But we now supply her with all the agricultural products that she is compelled to take from us.

We can not find the market we seek among the barbarians of Africa. Europe controls the small trade of the few civilized peoples found there. Where, then, can we find this market? Why, sir, it lies at our door. It is nearer to us than to any other commercial nation. It is south and west of us. For the present I will confine my attention to that south of us. It is indeed marvelous, but it is true, that other nations of less enterprise and energy, much farther away, brave the dangers of the Atlantic Ocean, come to our door, and monopolize that market. How strange it is that a prize so much coveted, and in such easy reach, goes to others. Why is it so? Perhaps it is to some extent because we have been so much absorbed in the consideration of domestic issues and local interests that the vision of American statesmanship has only at long intervals been lifted beyond our borders. Let us put aside our domestic wrangles long enough to see if we can not promote the general welfare by finding a foreign market for the fruits of our labor and the employment of our capital.

THE ZOLLVEREIN BETTER THAN RECIPROCITY TREATIES.

I am gratified that the President has taken some steps to enlarge our foreign markets by negotiating the recent reciprocity treaties; and while I am not prepared to say what course I may take with regard to those treaties in their present form, I feel convinced that the proposition which I submit for a customs union will far more effectually accomplish the object we have in view, for the reason that under the most favored nation clauses of existing treaties between the Southern and European countries the same advantages offered us can be secured by them, thereby lessening the value of the privileges which may be obtained by us by such treaties.

But, if the southern countries will enter into such a commercial union with us as I propose we shall secure such exclusive privileges and advantages as will enable us to take away from the European countries most of their valuable commerce on this continent. It would secure freedom of intercourse and exchange with the people of these countries, while at the same time it would set up a barrier against competition from other nations. It is claimed by many that without high protective duties our manufacturers can not compete with European nations within our own borders. How, then, can we hope successfully to do so in foreign lands unless we can obtain privileges not accessible to our competitors. From this point of view it will be admitted that a method must be devised which will restrict the power of our rivals in competing with us or we shall not be able to share to any considerable extent in the trade of the world. I do not admit that tariff protection is essential to commercial success at home or abroad. I will not, however, go into that question here. But will say as enormous tariff duties are laid to raise revenues for the support of the southern governments all can see how greatly the advantage would be in our favor if our products should enter these countries free while European products should continue to be burdened with duties.

WHAT SHALL WE GAIN FROM SUCH A UNION?

Now let us see what we would gain by such an alliance. Fairer lands are not to be found beneath the sun than those lying south of us. Nature with her bounteous hand has endowed them with her richest blessings. She has favored them with more hidden mines of wealth, luxuriant vegetation, majestic trees, luscious fruits, and greater fertility of soil than she has any other. If their population and development of resources were commensurate with the earth's surface which they cover, the states established there would be among the most powerful of the world. It is to the acquisition of such a grand field for American enterprise and commerce that my proposition points the way. It was the land of semi-civilization, learning, wealth, and commerce when our own land was steeped in barbarism, ignorance, and abject poverty. They had educated people, palaces, temples, houses, and cities when the land we occupy was peopled with savages living in wigwams and the open air.

AREA AND POPULATION OF THESE COUNTRIES.

The Bureau of Statistics of the Treasury Department has very kindly furnished me tables showing the area and population of those countries, their capitals and principal seaports, which I will append to my remarks. I am also indebted to that bureau for some other valuable statistics that I may use in my remarks.

From these tables it will be seen these countries cover an area of 8,118,844 square miles, and have a population according to the latest reliable data of 42,770,374. The development of the internal resources of those countries and the more frequent intercourse with our own people which this union will secure, will vastly increase their population, wealth, and importance. This was the immediate effect of the creation of the German Zollverein upon the German states. The great natural advantage which we have over European governments will be seen from an examination of the distances between our chief seaports, those of the southern countries, and England.

Their ports on the Atlantic are part of the same coast-line with New York and New Orleans, and the Pacific ports occupy the same coast-line with San Francisco. We already have a continuous railway for shipments, without breaking bulk, from our railway systems to the heart of Mexico, which might and doubtless will be extended into every country in Central and South America, whereas over 4,000 miles of ocean travel separate their nearest ports from European markets. The natural advantages, with others which would flow from the establishment of this commercial union, ought to give us nearly all the trade with these countries.

WHERE THE SOUTHERN COUNTRIES BUY THEIR IMPORTS.

Let us see from whom they now buy their imports.

The statistics for 1885 show the value of the imports of merchandise into the following nations of Mexico, Central America, and South America from the United States and Great Britain and France, as follows:

Imports of merchandise into—	From United States.	From Great Britain.	From France.
Mexico	$7,370,599	$4,953,445	$3,957,121
Central American states	2,667,943	4,352,593	267,844
Colombia	5,397,412	5,646,625	5,281,586
Venezuela	2,992,968	2,920,873	874,337
Brazil	7,258,035	31,495,866	12,064,304
Uruguay	1,601,759	7,708,499	3,936,414
Argentine Republic	4,327,026	28,277,825	23,007,742
Chili	2,192,672	10,109,233	3,857,911
Peru	735,979	5,259,976	2,039,089
Total	34,544,393	100,777,925	55,286,348

The total foreign commerce during the latest year for which data were attainable was as follows:

Imports of merchandise, coin and bullion	$324,451,314
Exports of merchandise, coin and bullion	390,038,451
Total	714,489,765

Of the $190,608,665 domestic merchandise exported from the United States, Great Britain, and France to those countries, the share of the United States was only $34,544,393, or 18 per cent. And yet we are their closest neighbor and have easiest access to them.

THE TRADE WITH CHILI AND PERU, ETC.

But see how humiliating is the insignificant share which we have in the import trade of Chili and Peru, as compared with that of our European competitors. England imported into these countries, in 1885, $19,390,661; France imported $5,897,000; their imports from the United States were only $2,928,651. England sold them nearly six times as much as we did. The disparity in the trade with Peru is absolutely astonishing. England sold to the Peruvians, $5,259,976, France sold them $1,000,287; and yet, with all our boasted enterprise, we only sold our Peruvian neighbors $735,979, notwithstanding Callao (Lima) lies on the same coast-line with San Francisco, whereas England, after traversing the Atlantic Ocean and incurring the hazards of a voyage around the Horn for a distance of 11,604 miles to the same port, or via Straits of Magellan of 10,162, or else by breaking bulk and crossing the Isthmus of Panama, a distance of 5,912 miles, outstripped us by selling the Peruvians nearly ten times as much merchandise as we did.

Surely these startling figures should put every American statesman on inquiry for some way by which we may obtain at least a fair proportion of the commerce of the continent on which we live. The census of 1880 revealed to us the fact that only 2 per cent. of our manufactures reached the foreign markets. Had it not been for our farm products, which constituted over 77 per cent. of our exports, our foreign commerce and financial condition would be subjects of pity if not contempt with all civilized people. With such facts staring us in the face, is it to be wondered that we have stagnation in business and distress among our people? Can anything else be expected if we lack the wisdom and enterprise to sell our surplus products to our nearest neighbors, who would unquestionably rather deal with us than with countries across the seas? Financial ruin is inevitable to the manufacturer who can not sell his wares or the farmer who can not market his products.

HOW THIS TRADE MAY BE SECURED BY US.

We have the capacity to furnish all the merchandise that goes into these countries; but while of course this can not be expected, yet if the American zollverein is established the foregoing figures would be reversed and our trade would exceed that of combined Europe.

As I have already intimated, the reason assigned by protectionists why our trade in the southern countries is so meager is because, owing to cheaper labor and abundance of capital in Europe, we can not compete with those manufacturing nations. On the other hand, free traders insist that our inability for successful competition arises from the high price of raw material and cost of living, occasioned by high protective-tariff duties. Now, this scheme, if adopted, would obviate the difficulties which both of these theorists claim to exist, for by establishing a common rate of duties on European products, with a free market for all American products, we would be able to undersell our foreign competitors in the southern markets.

NO SERIOUS LOSS OF REVENUE ON ACCOUNT OF THIS UNION.

No serious loss of revenue to the United States would occur, for the reason that over 82 per cent. of our imports from these countries now come to us free of duty. On the other hand, all our exports into those countries are heavily taxed at their custom-houses.

The following table will show the amount of dutiable and free imports into the United States from the nations mentioned during the year ending June 30, 1885:

Countries.	Free.	Dutiable.
Mexico	$5,173,441	$4,093,580
Central American states	6,149,573	259,142
Brazil	38,136,191	7,127,469
Colombia	2,335,083	6,994
Argentine Republic	3,154,337	1,174,173
Venezuela	6,267,887	41,693
Uruguay	2,317,139	417,478
Chili	399,464	205,061
Peru	1,749,632	15,258
All other South American countries	998,347	953,750
Total	66,671,294	14,294,598

Our Louisiana sugar friends need not fear competition from the sugar-planters of those countries, for only $8,057,439 of sugar was imported from all those countries during that year.

Brazil sent us $45,263,660 and only took from us in exchange $7,317,293. Of the whole amount imported from that country $38,136,191 were free of duty, whereas everything sent to Brazil was heavily taxed. Not only does she tax all we send her, but she levies an export duty on all the coffee we buy from her, which constitutes $30,346,792, or over two-thirds of all our imports from that country. Our trade with Brazil is so greatly to our disadvantage as to make it a one-sided affair; she has the lion's share.

EFFECT OF THE ZOLLVEREIN ON COUNTRIES CONCERNED.

I believe that this union would, as in the case of the German Zollverein with Germany, stimulate the development of the resources of all the members of the union, would divert our southern republics from the tendencies to frequent revolution, and turn their attention to the cultivation of the arts of peace, and at no remote day make this the most prosperous continent known in history. It would at once infuse new life into the industries of the United States, and put in operation every silent factory, relight our forges, start every plow in the farm season, give employment to every idle hand, furnish remunerative use for every surplus dollar, and revive our industry of ship-building.

THE WAY TO REBUILD OUR MERCHANT MARINE AND NAVY.

Perhaps there is no public question of paramount importance to that of rebuilding the American merchant marine and navy. I will not dwell here upon the causes which have produced the sad condition of our ocean commerce and the humiliating position of our flag on the seas. All recognize the insignificance of our shipping interest aside from our coastwise service. It has fallen from the proud position of rivalry with the greatest maritime powers under President Van Buren to the foot of the list under President Arthur. Then over 84 per cent. of our imports and exports were carried on American bottoms, now it has fallen to 16 per cent.

Twelve lines of steamers run to Europe from the Argentine Republic, but none to the United States.

It is stated in the daily press that last year only two American vessels sailed from New York to Europe, neither of which were steamers.

We are paying now over one hundred millions annually to foreign ships for carrying our commerce. Nothing can be done, in my judgment, which will more effectually and permanently rebuild our mercantile marine than the establishment of the American customs union.

One of the prime questions to be considered by members of the American customs union would be the means of transit and intercourse. As between the United States and all those countries, except Mexico, the connection will be by water. Articles should be adopted by the Zollverein assembly which would apply the benefits of the freedom of commerce and exchange only to goods carried on vessels owned by the countries forming the union. This is the only method which will secure for us what the President in his last message expressed the hope of obtaining by reciprocity treaties, in which he says:

"First, a series of reciprocal commercial treaties with the countries of America which shall foster between us and them an unhampered movement of trade. The conditions of these treaties should be the free admission of such merchandise as this country does not produce, in return for the admission free or under a favored scheme of duties of our own products, the benefits of such exchange to apply only to goods carried under the flag of the parties to the contract; the removal, on both sides, from the vessels so privileged of all tonnage dues and national imposts, so that those vessels may ply unhindered between our ports and those of the other contracting parties, though without infringing on the reserved home coasting trade; the removal or reduction of burdens on the exported products of those countries coming within the benefits of the treaties; and the avoidance of the technical restrictions and penalties by which our intercourse with those countries is at present hampered."

I have already stated the reasons why I did not think exclusive advantages can be obtained by such treaties—because existing treaties between those countries and European nations entitle them under the favored-nation clauses to the same benefits and advantages that may be granted to us. But by the establishment of an American Zollverein all countries outside of the verein would be excluded from the benefits and privileges I have indicated. This would give us control of the carrying trade of this hemisphere. It would revive our languishing shipping interest, and lift it from the foot of the list to the highest degree. We would eventually dethrone England's sovereignty of the seas and become the great maritime power of the world; for the great increase which that trade would give to our shipping would enable our ship-owners to compete for a fair share of trade in all the seas. It would send our flag to ports where it is now a stranger, and transport American products under an American flag on American bottoms to the markets of the world.

HOW TO REBUILD THE NAVY.

By rebuilding the American merchant marine we will lay the best foundation for rebuilding the American Navy. In the report of the Admiral of the Navy last year will be found the following observations:

"I have long looked forward to the time when Congress would take some steps toward resuscitating our mercantile marine, which has long been languishing for the want of Government action in its behalf. A large number of merchant steamships would in time of war be an important adjunct to our regular naval force, for many of them would, with comparatively little alteration, make the best commerce-destroyers in the world, and also the best destroyers of commerce-destroyers."

This quotation renders any remarks of my own on this branch of the subject unnecessary.

As the German Zollverein united countries connected by land, no such immense advantages could result to the merchant marine of any of those countries as would be brought about by such a union among the American nations.

THE ZOLLVEREIN WOULD SECURE GENUINE RECIPROCITY.

An "American customs-union" would secure genuine reciprocity of trade and mutual advantage. It would bring to us products not adapted to our climate and which we must have in exchange for our surplus products; these, with but few exceptions, are not produced in those countries. There is a greater degree of reciprocity of trade on lines of longitude than on lines of latitude. In one case there is a similarity of products because of a similarity of climate; whereas in the other the products are different because of a difference of climate, and therefore the necessity and desire for interchange of commodities exist in the highest degree.

The Spanish-American countries have no factories of consequence. They will not, therefore, furnish competition with our manufacturers, but they will need our manufactured articles, as well as our breadstuffs and provisions, and we need their raw materials. Then let us freely trade.

ITS EFFECT ON ISTHMIAN CANAL QUESTION.

If such a league or union should be established it will be a matter of but little consequence by whose capital an isthmian canal is built, whether of France, England, or Germany, or of all united, for the community of interest among the states of the American zollverein would intensify the Monroe doctrine and unite all the members of the union in opposition to any attempt at political or commercial dominance of any European power on this continent.

The difference of weights and measures existing between us can be equalized by the zollverein assembly.

THE MONETARY UNION AND SILVER COIN.

I see no reason why this union could not properly perform the functions contemplated by the excellent suggestion of the President in his last message for the establishment of a uniform currency basis for the countries of America, thereby utilizing the surplus productions of our mines and mints and removing all pretexts for the demonetization of silver. There is no need of the separate existence of what the President calls a "monetary union of America," for the "American customs-union" can carry out his idea, and by it, as he expresses it, the "output of the bullion-producing countries and the circulation of those which yield neither gold nor silver could be adjusted in conformity with the population, wealth, and commercial needs of each."

DISCRIMINATION AGAINST AMERICAN PRODUCTS IN EUROPE.

Some European countries have declared war upon the introduction of our meats and breadstuffs into Europe and have adopted measures discriminating against them. Heretofore they have based their opposition to our hog products on the false pretense that they are affected with trichinosis, although the scientists of those countries have by the most thorough and convincing tests demonstrated the absolute falsity of the charge. In February, 1883, the German parliamentary bodies finally adopted enactments prohibiting their importation into that empire. I immediately presented to this House a joint resolution authorizing the President to adopt retaliatory measures against certain German imports; but this was done so near to the close of the then short session that it could not be reached for consideration. I presented a similar measure at the commencement of the next session applicable to other European governments which had pursued the same course, and it was referred to a committee, where it now lies, without final action. Three committees struggled for jurisdiction over that measure when it was presented; but it seems that their zeal over the question has ended.

When it is remembered that statistics show that we have in this country 47 per cent. of all the hogs in the world, I submit that our interest is large enough to deserve some protection against such unjust action.

France soon followed the course of Germany, but not content with assailing our meat product she has restricted the importation of our breadstuff by burdensome taxation.

Emboldened by the supineness of the American Congress in the face of these outrages against our agricultural products, and the indifference manifested for the protection of these interests in the European markets, Austria is advancing to a position of open hostility to all American commerce in Europe.

EUROPEAN COALITION AGAINST AMERICAN FARM PRODUCTS.

She uses no mask of false pretenses that our merchandise is unwholesome, but openly advocates a continental coalition against the importation of any and all American farm products in Europe. To foster their agricultural interests, and prevent competition from American farmers, Austrian statesmen and press advocate the prohibition of our agricultural products as "the only salvation for the European peasant for the future." The Vienna Tagblatt urges as a reason for prohibition that the United States has vastly superior natural advantages in our immense area of fertile lands, capable of permanent and almost unlimited productiveness; that, having no standing army to maintain, the States do not take the working population away from the soil to make soldiers of them; our farmers are free from the immense burdens resting upon the agriculturists of Europe. "Therefore," says the Tagblatt, "American competition can only be overcome by shutting out the American from the European market." And it is asserted that the chief minister, Taaffe, is an advocate of the project.

Time will show whether the consumers in Europe will submit to a policy which will enormously enhance their cost of living, or whether discontent may not only grow into bread riots, but also to such formidable disturbances as will shatter the despotic governments guilty of making such oppressive laws. But there is enough in this movement to warn us that our domestic industries are seriously threatened. England is making considerable headway in finding new sources of supply of her breadstuffs in India, Australia, and other provinces of hers. If she should fall in with the Austrian movement, our agricultural interest will indeed reach a deplorable condition unless we can find an outlet for our surplus in the southern and the Pacific Ocean countries. If we can control the southern markets through the agency of a zollverein, we may not only defy European combination but we shall strike a blow against her manufacturing interest which will do her far more harm than any advantage she may gain by the prohibition of our agricultural products.

EFFECT OF THE ZOLLVEREIN IN GERMANY.

One of the most eminent living political economists has said that the German Zollverein was "the result of the highest sagacity, intelligence, and wisdom." Its wholesome and salutary action caused an immediate and marked improvement in the condition of the German states, and the enlargement of their commerce. The progress of the Saxon cloth manufacturers in three years following their admission to the Union, from 1834 to 1837, is stated in an official report to have been greater than in the thirty years preceding.

PLAN OF THE GERMAN ZOLLVEREIN RECOMMENDED.

The proposition which I submit does not prescribe the terms upon which this union shall be formed. It merely authorizes the President to invite the co-operation of those governments in forming a union upon such conditions as their representatives may after due deliberation determine. There is nothing in this proposition that binds them to any conditions, but they are left perfectly free to decide whether any alliance will be desirable, and, if so, what shall be its nature. I believe they will find the plan of the German Zollverein most desirable. No doubt some of its features will be found incompatible with the institutions and conditions on this continent. All such can be modified or wholly rejected, and others substituted which may be found more suitable.

If the union is formed experience will in time, no doubt, show the need of change in the original terms of its organization, which can be made by the members of the union when their representatives assemble at such stated periods as will be designated; for there should be annual or other regular meetings of the representatives of the nations concerned to consider the general welfare, hear complaints, adjust difficulties, and make such new enactments as may be required.

HISTORY AND NATURE OF THE GERMAN ZOLLVEREIN.

The German Zollverein has been tested by the experience of over sixty years. Such defects as were discovered have been remedied. Its members have during that long period sought harmoniously the utmost degree of practicability. The right and interest of all have been scrupulously guarded and respected. Each and all have derived inestimable advantages from its formation. The smallest and weakest states, as well as the largest and strongest, have been benefited. So successful and beneficent has been its results that the eminent political economist, McCulloch, in his great work, has declared of Prussia, who was chiefly instrumental in forming the union, that—

"Next to the efforts of the Prussian Government to diffuse the blessings of education their efforts to introduce a free commercial system into Germany constitutes their best claim to the gratitude and esteem of their own subjects and of the world."

Mr. McCulloch defines the word zollverein (literally customs union) as a compound word:

"It means the association of a number of states for the establishment of a common customs law and customs line with regard to foreign countries, and the suppression of both for the intercourse of the states with each other within the border line. The compound word, however, has gained the meaning of a proper name for the German customs league."

The character of the zollverein is described as follows by that eminent writer:

The first treaties in furtherance of this object were negotiated by Prussia with the principalities of Schwarzburg-Sondershausen and Schwarzburg-Rudolstadt, in 1818 and 1819, on the principle that there should be a perfect freedom of commerce between these countries and Prussia; that the duties on importation, exportation, and transit in Prussia and the principalities should be identical; that these should be charged along the frontier of the dominions of the contracting parties; and that each should participate in the produce of such duties in proportion to the population. All these treaties subsequently entered into have been founded on this fair and equitable principle; the only exceptions to the perfect freedom of trade in all the countries comprised within the league of tariff alliance being confined, first, to articles constituting state monopolies, as salt and cards in Prussia; second, to articles of native produce burdened with a different rate of duty on consumption in one state from what they pay in another; and third, to articles produced under patents conferring on the patentees certain privileges in the dominions of the states granting the patents. With these exceptions, which are not very important, the most perfect freedom of commerce exists among the allied states.

"Since 1818, when the foundations of the alliance were laid, it has progressively extended till it now comprises more than three-fourths of the Germanic states, exclusive of Austria. Ducal Hesse joined in the alliance in 1828, and Electoral Hesse in 1831; the Kingdoms of Bavaria, Saxony, and Wurtemberg joined it afterward, as have Baden, Nassau, and almost all the smaller states which have since been annexed to or are still nominally independent of Prussia, with the exception of Mecklenburg-Schwerin and Mecklenburg-Strelitz. * * *

"Throughout the whole extent of this immense country, from Aix-la-Chapelle, on the eastern confines of the Netherlands eastward to Tilsit, on the confines of Russia, and from Stettin and Dantzig, southward to Switzerland and Bohemia, there is nothing to interrupt the freedom of commerce. A commodity, whether for consumption or transit, that has once passed the frontier of the league, may be subsequently conveyed, without let or hindrance, throughout its whole extent. Instead of being confined within the narrow precincts of their own territories, the products of each separate country of the alliance may be sent to every one else, so that each may apply itself in preference to those departments in which it has some natural or acquired advantage, and each has to depend for its success, not on the miserable resource of customs regulations, but on its skill and industry. The competition thence arising is most salutary, and, should the peace of Europe be preserved, we run little risk in saying that all sorts of industry will make more progress among the states comprised within the tariff alliance, during the next ten years, than they did during the half-century previous to its being organized.

"An assembly of representatives from the allied states meets annually to hear complaints, adjust difficulties, and make such new enactments as may seem to be required. The Prussian tariff has been adopted, with certain modifications. The duties are received into a common treasury, and are apportioned according to the population of each of the allied states. In addition to its other advantages, the new system has reduced the cost of collecting the duties to a mere trifle compared with its former amount, and has enabled hundreds of customhouses and thousands of custom officers to be employed in the different departments of industry.

"The discrepancy in weights and measures used in different parts of Germany occasioned considerable inconvenience, and it is important that the equalization of weights and measures, and their reduction to a common standard in all the allied states, is declared to be one of the objects of the league."

In order that the nature of the Zollverein may be fully seen I will append to my remarks a translation of the more important clauses of the customs treaty of March 22, 1867, as I find it in the work I have heretofore mentioned, which clearly presents the articles of that union.

WILL THE SOUTHERN COUNTRIES JOIN US IN SUCH A UNION?

It may be that some of the southern countries at first will hesitate to join us in such a league, as was the case at the beginning of the German league, but if only a few of those nations would join us at the beginning I have no doubt all others, seeing the mutual advantages which would flow from such a union, would eventually seek admission into the alliance. This was the history of the German Zollverein. Yeates, in his work on Recent and Existing Commerce, when discussing the zollverein, says:

"Many states delayed joining, in the belief they would lose rather than gain. * * * Others did not like to merge their individuality, trivial as it was, in the convention, and were encouraged in a sort of independence by England and France."

Some who have commented upon this proposition have expressed the belief that the southern countries would not enter into such a union with us, because as they derive most of their revenue from impost duties, the free introduction of American products would supply their markets and diminish their custom receipts to such an extent as to force them to some new method for collecting revenue. But, sir, if the plan of the German Zollverein is adopted, and we should follow the course pursued by Prussia, no such difficulty will arise. Yeates says:

"Prussia made considerable sacrifices to conciliate the numerous German states whose predilections for Austria, jealousy of Prussia, or fears of self-immolation caused them to hesitate in joining the league. Thus, by the stipulation of proceeds according to population, Prussia should have received three-fourths of the tolls, but accepted five-elevenths."

The immense advantages otherwise gained by Prussia as the dominant nation in population, wealth, and industrial development fully compensated for all the sacrifices she made. The enormous advantages which would accrue to us; our superior producing power and capital, and the free introduction of our surplus products in those countries, as well as in many other ways, would undoubtedly far exceed any sacrifices we might make to induce our weaker neighbors to join us in this league. The large increase of our business resulting from our enlarged markets would cause such an increased demand for imports from other countries as would make good any loss of customs revenue by division among the other members of the union.

I shall advert to this question again and show by a comparison of facts and figures, based upon the trade statistics of all the countries which are eligible for membership in the customs league, that we shall gain more by the remission of duties upon our merchandise exported to countries in the zollverein than we shall lose upon the merchandise imported by us from them, and that both we and they shall be gainers as against the countries not admitted into the union.

Several of the southern countries by recently contracting commercial reciprocity treaties with us have manifested a strong desire to establish free commercial relations with us. When the commission authorized at the last session of Congress to gather statistics, &c., of the trade of those countries were in the City of Mexico a few weeks ago President Diaz assured the commission that his government was disposed to do everything possible to build up the trade and to facili-

tate the commercial relations of the two countries. He said Mexico is disposed and prepared to go as far in this direction as the Government of the United States.

The World's International Exposition at New Orleans would have been an auspicious occasion for the assemblage of such a meeting of representatives as is here contemplated, and had this proposition been adopted, as I urged in this House at the last session, time enough would have been afforded for the appointment of representative by all the governments concerned. Even now its speedy adoption as an amendment to this bill would impress the agents and visitors from these countries to the New Orleans Exposition with its importance and practicability, and when they return to their home governments they would no doubt be largely instrumental in securing their favorable action. Some idea of the interest which they have taken in that exposition can be ascertained from the fact that Mexico appropriated $300,000 for her exhibits there, and has erected on the exposition grounds two large and magnificent buildings in the Mexican style of architecture.

But, sir, even if the representatives of those governments when they assemble should determine that it is unwise or inexpedient to establish such a union and separate without further action, much good would still result from this assemblage in directing the thoughts of the people of those lands to the benefits which will result to the general welfare by the cultivation of more intimate acquaintance and closer commercial relations than now exist.

EFFECT OF THE UNION ON OUR TRADE WITH WEST INDIES, CHINA, ETC.

The successful establishment of this union would lead to better trade relations with the West Indies and the countries bordering the Pacific Ocean, by means of which if we do not outstrip Europe in those markets we may at least obtain the share in that trade which our juxtaposition to those countries and our similarity of political institutions justify.

The West Indies imported	$117,408,154
The West Indies exported	130,530,540
Total	247,938,694
The United States sent there	24,748,226
The United States brought from there	64,577,078
Total	89,325,304

Of the $247,938,694 imported into the West Indies only $24,752,226 came from the United States.

The values of imports and exports of the West Indies here given represent merchandise and specie, and are for the year 1883 with the exception of those in regard to Cuba, which are for the year 1877, the latest years for which the data could be obtained from the statistics of those countries.

According to the latest obtainable data the imports and exports of the West Indies were as follows:

Total value of imports of merchandise and specie	$117,408,154
Total value of exports of merchandise and specie	130,530,540
Total value of imports and exports	247,938,694

During the fiscal year 1883 the imports and exports of merchandise and specie between the United States and the British West Indies were as follows:

Exports of merchandise and specie from the United States	$36,109,109
Imports of merchandise and specie into the United States	92,820,884
Total	128,929,993

Of the value of imports into the West Indies, amounting to $117,408,154 as above indicated, only $36,109,109, or 30.76 per cent., was exported from the United States, but of the exports from the West Indies valued at $130,530,540, $92,820,884, or 71 per cent., was imported therefrom into the United States.

The countries lying in and around the Pacific, facing the west coast of the United States, imported $529,553,000, of which the United States supplied the sum of only $20,497,000, or less than 4 per cent.

RICH RESULTS TO UNITED STATES.

If this Government will lead the way and secure this alliance with the southern countries, we will speedily realize the rich results which will flow from the present southward tendency of material development, such as the projected routes across the isthmus, connecting the two oceans, the extension of our railway system to the City of Mexico, the projected intercontinental railway through Southward Mexico and the fourteen other republics of Central and South America, the steamship lines in operation and projected from our Atlantic, Gulf, and Pacific ports to the Spanish-American ports and the countries in the Pacific.

CAN NOT BE ACCOMPLISHED BY WAR.

What we may achieve by this union can never be conquered by war. We want their friendship and trade. They can be obtained by the arts of peace, but not by the arts of war. For these purposes the pen is indeed mightier than the sword. Treat the southern countries as sisters in an American family of nations and they will follow our lead with love and pride. Such a policy will give us a position and power in the history of the world far greater and more enduring than that which Rome ever achieved by bloody conquests. Her policy provoked the hatred of the world, and she ruled it only so long as she was able to wield the sword of the world.

Peace hath her victories
No less renowned than war.

WHO WILL OPPOSE THIS PROPOSITION?

Now, who is there here that will oppose such a scheme? Will any advocate of protection do so? Surely he will not, for it extends the line of protection beyond the borders of the United States and embraces all the southern nations. It protects our manufactures not only against European competition in the United States but also in Mexico, Central and South America. A protectionist who would oppose this proposal would advocate restrictions upon the commercial freedom among the States of this Republic.

Will any advocate of free trade oppose this proposition? Certainly he will not, for it enlarges the area of free trade and demonstrates its advantages over a restricted market.

Our farmers, mechanics, and capitalists are not afraid of competition from those southern countries. The only class who seem to hesitate moving in the direction I have indicated are politicians who fear to grapple with new questions. Some of them are too busy in the pursuit of office to bestow attention and study upon questions broad enough to embrace a consideration of our commercial relations with the world.

This is not a partisan political question; it rises higher than partisanship; it is a question of the highest statesmanship. I am, however, convinced that the party which shows itself possessed of wisdom and progressiveness sufficient to enable it to rise above merely domestic issues and lead the way to securing our rightful share in the commerce of the world will in the future be awarded the greater glory and renown.

THE REPORT OF THE COMMISSION TO THE SOUTHERN COUNTRIES.

The commission which was authorized by the last Congress and appointed by President Arthur for the purposes mentioned had its origin in the joint resolution I introduced.

The active members of the commission consisted of Messrs. T. C. Reynolds, of Missouri; Solon O. Thacher, of Kansas, and William E. Curtis, of Illinois. In pursuance of the directions of the law they visited most of the southern countries, and have presented elaborate and ably written reports, furnishing valuable information and suggestions, which were submitted to this House last January. Bearing upon the subject under consideration the final report states:

The attainment of closer international and commercial relations between our country and these republics is easily accomplished. Our reports have frequently called attention to the feeling of admiration with which the progress, wealth, and power of our land are regarded by the other countries of the western hemisphere. They one and all find in our history a model for their own institutions, and our moral support and approbation are prized above those of any and all other nations. Hence our advances toward a more perfect understanding and greater confidence will meet with a quick and true response. There will be no prejudices to overcome, no antipathies to remove, few differences of constitutional life to adjust. The result of our observations leads us to believe that these republics have felt that our country heretofore has given them too little thought; that in its greatness and introspection it has failed to take a warm interest in the trials and struggles of peoples who are striving to realize for their own countries something of the peace and prosperity that belong to what they always term "*La Grande Republica.*"

Unless we have been completely misled by the expressions and protestations of the ruling powers of each and every one of the governments we have visited, the only estrangement possible between them and us will flow from our own indifference and neglect. Indeed, we have already lost much that naturally belongs to us from this cause. Every president and cabinet officer, every leading and thoughtful citizen we met joined in the sentiment of gratified surprise that our country had taken the initiative by this embassy in bringing about more cordial and hearty communication between the various republics and our own. In our effort to reach more intimate relations we have, then, this basis of kindness and desire upon the part of those we seek to reach as a foundation for our action. We shall plant seed in a genial soil, beneath a propitious sky.

To the foregoing considerations we may add the beneficial influence of the proposed convention of representatives of the states of the western hemisphere. Our several reports show with what warmth the suggestion has been welcomed by nearly every country we visited. It is cordially indorsed by all save Chili, which only gave a qualified assent.

The general opinions of the governments visited point to the propriety of this country's issuing the call for the convention, fixing time, place, membership, and also suggesting in the invitation a list of topics for discussion, at the same time conceding to every state represented the right to bring forward such other subjects affecting the welfare of all as it may deem best.

Not only should the call and programme emanate from our Government, but the assembly should convene in the United States under its hospitable welcome and direction. The details we do not enter upon, though we may be permitted the quite obvious reflection that the range of topics should be so varied that in some one or more of them each state should feel a particular interest, and the general scope of all tend to the prosperity and common good of all. We can well believe that the discussion of these topics which pertain to the common weal would be followed in each state with profound interest, the conclusions reached, especially if found with much unanimity, of great practical good, and the general result of a joint deliberation of the several peoples on questions of moment to each would inevitably weave into firmer fabric the warp and woof of the threads of friendship and interest and communication reaching from one to all the rest. Neither need we point out the value to our country in many ways of filling the position of a generous host, welcoming to our homes and estates guests whose good opinion we desire to win by sincere courtesy and a just revelation of our noble national character.

To this end the representatives should enjoy extended opportunities to become familiar with the marvelous economies, politics, industry, education, and religion out of which our greatness has sprung. No limited or contracted parsimony should bound our efforts to exhibit in fair colors the magnitude and glory of that temple of freedom in which we worship. Every section of our land would reveal to their eyes, in language stronger than words, the wealth, progress, and happiness that attend a people whose institutions are founded on equality, where the poorest and weakest citizen has his wrongs redressed and his rights protected equally with the strongest and most wealthy. From such a survey they would carry home deeper respect for a country whose religion, unaided by the civil power, builds shrines in every neighborhood where the humblest may kneel and adore according to his conscience, where education rains down on every rank of life manifold blessings, and where obedience to the expressed will of the majority is deemed a sacred duty.

In such a convention could be discussed, as was suggested by some of the states consulted, the plan of agreeing upon a common silver coin which should be current among all the states of the American continent at its face value. This proposition has been favorably entertained by all the governments advised with as one which would add value to the silver product and prove a potent factor in promoting commerce between the countries adhering to it.

The states of Central and South America stand ready to respond heartily to our call for such a convention, and once held it would prove doubtless the forerunner of many more whose influence would be puissant in promoting more intimate relations both international and commercial. * * *

The increase of consumption in the countries of Central and South America is so great that trade is not in such deep grooves as it is where demand and supply remain constant. New enterprises are starting to life in those regions; new merchants and traders, many of them foreigners and some our own countrymen, are engaging in business, and by their push and vim are supplanting those who follow the methods of the past. In this nascent life of trade there is a chance for diversion and division. Our commerce with these countries could be increased immensely were the question of freights resolved as favorably for our manufacturers as it is for the European. The importance of seizing the commerce of a country and turning it into channels friendly to ourselves is the more apparent and pronounced as that country is in a formative state. * * *

All those lands we refer to have scarcely begun to realize the prosperity, progress, and development that await their future. So boundless are the gifts of nature that we can well believe them capable of nurturing millions of people where now are only thousands. So well are these natural resources understood that tides of immigration are flowing thither from many of the overcrowded centers of the Old World. It is an auspicious time for the United States to turn these small currents of trade, soon to be great rivers, into our own harbors.

Commissioner Reynolds in his separate report says:

The chiefs of state in the countries visited were assured that the commission came not to discuss claims or counter-claims, the irritating incidents of ordinary diplomatic intercourse, and with peace in one hand and war in the other, but

as was said in the address to the President of Mexico, "with peace in both hands." The responses to the commission's addresses (copies of which accompanied the special reports, respectively) and the cordial receptions given to the commission everywhere, by the authorities and private persons, abundantly show that the desire for "intimacy and relationship" was most entirely reciprocated. It will be for the regular diplomatic agents of the Government to avail themselves of this "era of good feeling" in aid of future negotiations about commercial or other questions.

Commissioner Thacher, in discussing this subject before the Senate Committee on Foreign Relations during this session, says:

The wonder remains that notwithstanding all this neglect to cultivate and encourage those nations they still admire our greatness, and long for a nearer bond of union and fellowship. Every line of the reports of the many conferences held by the commission with the representative men of those nations shows how fervently and with what glad surprise our overture for a convention of all the nations of the American continent was welcomed.

* * * * * * *

I have no doubt of there being present at the convention when called by our country representatives from every one of the western powers, and that these delegates will be men of great weight at home in all the matters affecting their foreign relations.

Commissioner Curtis in his address before the Senate committee in March last presented some very interesting statistics of our commerce with those countries from which I will quote the following:

South of the Rio Grande and the Gulf of Mexico, in what is known as Spanish America, are about 43,000,000 of people, engaged in a foreign commerce amounting to over $800,000,000 a year. This commerce is about equally divided between exports and imports. The exports consist exclusively of raw products, and always will; while the imports consist of manufactured merchandise. The Spanish-American people have no taste for mechanical industry, and lack the water-power or the fuel to exercise it if they had. They will always be compelled to import all the luxuries and nearly all of the necessaries of life except food, and their wealth must come from the boundless resources with which a prodigal nature has stored the continents.

In 1883 our exports were valued at $733,768,764, mostly manufactured merchandise. Of this amount we exported but $64,719,000 to Spanish America. Our annual mechanical and agricultural products are valued at $15,000,000,000, but we seldom have sold more than $75,000,000 worth of this product to our nearest neighbors, who buy in Europe many times as much as they ever get here.

The statistics given by Mr. Curtis include the European provinces, which are not embraced in those that I have furnished.

We have more trade with either Belgium, Italy, The Netherlands, Spain, Switzerland, Russia, China, Japan, Australia than we have with all of the Central American states combined. We have nearly as much trade with Greece as we have with Chili. We sell more sewing-machines in Switzerland than we sell in Chili, and Switzerland sells Chili more sewing-machines than she buys of us.

England, France, and Germany have secured a monopoly of the trade of Spanish America, by the establishment of quick, regular, and cheap transportation, and we have lost it by neglect. For example, Bolivia has a foreign trade of over $16,000,000 a year, yet the name of that country does not appear in the tables of our Bureau of Statistics. The chief imports of Bolivia are cotton and woolen goods, agricultural implements, mining machinery, hardware, cutlery, clocks, watches, canned goods, and provisions, a list which could be filled in any commercial city of the United States as cheaply as in Europe, and yet the annual reports of the Treasury Department do not show a dollar's worth of commerce between the United States and that country.

The same conditions exist with other nations in quite as startling a form.

* * * * * * *

During the last twenty years the value of the exports from the United States to the Spanish Americans was $442,048,975, and during that time we purchased of them raw products to the amount of $1,185,828,579, showing an excess of imports during the twenty years amounting to $765,992,219, which was paid in cash. It will thus be seen that our commerce with Central and South America has left a very large balance on the wrong side of the ledger, while those countries have all the time been buying in Europe the very merchandise we have for sale. Being the very reverse of the United States in climate and resources, they constitute our natural commercial allies, and the exchange should at least be even; but they sell their raw products here and buy their manufactured articles in Europe.

The principal reason for this is that the carrying trade is in the hands of Englishmen. The statistics show, that, of the total imports into the United States from Spanish America, which, in 1884, amounted to $159,000,000, three-fourths were carried in foreign vessels. Of our exports to those countries, amounting last year to $64,000,000, $46,000,000 were carried in American vessels, while only $18,000,000 were carried by foreign vessels. It will thus be seen that nearly everything we buy is brought to us from Spanish America by Englishmen, while nearly everything we sell we have to carry there ourselves. The logic of these facts is irresistible.

The most absurd spectacle in the commercial world is the trade we carry on with Brazil. We buy nearly all her raw products, while she spends the money we pay for them in England and France.

In 1884 of the exports of Brazil $50,266,000 went to the United States, $29,000,000 to England, and $24,000,000 to France. Of the imports of Brazil in 1884, $35,000,000 came from England, $15,000,000 from France, and $8,000,000 from the United States.

The greater part of our exports to Spanish America go to Mexico and the West Indies. Deducting these from the total, it will be found that we buy over 30 per cent. of what the South American countries have for sale, and furnish them only 6 per cent. of their imports. The balance of trade goes on piling up at the rate of nearly $100,000,000 a year.

* * * * * * *

The development of the southern half of South America is nearly as rapid as that of the United States. Immigration is flooding in, internal improvements are opening new and fertile fields, and wealth is increasing in a ratio enjoyed by no other section of the globe.

Chili, Uruguay, Paraguay, and the Argentine Republic, almost a *terra incognita* to us, are booming like our Western Territories. In 1876 the imports of the Argentine Republic were valued at $36,000,000; in 1884 they had reached $80,000,000. In 1876 the merchandise brought to that country from England, France, and Germany was valued at only $18,000,000, while in 1884 it was more than $53,000,000. The entire imports from the United States for twenty years were $6,000,000 less than those from the three commercial nations of Europe for the year 1884.

Within the last three months the Government of the Argentine Republic has made contracts for $59,000,000 worth of railway improvements, including a line of road northward into Bolivia, and two lines across the continent to Chili, so as to bring the commerce of the Pacific Slope into the harbor of Buenos Ayres, instead of taking it around the Straits of Magellan.

In 1874 the foreign commerce of Chili amounted to $42,000,000. In 1884 it reached $132,000,000. From $50,000,000 to $60,000,000 in merchandise is imported into Chili every year, of which England furnishes over $20,000,000, France over $12,000,000, Germany over $8,000,000, and the United States $3,000,000.

Adding the imports of Brazil to those of Uruguay, Chili, and the Argentine Republic, it will be found that the aggregate value of manufactured products introduced into those four countries annually reaches the enormous sum of $250,000,000, of which England furnishes nearly one-half, France about $50,000,000, Germany about $35,000,000, and the United States about $17,000,000.

We have no adequate conception of the present magnitude of these markets, nor of their prospective value. The manufacturers of the United States can supply almost every article represented in that $250,000,000, with the exception of a few articles of luxury which we ourselves import. The consumption of cotton goods alone amounts annually to over $65,000,000, and 95 per cent. is supplied by the mills of Manchester.

* * * * * * *

Even if the contemplated congress should fail to reach any conclusions upon the subjects proposed for it by Congress, a visit by the leading men of the Spanish-American nations to the United States will be productive of great good.

VIEWS OF THE PRESIDENTS AND PUBLIC MEN OF SOUTHERN REPUBLICS.

The commissioners have furnished us with the views of the presidents of some of the southern republics when this subject was presented to them. I will confine myself to a few brief quotations, which, however, are an index to the sentiments of the statesmen of the southern countries. In the conference with President Diaz, of Mexico, he said:

The Mexican Government was grateful to the United States for sending the commission to Mexico on such a mission, and said that he sympathized deeply and sincerely with the objects it had in view. No one could recognize more fully than he the fact that close commercial relations always resulted in political sympathy and permanent peace, and it was an act to be commended by the whole hemisphere for the United States, the mother of republics, to inaugurate a movement in which not only Mexico but all the republics of Spanish America would commend and join. The purpose of the commission, if accomplished, would, he believed, make peace permanent among all the nations of the western world, and bring to them a fruitful prosperity. Mexico and all the other republics had shown their faith in the political institutions of the United States by imitating its form of government, and still looked to it for encouragement and example.

* * * * * * *

He said he had always hoped such an international congress would be some time held, as he believed great good could be accomplished if all the American republics would consent to send delegates to meet upon an equal footing and agree upon measures for the common welfare.

The chief object to be discussed at such a gathering would naturally be a method of arbitration by which international differences could be peacefully adjusted: and another, equally important, was to confine American trade, so far as possible, to American nations.

The President of Venezuela was very cordial in his response:

I respond in the most frank and cordial manner to the expressions of good will of your Government, and I view the very elevated object of your mission from the standpoint of its great importance.

Venezuela and the United States have the same institutions, the same history. They produced the immortal George Washington, "the first in the hearts of his countrymen," and Venezuela produced the immortal Bolivar, the father of five republics, freed by the impulse of stupendous efforts. Both of them honored by the recognition of the two confederacies, they are to-day the faithful representatives of the association of our interests and aspirations—equality before the law and the truth of democracy.

With these lofty motives the people of the New World aspire by union to seek the development of their industrial and commercial prosperity and to cement the alliance of views and intents in the reign of equity and the empire of justice.

The President of Guatemala, in reply to the commission, said:

It is the source of the greatest gratification to me to receive from your hands the autograph letter by which his Excellency the President of the United States has accredited you as envoys extraordinary and ministers plenipotentiary to my government. From the very beginning we have embraced with the greatest ardor the plan of the American Congress to send a commission to the Spanish American republics for the purpose of securing more intimate and friendly relations between them all.

Such a noble and elevated purpose can not but have the sincerest sympathy and co-operation from all those who desire the progress of the several nations of the New World, so that in having the honor to receive you and give you a most affectionate welcome, it is gratifying to be able to assure you that you will find on the part of the Government and the people of Guatemala a sincere disposition to aid in the success of your most important mission.

The grand Republic of the United States is the natural market for the different products we export, and they should find in your rich and populous consumers who are able to send us in return the great variety of their agricultural and mechanical products with benefit to the producers and consumers of both countries.

Guatemala has always endeavored to maintain the greatest harmony with the nations which honor us with their friendship, and it has always endeavored very especially to strengthen more and more the cordial relations which have forever existed between this country and the United States, so that when you come, vested with an exalted duty by the grand American Government, inspired with the benevolent sentiments which you have just uttered, I have the honor to congratulate myself upon your arrival, and promise to leave nothing undone to make your visit a success, and enter into bonds with you to unite more closely two peoples which by their analogous institutions, by their geographical positions, and many other circumstances and considerations, should establish a more active and lucrative commerce.

* * * * * * *

Although Chili has seemed less friendly to us and more under the influence of England than any of the other southern countries, yet the president of that republic among other things said in reply to our commission:

The extraordinary progress of the United States, independent of the advantage gained by the extension of its area, of its geographical position, and the elements which constitute its social organization, is due to the liberal institutions under which the people are governed, and by which it has been proven

that the free people are those that really prosper, and are the only ones that have peace as the essential condition of material, intellectual, and moral progress.

The South American republics when they made themselves free had in the northern zone an authority they could consult and an example they could follow. If owing to reasons which are well understood they could not copy the edifice you have framed, they have always endeavored at least to inspire in their own people the ideas which have enabled you to advance so resolutely on the road of human liberty and progress. If on this road so happily trodden the American constellation has added to its stars, it is also true that the southern star, following with no less certainty in the same heavens, and pursuing the same purpose, shines to-day with greater splendor and shows that we have not been amiss in seeking the path to glory, liberty, and prosperity.

CENTENNIAL CELEBRATION AND WORLD'S EXPOSITION OF THE THREE AMERICAS.

As the question is now pending for Congressional action, it is proper that I should, before concluding my remarks, call attention to the inauguration of a movement by prominent citizens of Washington and Baltimore for the celebration at the national capital by the republics of America of the centennial anniversary of the adoption of the Constitution of the United States, in 1889, and the opening of a world's exposition in 1892, in honor of the four hundredth anniversary of the discovery of America by Columbus.

Those who have charge of this movement are gentlemen of high character, ability, and energy.

Movements of similar character have also been started in Saint Louis, Chicago, and New York as competitors for the location of this celebration and exposition. Without at this time discussing the question of location, I desire to express my gratification that such widespread interest is felt in the commemoration of events of such transcendent importance, which will no doubt result in bringing the peoples of America in closer friendship and commercial relations. No matter what location may be finally selected all patriotic Americans should join in seeing that these events are crowned with success surpassing any similar efforts of the kind in the history of the world.

Senator GORMAN, of Maryland, has introduced in the Senate a resolution in regard to the movement for the location at Washington, and he presented a memorial in support of this movement, which is signed by Hon. William B. Webb, of Washington, as chairman, and Mr. Alex. D. Anderson, as secretary; both are gentlemen of high character, fine abilities, and well qualified for the important and difficult duties of these positions.

I will quote the following extracts from the memorial, which are of general interest:

[Permanent Exposition of the Three Americas: To be located at the Capital of the United States. Constitutional Centennial Celebration in 1889 by the sixteen American Republics in honor of the one hundredth anniversary of the Constitution of the parent Republic, the United States. World's Exposition in 1892 in honor of the four hundredth anniversary of the discovery of America by Columbus.]

OFFICE OF THE BOARD OF PROMOTION,
Willard's Hotel, Washington, D. C., April 21, 1886.

To Congress:

In three years from the 4th of last March the Constitution of the United States will have completed the first century of its existence.

Six years from the 12th of next October will be the four hundredth anniversary of the discovery of America by Columbus.

These are great historical events of national, hemispherical, and world-wide importance, which should be celebrated in a manner becoming the dignity, wealth, and grandeur of the United States and of the three Americas. Pride, as well as self-interest, in the success and advancement of republican and American institutions require that all Americans unite in paying tribute to these anniversaries.

Your attention is therefore respectfully invited to some suggestions in regard to the ceremonies which it seems to us would be appropriate, and to a proposed permanent exposition which should remain as a lasting monument in honor of these events. They are simply suggestions thrown out to attract other suggestions and to stimulate discussion of a subject which is of transcendent political and practical importance to the whole western hemisphere.

To prevent any possible misunderstanding, it may be well to state, at the outset, that we, who are advocating the proposed celebrations and expositions at the national capital, desire that they be entirely under the auspices and control of the General Government. Both the magnitude and dignity of the project forbid its management by a private corporation.

The subject of an exposition in 1892 has already been carefully considered in several American cities besides Washington.

More than a year ago a committee of representative and progressive citizens was appointed in Saint Louis to take steps toward its acquisition for that metropolis of the Mississippi Valley. They secured the indorsement of a national convention of fair and exposition managers, and have, since then, kept the subject prominently before the press and public.

During the past four or five months Chicago, with its usual enterprise, has held several meetings to arrange for an exposition there in 1892, which movement is cordially indorsed by the press and public of that city.

During the past four months a promoting organization has been perfected in the City of Mexico, composed chiefly of members of the press, to capture the same exposition. They have already appealed to the general government of their republic, and an early and favorable response is expected.

A year ago a meeting of some two or three hundred Spaniards and Spanish Americans were held at Tammany Hall, New York city, to take preliminary steps toward a celebration in 1892 in honor of Columbus.

Recently the subject of a world's fair in New York, in honor of the centennial of the adoption of the Constitution of the United States, has been discussed in that city.

Recently, also, a bill was introduced in the United States Senate providing for a constitutional centennial celebration at Washington in 1889 by the sixteen American republics, in honor of the one hundredth anniversary of the Constitution of the parent Republic—the United States.

In brief, two points are already settled by public opinion: first, that these great historic events must be duly celebrated in some American city; and, second, that the exposition proposed in their honor should be the greatest the world ever witnessed.

Now, it is evident that great world's fairs can not be successfully held in four American cities at the same time. In this connection the mind naturally turns toward Washington, the capital of the United States—the capital of the leading nation of the three Americas—the Paris of America in attractions and beauty, and a city destined to be the Berlin of America in educational advantages. It is, therefore, a city upon which all others can unite—the truly representative city of the western hemisphere.

* * * * * * *

It would, in effect, be a permanent congress of the three Americas, something in harmony with the spirit of the times, as is evidenced by the numerous bills recently introduced in the Senate and House providing for a temporary convention of American nations.

For the first time in the four hundred years since their discovery by Columbus the three Americas are beginning to appreciate the transcendent importance of a more intimate acquaintance with each other. Both political parties in the United States are committed to this idea in their recent national platforms, and public sentiment demands the inauguration of an hemispherical policy based upon more intimate social and commercial relations between the various sister states of all the Americas.

* * * * * * *

But new markets for surplus manufactures are only a portion of the benefits which the United States will derive from the proposed exposition.

According to a recent and elaborate report to the State Department by one of our consuls abroad, citizens of the United States alone spend each year in Europe for travel pleasure, art, education, and similar purposes upward of $100,000,000. The Spanish-American republics and Brazil do the same thing on a smaller scale, but perhaps nearly as much in the aggregate. Why not make the art, educational, and other attractions and advantages of Washington such that a large portion of this enormous capital will be kept at home and European travel and capital attracted here? It can be done if the permanent exposition is carried out on the scale and in the manner proposed.

The capitals of most of the prominent European nations have had world's fairs; London in 1851, Dublin in 1853, London in 1862, Paris in 1867, London in 1871, Vienna in 1873, and Paris in 1878.

It is time the capital of the United States should profit by their example in this respect, and there is no time to lose if we are to have an exposition in 1889, 1892, and permanently thereafter.

It will require one year for the necessary legislation by Congress, at least another for legislation by the forty-six States and Territories and the various nations of the other Americas, leaving but one year before the centennial of the Constitution, and four years before the four hundredth anniversary of the discovery of America for the erection of permanent buildings, the collection of exhibits, and other necessary work.

It is evident, therefore, we can do but little more than inaugurate the enterprise in 1889, leaving the grand consummation for 1892.

No occasion could be more appropriate for such an inauguration than the 4th of March, 1889, the one hundredth birthday of the Constitution, and the date of the inauguration of the next President of the United States, in which celebration the presidents of the fifteen American sister republics, whose organic laws are, to a greater or less extent, copied from our Constitution, should be invited to participate.

When the exposition is complete, in 1892, the President of the United States, the presidents of the fifteen American sister republics, the Emperor of Brazil, the Governor-General of Canada, the King of Italy, where Columbus was born, and the Queen of Spain, from which country he sailed, should unite in unveiling a colossal statue of the illustrious discoverer of America, which statue should be located in the center of the permanent exposition grounds at Washington.

The first century of the Republic has been mainly devoted to home affairs, the formation and perfection of constitutional government, the material development of the great interior, the adjustment of sectional disputes, and the construction of transportation routes to the seaboard.

The time has now arrived when the United States is entering upon what may be termed the international era of its existence and a broader field of action.

We therefore respectfully submit that the proposed permanent exposition of the three Americas is in accord with the spirit of the times, and that it will exert an educational, industrial, commercial, and political influence of great practical importance and value.

Very respectfully,

WM. B. WEBB, *Chairman.*
ALEX. D. ANDERSON, *Secretary.*

COMMERCE OF THE SOUTHERN COUNTRIES.

I desire to present the following tables, as appendices—a revision of the tables presented to my former speech.

APPENDIX I.

Population of the capitals and principal seaports of Mexico and South America.

Capitals and seaports.	Year.	Population.
MEXICO.		
Mexico	1882	300,000
ARGENTINE REPUBLIC.		
Buenos Ayres	1882	295,000
BOLIVIA.		
La Paz	1880	26,000
Puerta de la Mar	1858	2,300
BRAZIL.		
Pará	(a)	20,000
Natal	(a)	10,000
Pernambuco	1883	130,000
Macayo	(a)	20,000
Bahia (San Salvador)	1883	140,000
Rio de Janeiro	1883	350,000
BRITISH GUIANA.		
Georgetown	1871	35,562
New Amsterdam	1871	5,437
CHILI.		
Santiago	1884	200,000
Valparaiso	1884	95,000
DUTCH GUIANA.		
Paramaribo	1881	27,416
ECUADOR.		
Guayaquil	1878	40,000

Population of the capitals and principal seaports, &c.—Continued.

Capitals and seaports.	Year.	Population.
FALKLAND ISLANDS.		
Stanley Harbor	1853	450
FRENCH GUIANA.		
Cayenne	1866	8,000
PARAGUAY.		
Asuncion	1879	22,000
PERU.		
Lima	1874	101,488
Callao	1871	40,000
Islay	1870	2,000
Arica	1871	5,000
Iquique	(a)	1,000
Payta	(a)	2,000
URUGUAY.		
Montevideo	1884	104,472
UNITED STATES OF COLOMBIA.		
Bogota	1881	100,000
Colon (Aspinwall)	(a)	12,000
Panama	1881	25,000
Cartagena	1872	25,000
VENEZUELA.		
Caracas (with suburbs)	1883	70,509
Cumana	1881	12,057
Puerto Cabello	1881	10,145
Maracaibo	1881	22,224
Barcelona	1873	7,647

(a) Not stated.

APPENDIX II.

Statement showing the area in square miles and the number of inhabitants of Mexico, Central America, and South America, compiled from the latest and most reliable sources.

Countries.	Year.	Area.	Population.
		Sq. miles.	
Mexico	1882	741,598	10,447,974
CENTRAL AMERICA.			
Guatemala	1885	41,830	1,284,604
Honduras	1881	47,090	351,700
San Salvador	1883	7,226	613,273
Nicaragua	1883	58,167	275,815
Costa Rica	1884	26,040	210,177
SOUTH AMERICA.			
Venezuela	1884	632,695	2,121,988
United States of Colombia	1881	504,773	4,000,000
Ecuador	1878	248,370	946,033
Peru	1878	503,380	3,374,000
Bolivia	1881	475,000	2,303,000
Chili	1884	182,790	2,415,621
Argentine Republic	1882	1,357,896	2,942,000
Uruguay	1883	73,538	520,536
Paraguay	1879	91,980	316,046
Brazil	1883	3,287,964	12,002,978
Falkland Islands	1881	6,500	1,583
		8,286,837	44,157,328

Shall the National Revenue be Derived from Protective Customs Duties or from Burdensome and Vexatious Internal Taxes?

SPEECH

OF

HON. WILLIAM D. KELLEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 3, 1886.

On the bill (H. R. 7052) to reduce tariff taxes and to modify the laws in relation to the collection of the revenue.

Mr. KELLEY said:

Mr. CHAIRMAN: I shall address my remarks to House bill No. 7652, which is known as the committee's substitute for the Morrison tariff bill. It is a posthumous offspring of the confederacy of insurgent States, the ascendency of whose spirit in this House and the administrative departments of our Government Jefferson Davis recently celebrated in the midst of displays of popular enthusiasm which elicited from him the significant exclamation, "You are confederates, and I love you for it."

Its birthmarks are too many and too well defined to permit a question as to its parentage; its vital impulse was received from section 8 of article 1 of the confederate constitution, which was substituted for section 8, Article I of the Constitution of the United States, and marks the point of extreme divergence between the two systems of fundamental law. Our Constitution had been adopted for the purpose of providing for the common defense and promoting the general welfare. To secure these supreme objects it specifically empowered Congress to lay and collect taxes, duties, imposts, and excises for the purpose of providing for the common defense and the general welfare. The cause of the rebellion reduced to its last analysis is found in the clauses of our Constitution which recognize the general welfare as an object of governmental care and solicitude. Hence it was that in the constitution of the insurgent confederacy was inserted this prohibition, "Nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry."

Sir, in submitting these remarks I am not entering the field of partisan political discussion or seeking to revive memories that are painful to me, and which since the close of the war I have fraternally and persistently labored to extinguish. No, sir; I am confining myself strictly to the consideration of the bill before the committee, every clause and proviso of which has, I believe, been prepared in rigorous obedience to the spirit, provisions, and restrictions of what posterity will know as the constitution of the Confederate States of America, and consequently have no adaptation to the existing condition of the industries of our country. Its promoters can not have been ignorant of the fact that if enacted into law its practical application of the doctrine of absolute free trade, though confined to but few commanding industries, will overthrow the general welfare, deprive labor of employment, close factories, forges, furnaces, rolling-mills, quarries, ore-banks, and coal mines in every part of the country, and render the labor and capital that have been expended in their creation or development unproductive; that it will aggravate a thousandfold the discontent now pervading the land and reduce to bankruptcy hosts of the men whose energy has during the last quarter of a century advanced our country to the foremost position in the family of nations and invested it with power to defy the world in arms. Its adoption would produce a panic that would paralyze trade as well as production. That it is the offspring of confederate sentiment, principle, and constitutional restriction is thoroughly understood in the South. It is this knowledge that elicits opposition to it from the men of hope and progress who expect to establish diversified industries in every one of the old Confederate States. My convictions on this subject are, therefore, not peculiar. They are entertained by native citizens of every Southern State. In the course of an open letter to the chairman of the executive committee of the Free Trade Association of South Carolina, written from this city on the 23d of April, Mr. TILLMAN, who, having served as a private in the confederate army from early in 1862 to the close of the war, and been a member of the Forty-sixth and part of the Forty-seventh Congresses and who now represents the second district of his State, said:

> Shall we of the Palmetto State always be self-idolatrous Bourbons, never forgetting, never learning anything? Was it not our intemperate zeal for free trade that led to nullification, and was it not as much to enjoy free trade as to protect slavery that South Carolina seceded in 1860?

The country knows that the preparation of the bill was the exclusive work of the political majority of the Committee of Ways and Means. I therefore reveal no secret of the committee-room when I say that the minority members of that committee were not permitted to participate in the deliberations which preceded its construction. The right to cast futile votes against its provisions, when, having been informally adopted by the majority, the bill was reported to the committee, could not be withheld from them and was therefore accorded. In thus applying the principle of the caucus to the work of a committee it is possible that some members of the majority of the committee were carried further than they intended or desired to go. Except in the administrative sections, which were presented to the House by the gentleman from New York [Mr. HEWITT] and, at his suggestion, referred to the committee as a separate bill, which was known as HEWITT's administrative bill, it nowhere bears the impress of that gentleman's often proclaimed convictions. He, as is known to all the world, believes that all coal and ores are raw materials and should be on the free-list; that scrap-iron, whether cast or wrought, including bar ends, is raw material, and should therefore be free; that nature's special solvent, alcohol, is a material in innumerable commodities as an ingredient or as an agent in the preparation thereof, and should, so far as it is thus consumed, be relieved from internal taxes; and that the American laborer is entitled to protective duties to the extent of the difference between the cost of labor in other lands and that paid in this country. No one who knows the earnestness with which the gentleman has enforced these convictions will suspect him of having promoted the adoption of this bill which leaves coal and ores and scrap-iron dutiable, and alcohol for the arts taxable; and instead of protecting the labor involved in the growing of hemp, flax, and wool, and the manufacture of salt and lumber, and in our fisheries, leaves it without even the incidental protection afforded by such duties as would be imposed by a tariff for revenue only.

Nor will those who are familiar with the tariff work of the chairman of the committee [Mr. MORRISON] be able to discover his purposes and handiwork in this bill, which is utterly inconsistent with and contradictory of the bill he presented to the House on the 15th of February. It was that bill that the country was assured would after some possible amendment be reported to the House for consideration. It was the bill to consider which hearings were appointed, to attend which hundreds of citizens came from their distant homes and were elaborately heard. The unheralded substitution of this bill, so unlike and so inconsistent with the one on which these parties had been heard, converted the hearings into expensive and derisive mockeries and subjected the committee to painful suggestions of bad faith. Though the five protectionist members of the committee are without weight in its councils, it is otherwise with the five who constitute the majority of its political majority. They demonstrated their omnipotence in its councils when they brushed aside the bill with which the name of the chairman was associated and on which hearings had been invited, and substituted one which embodies no provision that will not be satisfactory to the voters of their several districts and to the Bourbons of the Confederate States generally. Yes, sir, as a substitute for the Morrison bill we have one prepared, so far as it relates to customs duties, by five representatives of Confederate States, four of whom served faithfully in the confederate army, and to the fifth of whom the fact that he was so young that he could give but his sympathy to the cause for which his senior colleagues fought is a cross which he will doubtless bear through life.

Nay, Mr. Chairman, I have fallen into an error; there are but four members of the committee who were citizens of Confederate States when the insurgents fired on the Union flag, but the fourth member, who served as a confederate soldier, fearing that his State might not secede, abandoned her, and made war upon his country and his State in support of the confederate free-trade constitution and the pervading belief of the people of the slave States that "commerce and the mechanic arts and the banking system were incompatible with the social safety of the slave States;" * * * "that great cities were great sores, aggregations of people an evil, immigrant numbers and capital not desirable, and works of internal commerce only to be allowed where they were to be built at the private cost of those who used them," and "that our ships and workshops should be stationed beyond the Atlantic."

Mr. Chairman, in these remarks I mean offense to none of the gentlemen alluded to. My experience as a member of the Committee of Ways and Means has been exceptionally protracted, and I can truly say that in this long experience I have met no more agreeable companions on that committee than the five gentlemen whose supreme relation to revenue measures I feel constrained to criticise and condemn. There is not among them one whose uniform courtesy and frankness has not secured him my admiration or whose friendship I do not desire to enjoy. For the present, however, it is my duty to ascertain if I can why the power that organized this House and its committees bestowed on them the power to shape our revenue measures and to report for consideration a bill which, if enacted into law, will annually curtail until it shall have ultimately destroyed the national revenues by depriving the producing classes of the people of the power to pay for and consume dutiable or taxable commodities, whether domestic or imported. After diligent investigation and patient consideration I have been unable to discover any other reason for their appointment to the Committee of Ways and Means than the known devotion of each of them to economic dogmas the attempt to give constitutional sanction to which invoked the war for the Union and all its bloody consequences. I appreciate the gravity of this conclusion, and in its support beg leave to submit a few of the many facts which have compelled me to accept it.

STARTLING INDUSTRIAL CONTRASTS.

By the census of 1880 it was found that we had 253,852 manufacturing establishments, which employed $2,790,272,606 capital and 2,738,-

695 operatives. Let me ask what percentage of these totals is represented by the gentlemen from Arkansas, Texas, Tennessee, Georgia, and Kentucky who are members of the Committee of Ways and Means? Is it such as to raise a presumption that they have practical knowledge of the just requirements of the interests of these millions of laborers and of the proprietors of these hundreds of thousands of establishments, who are the managers of these billions of capital whether it is owned by them or by banks, saving institutions, trust companies, or individuals whose business is to loan capital to men of known energy and integrity? On this point the following statements, taken from the tables of the last census, will shed some light:

Congressional districts.	Establishments.	Capital.	Operatives.
Total United States	253,852	$2,790,272,606	2,738,895
Arkansas, second district	.....	466,765	670
Texas, ninth district	.....	552,837	867
Tennessee, fourth district	.....	734,464	1,013
Georgia, fourth district	.....	3,581,386	3,850
Kentucky, seventh district	.....	3,755,107	2,302
Total	.....	9,090,559	8,702
Per cent. of the aggregate of the five districts to total aggregate of the United States	.....	.0032	.0031

Mr. Chairman, can it be that the combined districts represented by five members of the Committee on Ways and Means employ in all their workshops less than one-third of 1 per cent. of the capital involved in the diversified manufactures of the country, and that they employ a still smaller percentage of one-third of 1 per cent. of the number of laborers engaged therein? Have not the figures played tricks upon me? The conclusion that legislation touching the nation's revenues and the industries, wages, and estates of millions of the people has been confided to the Representatives of five such undeveloped districts seems so utterly absurd that I fear to rest in it. Let me therefore apply another test. There are three hundred and twenty-five Congressional districts. Dividing the national totals by that number we find what, by a common average, should be the amount of capital and the number of operatives employed in each district. This gives to a single district $8,585,454 of capital, and 8,427 of laborers. It thus appears that if the combined districts whose Representatives have fashioned this bill for the government of our industries had their average proportion of the grand totals their capital would be not as it is, $9,090,559, but $42,927,270; and their operatives would number not as they do, 8,702, but 42,136, or very nearly five times each number. Is not this exhibit a sad one; and is it not sadly confirmatory of the figures that show that five members of the Committee on Ways and Means, who determine the conclusions on tariff and tax questions, represent less than one-third of 1 per cent. of the capital and less than one-third of 1 per cent. of the laborers employed in the manufacturing industries of our country and that the average for each district is less than one-fifteenth of 1 per cent. of both capital and labor.

But, hoping we may still be mistaken, let us apply another test. The city I in part represent is composed of five Congressional districts. The reply of the census to the question, how do the Philadelphia districts compare with those of the five gentlemen who as members of the Committee of Ways and Means determined the character of this bill, will be significant. The workshops of the five Philadelphia districts employ $187,148,359 capital and 185,527 operatives. It will, therefore, be seen that these favored districts employ only 4.8 per cent. of the capital and 4.7 per cent. of the number of laborers employed by the same number of districts in Philadelphia.

Sir, the country has the right to know by what economic law it is that the identical number of districts embraced in Philadelphia, and which employ in manufacturing industries that are affected by the tariff less than 5 per cent. of the capital and labor she employs, were in the organization of the House given the power to fashion laws which may work the prosperity or the ruin of her manufacturers and laborers and those of the country at large. But in selecting Philadelphia for this comparison I am invidious, for here are the names of eighteen cities, but one of which embraces more than five Congressional districts, and the population of each of the last named six of which is less than is required to constitute a district, but each of which employs more capital and more laborers in manufacturing industries than do the second district of Arkansas, the ninth of Texas, the fourth of Tennessee, the fourth of Georgia, and the seventh of Kentucky combined. Why, sir, in the name of the country I ask, have these undeveloped districts a preponderating voice in the Committee of Ways and Means?

These are the names of the sixteen cities alluded to the manufacturing power of each of which exceeds that of the combined districts of five members of the Ways and Means Committee: Philadelphia, New York, Chicago, Brooklyn, Pittsburgh, Saint Louis, Cincinnati, Boston, Baltimore, San Francisco, Providence, Buffalo, Newark, Louisville, Cleveland, and Milwaukee. In view of these facts am I not justified in charging upon the Democratic caucus which organized this House a deliberate assault upon the vested rights and interests of the laboring classes of our country? It may be whispered that this combination was not deliberate; that the selection of the representatives of these non-manufacturing districts was accidental. Sir, this will be an afterthought; the free-traders boasted of their triumph in the organization of the House, and this blow at the manufacturing interests of the country is a legitimate result of their triumph. Such elaborate and complex coincidences are not within the range of the doctrine of chance. No set of tables ever recognized as authority by insurance companies or companies for the granting of annuities fails to show that they are outside of the doctrine of chance and must be accepted as the result of deliberation and design.

THE BILL IS HOSTILE TO SOUTHERN PROGRESS.

Having viewed and reviewed the facts involved I am constrained to declare again, and with emphasis, that the bill is the legitimate offspring of the economic faith held by the people of the insurgent States, and which was embodied in the constitution of the confederacy that assumed the title of the Confederate States of America. Let it not be said that the utterance of this conviction is an expression of hostility to the South, or that I am fanning the flame of sectional strife and hatred, for such is not the fact. I am striving to bring to the attention of my countrymen, South and North, facts which can not be gainsaid, and which are full of significance and of special import to every Southern owner of a coal-mine or a deposit of copper, zinc, nickel, lead, tin, antimony, manganese, emery, corundum, plumbago, chrome, kaolin, gypsum, or other metallic or mineral substance; of a furnace, forge, rolling-mill, or steel works; of a manufacture of textiles, whether of cotton, flax, hemp, wool, or silk; of chemical works, or any other form of manufacturing industry.

Nor are these invidious facts less significant to the farmers of the South who own hemp or flax fields or whose acres may be enhanced in value by the creation near them of industrial centers like Roanoke, Va., Chattanooga, Tenn., or Birmingham or Anniston, Ala., the inhabitants of which will enable them to produce successive crops of fruit and spring vegetables, furnish a neighboring market for poultry and eggs, veal and lamb, and save them from the overwhelming Asiatic competition which the farmer who depends on the export of cereal crops must now endure.

Sir, I do not assail the people of the South. It is to the people of the new South that I specially address myself. The facts I expose demand their consideration, and should convince them that an attempt is being made to again subject them to the ruthless domination of men of their own section whom they describe as incapable of either forgetting or learning anything. To the hopeful and aspiring men of the South I appeal in their own behalf and that of the country at large. It belongs to them to see to it that in future organizations of this House care shall be taken that in the room of the committee to which all questions of revenue are submitted the voice of the present and the future of the South, as well as that of its past, may be heard. Sir, when this consummation shall be achieved and the people of the South shall have engaged in the development of her vast and infinitely diversified resources, the utilization of her incalculable water-power and the commercial capacity of her noble streams the flow of which is never impeded by the icy breath of winter, the construction of factories in the midst of her cotton-fields, the conversion of her timber into better homes for her planters and laborers than they have ever known, and into furniture characterized by broader utilities and forms of higher beauty than they have ever enjoyed, and when instead of laboring for wages in cotton-fields and on rice plantations owners of small farms will find wealth in furnishing flowers, fruits, spring vegetables, young poultry, and meats for the markets of the North and Northwest there will spring up in her midst divers and beneficent industries of which her soil and climate and multifarious resources should have made her the native home. And then that beautiful section of our country, which one of its statesmen is reported to have said would grow no grass and consequently could raise no wool, will lead other sections of the country not only in mining and manufacturing, but in the abounding products of a carefully tended sheep husbandry that will rival in affluence that of the sunny fields of Australia.

Sir, my poor attempt at portraying the future wealth and greatness of the States that were sought to be doomed to the poverty of Turkey, Egypt, and British India by the establishment of a confederacy whose aid for the development of the material resources of its people should be forever withheld, is not the vision of an enthusiast, nor like the one the poet tells us filled the mind of Columbus as he beheld the outlying fields of the richer continent he was about to give to the world. It has well-known facts for its basis. If properly protected by customs duties against foreign competition in the years of the infancy of their industries the genius, energy, experience, and capital of the North and of foreign lands will flow in to extend and perfect what has been so well begun by her own people under the protective tariffs that have prevailed since the close of the war. I can not indicate the extent of the work they have accomplished, though I am a diligent student of this paper, the Manufacturers' Record, a weekly record of the progress of Southern Industry, published at Baltimore. From its issues of April 24 and July 10 I submit the following statement of what was done in

developing the manufacturing interests of the South in the first six months of the current year:

The industrial growth of the South moves steadily on. With the gradual recovery of all manufacturing interests from the late severe depression, more activity is noticeable in the organization of new enterprises. The first three months of 1886 have witnessed a very gratifying development of the manufacturing and mining interests of the whole South. Never before has the outlook been more promising than at present for the steady, permanent growth of the industrial interests of that section.

As heretofore, the growth of manufactures is not confined to a few industries, but extends over almost the whole range of human industry, embracing pig-iron furnaces, foundries, machine-shops, steel-works, cotton and woolen mills, cotton-seed oil mills, cotton compresses, fruit-canning factories, carriage and wagon factories, agricultural-implement factories, flour-mills, grist-mills, saw-mills, planing-mills, sash, door, and blind factories, shuttle factories, handle and spoke factories, barrel factories, shingle-mills, furniture factories, tobacco factories, brick-yards, ice factories, fertilizer factories, stove foundries, wire-fence factories, lime-works, soap factories, tanneries, glass-works, gas-works, whiting factories, distilleries, potteries, electric-light works, marble and slate quarrying companies, and companies to mine coal, iron ore, gold, silver, mica, natural gas, oil, &c. It is a healthy growth. Along the whole line of industry there is activity and great progress.

Basing our calculations upon returns received directly by the Manufacturers' Record, amply authenticated and verified, and in the case of incorporated companies compared with the official reports of the State officers, we find that during the first three months of 1886 the amount of capital, including capital stock of incorporated companies, represented by the new manufacturing and mining enterprises organized or chartered at the South, and in the enlargement of old plants and rebuilding of mills after being destroyed by fire, aggregates about $36,557,200.

This remarkable increase was not sporadic, but indicative of a steadily augmenting rate of progress. In its issue of July 10, the Record further says:

In the development of its manufacturing and mining interests the South moves continually on, each day adding to the number of the productive establishments that give employment to labor, increase the home consumption of farm products, enlarge the aggregate value of the annual output of manufactured goods, and help on the general prosperity not only of the entire South, but of the whole country. The record of progress is nothing less than marvelous.

Summing up the amount of capital and capital stock represented by our list of new enterprises, the enlargement of old plants and the rebuilding of mills after being burned, for the first six months of 1886, and comparing it with the figures for the corresponding time of 1885, we have:

States.	First six months of—	
	1886.	1885.
Alabama	$4,808,500	$3,580,000
Arkansas	11,428,000	375,000
Florida	981,000	479,000
Georgia	1,399,000	1,580,000
Kentucky	17,220,700	10,621,000
Louisiana	1,202,000	1,407,000
Maryland	5,139,000	4,633,000
Mississippi	457,000	416,000
North Carolina	1,485,200	1,535,000
South Carolina	538,000	427,000
Tennessee	5,297,000	1,802,000
Texas	2,986,000	1,319,000
Virginia	5,553,000	2,008,000
West Virginia	5,123,800	6,352,000
Total	63,618,200	36,534,000

These figures show an increase for the first six months of 1886 over the same time 1885 of $27,000,000 in capital and capital stock. The industrial activity in the South during the last six months, as indicated by these statistics, has been far greater than during the corresponding period last year.

FACTITIOUS DEMAND FOR FREE RAW MATERIALS.

The substitution of the bill under consideration for the Morrison bill which the committee had so long had under consideration, though a surprise to everybody but its authors, was not arbitrary. There was a reason if not an absolute necessity for the abandonment of that bill. For years the country has rung with a factitious demand for free raw materials, and the majority members of the committee had doubtless assured their constituents of their purpose to relieve them from oppressive taxation by the repeal of the onerous duties imposed by the existing tariff on raw materials. Sir, however learned these gentlemen may be in obsolete theories of political economy, they discovered when brought to the test of action that of the state of facts touching the question of duties on raw materials they had been ignorant; and when as a committee they undertook to designate the raw materials from which it was their purpose to remit duties they could not find them in any of the schedules of the tariff.

The Morrison bill proposed to enlarge the free-list by putting on it all ores, whether of copper, lead, iron, or other useful metals, mineral substances in a crude state, and unwrought metals not specially enumerated or provided for in the bill, together with all kinds of coal and coke. These are but a small part of the advanced articles it recognized as raw materials. The list is too long for recapitulation, as it filled seventy-four lines of the bill. The majority of the chairman's adherents on the committee were ready not only to accept his list but to enlarge it. But circumstances forced them to abandon this purpose.

The expediency of secret action by the committee which had been contemplated came to be doubted, and more than a fortnight was dedicated to the hearing of parties whose interests were affected by the provisions of the bill. This change of policy enabled the country to understand something of what was going on in the committee-room, and to raise the question, what commodities are raw, and should therefore be on the free-list. This was fatal to the bill. Declared free-traders from South Carolina, Georgia, and Louisiana hastened to convince the committee that neither rice nor sugar were strictly raw. The coal, ore, and iron producers of Virginia protested, in their several sections of the State, so vehemently as to constrain the house of delegates and the senate of that free-trade State to adopt identical resolutions informing the Committee of Ways and Means and the two Houses of Congress that in their opinion and that of the people of Virginia coal and ore when ready for the market or for use in the furnace or forge are not raw materials, but advanced commodities, the preparation of which is among the most fruitful sources of employment for the laboring people of that State, and that the labor and capital embarked in their production should therefore be protected by adequate duties. These legislative resolutions were presented to the committee and enforced by a large and intelligent deputation of citizens whose interests were involved. Nor were South Carolina, Virginia, Georgia, and Louisiana the only Democratic free-trade strongholds from which protests came. From enterprising and energetic men of Tennessee and Alabama came remonstrances, some against particular provisions and others against the general scope of the bill. However determined the majority of the committee were to disregard the appeals of Northern workmen or their employers, they could not resist the persuasive influence of the owners of rice and sugar plantations and Southern coal-mines and ore-beds.

The controlling members of the committee were, however, equal to the emergency. As they could not find in any of the dutiable lists materials that had not been advanced by labor, they treated as raw such manufactured articles as timber in all its elementary forms; salt, whether in bulk, bags, sacks, barrels, or other packages; the products of our fisheries, whether mackerel, herring, salmon, or other fish, fresh, smoked, dried, salted, pickled, or preserved, except anchovies or sardines, or other fish preserved in oil; all wools, whether on the skin, clipped, unwashed, washed or scoured, and hair of the alpaca, goat, and other like animals, and all base substitutes for wool, including rags, shoddy, mungo, waste, and flocks; and flax and hemp, and all substitutes for these fibers. None of these articles are raw. Lexicographers tell us that that is raw which has not been cooked; that raw material is material not cooked; crude, unmanufactured; or that which has not been prepared or treated by any process of art or manufacture.

Accepting any of these definitions, and the term raw material excludes from the free-list of a tariff which proposes to afford any degree of protection to labor all the articles embraced in this bill. Timber in all the forms included in the bill is material advanced by labor; brine is the raw material of salt, and to speak of salt in bulk, and especially of salt in manufactured bags, sacks, barrels, and other packages, as raw is a misnomer that might pass for a genuine Irish bull; to call the catch of our hardy fishermen raw when smoked, dried, pickled, or preserved is to contradict every lexicographer that ever gave a definition to that word; and the terms of the bill show that its authors do not regard wool as a raw material, for it is to be free, if washed or scoured. These terms "washed and scoured" indicate no process of natural growth, but the preparation and treatment by a costly process of art or manufacture of a carefully produced commodity.

Again, in providing for the destruction of the value of our flax and hemp fields by making flax and hemp and all substitutes therefor free, the language of the bill proves that the gentlemen have not proposed to confine themselves to raw material, for they provide for the abolition of all duties on either hackled flax or flax known as "dress line." And though jute, jute butts, sunn, and sisal grass, and other vegetable substitutes for flax and hemp, which we import, may be regarded as raw material, they are now dutiable in order to protect the growers of flax and hemp and thus promote the diversification of our agricultural productions.

Mr. Chairman, the demand for free raw materials was full of significance when I dedicated myself to the repeal of all duties thereon, the abolition of internal taxes, and the establishment of a truly protective system with such rates of duties and such harmonious provisions as would make it effective in promoting the development of our unparalleled resources, and in securing to labor and skill such rewards as they were justly entitled to. The demand was, I repeat, then full of significance, but for more than fourteen years, or since 1872, it has been as unmeaning as the cry of a gorged parrot, that "Polly wants a cracker." It is more than twenty years since I raised a cry for free raw materials, which I continued to press in this House and before the country until my demand was fully complied with. When addressing the Committee of the Whole on the 31st of January, 1866, I thus outlined my policy in this behalf:

The principal of the debt must be paid; but as it was contracted for posterity its extinguishment should not impoverish those who sustained the burdens of the war. I am not anxious to reduce the total of our debt, and would, in this respect, follow the example of England, and as its amount has been fixed would not for the present trouble myself about its aggregate except to prevent its increase. My anxiety is that the taxes it involves shall be as little oppressive as possible and be so adjusted that while defending our industry against foreign assault they may add nothing to the cost of those necessaries of life which we can not produce and for which we must therefore look to other lands. The raw

materials entering our manufactures, which we are yet unable to produce, but on which we unwisely impose duties, I would put into the free-list with tea, coffee, and other such purely foreign essentials of life, and would impose duties on commodities that compete with American productions, so as to protect every feeble or infant branch of industry and quicken those that are robust. I would thus cheapen the elements of life and enable those whose capital is embarked in any branch of production to offer such wages to the skilled workmen of all lands as would steadily and rapidly increase our numbers; and, as is always the case in the neighborhood of growing cities or towns of considerable extent, increase the returns for farm labor. This policy would open new mines and quarries, build new furnaces, forges, and factories, and rapidly increase the taxable property and taxable inhabitants of the country.

Would the South accept this theory and enter heartily upon its execution she would pay more than now seems her share of the debt and feel herself blessed in the ability to do it. Her climate is more genial than ours; her soil may be restored to its original fertility; her rivers are broad and her harbors good; and above all, hers is the monopoly of the fields for rice, cane, sugar, and cotton.

In the fiscal year which ended June 30, 1866, during which these remarks were made, our receipts from internal taxes amounted to $310,906,984 and exceeded by $16,936,320 the receipts during the last fiscal year from both customs and internal taxes.

The account stands thus:

From internal taxes, 1866		$310,903,984
From internal taxes, 1885	$112,498,725	
From customs, 1885	181,471,939	
		293,970,664
		16,336,320

The principle underlying this policy was not original with me. My faith in the doctrine of free trade, of which I had been a disciple, had been shaken by the logic of Dean Swift, who, when appealing to the Irish people in their own behalf in 1727, had said:

> One cause of a country's thriving is the industry of the people in working up all their native commodities to the last; another, the convenience of safe ports and havens to carry out their goods as much manufactured and bring those of others as little manufactured as the nature of mutual commerce will allow; another, the disposition of the people of the country to wear their own manufactures and import as little clothing, furniture, food, or drink as they can conveniently live without.

I think, sir, that I may entitle myself to the gratitude of some gentlemen on this floor, especially of some of my associates in the committee-room, by informing them of the circumstances under which the change they are now so vehemently demanding was effected so long ago. Under instructions from the House the Committee on Ways Means, immediately after the adjournment of the session of 1868–'69, proceeded to California, Oregon, and Washington Territory to inquire into the workings of our revenue system upon the Pacific coast. As a member of that committee I participated in the investigations held at San Francisco, Portland, and the ports of entry of Washington Territory. After our return from that coast we made extended investigations in New York, Boston, and Philadelphia. Everywhere the wisdom of Dean Swift's inculcations upon the Irish people was demonstrated, as was the absurdity of collecting duties on articles which we could not produce and which entered as material into our manufactures or were required as food by our farmers, artisans, and laborers, such as tea, coffee, and spices.

When, therefore, the work of the committee had closed I determined to inquire into the best means of so extending the free-list as to relieve from duty all food and materials for manufacture which in itself or an adequate substitute could not be produced in our country. To this work I unremittingly devoted the leisure of the autumn months of 1869, of the years 1870 and 1871, and the greater portion of 1872, and in furtherance of my object corresponded with numbers of citizens of every part of the country. For several months my study presented the aspect of a Congressional committee-room, and the information I received was carefully collated. For several weeks during the autumn months of 1869 and the spring of 1870 certain evenings of each week were devoted to the work, on which occasions I had the invaluable assistance of leading chemists, textile and metal workers of the country, among whom were William Weightman and Charles Lennig, who were present at every such meeting. Mr. Weightman was attended by a stenographer, who recorded the conclusions at which the self-constituted commission of one arrived; and also undertook to have these conclusions printed in such form as to show the committees of the House and Senate what articles could be placed on the free-list with the least detriment to the revenues and the greatest benefit to our producing classes and national industries; what articles which yielded large amounts of revenue, such as argols, chalk, and spices, if it were doubtful whether the Government could safely part with all the revenue derived therefrom, should be scheduled under reduced duties; and what reductions should be made in the duties on commodities manufactured from materials from which duty had been entirely or in large degree removed so as to secure to the consumer the benefits to result from the proposed liberation of materials.

I am sometimes accused by imaginative gentlemen of the free-trade school, "friends of revenue reform or of tariff revision"—as they delight to call themselves—of desiring to prohibit international trade by building a Chinese wall around our country. To illustrate the intense ignorance of the recent industrial and financial history of their country of my accusers, and to invite their attention to some of the results of my labors to promote international trade by methods which would also stimulate domestic production, I cite a few facts from the Statistical Abstract for 1885. The results of my labors in this behalf were chiefly embodied in the acts of July 14, 1870, and of May 1 and June 6, 1872. They will be perceived by comparing the amount of goods imported and the proportions which were free and dutiable during the five fiscal years immediately preceding 1872 with those of the five years following that year, the figures for which I omit, as they were partially affected by the provisions of the new law.

Comparative statement of imports of free goods only during the five years preceding and those succeeding the passage of the tariffs of May 1 and June 6, 1872.

1867	$23,133,495	1873	$144,815,884
1868	15,190,781	1874	151,481,762
1869	21,646,692	1875	146,279,927
1870	20,140,786	1876	140,361,913
1871	36,587,737	1877	140,788,452
Total	116,699,491	Total	723,727,938

It should be noted that the amount for 1871 was materially increased by the act of 1870, and that the second of these periods was so largely influenced by a special cause as to seriously affect the trade of the country and the significance of its commercial statistics. It was during the years embraced in this statement that Germany and the United States were pursuing the quixotic attempt to demonetize silver, whereby they covered our land with bankruptcy among manufacturers and discontent among the laboring classes, and consequently curtailed our importation of goods, whether free or dutiable.

In order, therefore, to present a more perfect illustration of the extent to which the protectionist Congress of 1872 stimulated our foreign trade by remitting duties on raw materials and increasing them on such articles of home manufacture as needed increased defense, I present a statement of the free and dutiable importations of the five years from 1881 to 1885, inclusive, together with a statement of both free and dutiable goods imported during the terms above referred to:

Imports in—	Free.	Dutiable.
1867	$23,133,495	$372,627,601
1868	15,190,781	342,245,659
1869	21,646,692	395,859,687
1870	20,140,786	415,817,622
1871	36,587,737	483,635,947
Total	116,699,491	2,010,186,516
1873	144,815,884	497,320,326
1874	151,481,762	415,924,580
1875	146,279,927	396,725,509
1876	140,361,913	320,379,277
1877	140,788,452	310,534,674
Total	723,727,938	1,930,884,366
1881	202,491,547	440,173,081
1882	201,579,007	514,060,567
1883	207,504,718	515,676,196
1884	209,884,184	457,813,509
1885	193,213,624	384,313,705
Total	1,014,673,080	2,312,037,058

An examination of these figures will show that our total imports from 1867 to 1871 inclusive averaged $425,377,201, of which free goods averaged but $23,339,898; that from 1873 to 1877 inclusive the total annual imports averaged $530,922,460, an increase of $105,545,259 per annum, of which the annual average of free goods was $144,745,587, and that though the free goods showed an increase of more than $120,000,000 per annum, or more than 500 per cent., the importation of dutiable goods had fallen off less than $16,000,000 per annum, and this in a period of almost unparalleled commercial depression.

But with 1881 business revived, and the third of the above statements shows that from that year to 1885 inclusive the total importations averaged $665,342,027; and that though the free goods averaged $202,934,616, or an advance of nearly a thousand per cent. on the average of the first period, the dutiable goods largely exceeded the average of either of the other periods, having amounted to $462,407,411 as against $402,037,303 of such goods from 1867 to 1871, when the average of free goods was but $23,339,898, or, in other words, the dutiable goods alone exceeded both free and dutiable.

MISSTATEMENTS OF THE MAJORITY OF THE COMMITTEE.

Familiarity with and a respectful consideration of such facts as these would have prevented the majority of the committee from making such misleading statements as are found in the opening sentences of its report. The passage I refer to reads as follows:

> The rate of duty or tax on imported goods subject to duty is as low as 5 on some and higher than 200 per cent. on others. The average rate for the fiscal year 1885 a little exceeded 47 per cent., or $47 of tax on $100 worth of imported goods. This is the highest rate paid in any year since 1868, and above the average rate of the war period from 1862 to 1868.

These statements are thoroughly misleading, and show how easy it is to make figures force false conclusions. Such statements are, as I will presently show, a very familiar portion of the sophistical methods

of free-traders. Continued controversy has made me acquainted with them. It is true that there are quite a number of duties that exceed 100 per cent. and some which exceed 200 per cent., and the uninstructed reader of this portion of the majority report would naturally infer that these high duties were imposed for the benefit of manufacturers, or as protective duties, while the truth is that they were imposed and are retained as a means of protecting the Government's interest in the internal tax on alcohol, which is at the rate of $1.78 a gallon. Thus the duty on bay rum is nearly 150 per cent., and if it were reduced spirits would be imported under that name and the public revenue be defrauded of the tax on alcohol. On Chinese fire-crackers, the fruitful cause of conflagrations and other accidents, the duty is 100 per cent.; but it protects no American manufacturer.

There is a line of articles on which the duty is 286 per cent., but this duty is protective only of the Government's receipts from internal revenue, being on compounds or preparations in which distilled spirits are a component part of chief value. But worse than that, here are duties one of which is more than 358½ per cent., and the other 322.84 per cent. They, however, do not protect any manufacturer of blankets or clothing, or iron or glass. No. They protect the Government's internal revenue. The former is on spirits distilled from grain and is $2 per proof gallon, and the latter on spirits distilled from other materials upon which it is also $2 per gallon. Here, too, is a duty of 100 per cent. on playing-cards, and here again is one on cleaned rice which is more than 106 per cent. and is a purely protective duty, but one with which I would not interfere, as rice-growing is one of the reviving industries of the new South. Producers of rice confidently assert that without protection they must abandon their plantations. Should not common fairness have induced the majority of the committee, in reporting the reasons which led to the adoption of such a bill, to frankly state that none of the duties of 200 per cent. and more are, so far as manufacturing interests are concerned, protective?

Again, we have this assertion: "The average rate for the year 1885 a little exceeded 47 per cent., or $47 of tax on $100 worth of imported goods. This, says the report, is the highest rate paid in any year since 1868, and above the average rate of the war period from 1862 to 1868."

If the reader of this report is keen enough to detect the fact that by the use of the words "subject to duty" in a period disconnected from this passage he may perceive the truth; but if he fail to carry the significance of those three words into these sentences with which they seem to be disconnected he will be grossly deceived by the statement.

I have just shown that nearly one-third of the goods imported since the success of my labors in extending the free-list of 1872 have been free of duty. Yet the majority report takes no heed of that fact. I affirm, and the Treasury statistics sustain my affirmation, that upon the imports received during the year 1884-'85 the average rate of duty did not, as this report intimates, exceed 47 per cent., was not $47 of tax on $100 of goods imported. If it had been so, inasmuch as the tariff rates have none of them been changed since 1883, the fact that the same duties involve a higher percentage now than they had done in the three years last past would simply prove that goods are cheaper now than they had been, and that therefore the same rate of duty made a higher per cent. on their foreign value. The truth is that during the last fiscal year we imported $579,580,053 worth, on which, including the enormous duties imposed for the protection of the Government's revenues from distilled spirits, the duties averaged 30.59 per cent., being but $30.59 on every $100 worth of imported goods, and showing an exaggeration of nearly $17 to the $100 in the report of the majority of the committee as it is doubtless accepted by readers generally. In support of my remark that such plausible misrepresentations are not a new device of free-traders, I cite the following from my remarks of the 25th of March, 1870, in support of the then pending tariff bill:

> Why not maintain the existing tariff, and wherein does the bill submitted by the Committee of Ways and Means differ from it? Several gentlemen have propounded these questions, and I now propose to answer them briefly and rapidly. The existing law is crude, and contains many incongruous provisions. It is not in accord with the theory of the free-trader or the protectionist. It imposes the heaviest duties on articles of common consumption that we can not produce. Thus, on chalk, not an inch of which has, so far as I have heard, been discovered in our country, it imposes a duty of 833⅓ per cent. This onerous duty is not protective. We have no chalk-fields, and produce no substitute for it. It is, therefore, simply a tax, and one that everybody feels; the boy at his game of marbles, or before the blackboard in school; the housewife when she cleans her silver or britannia-ware, and the farmer in the cost of putty for his windows. The new bill puts chalk in the free-list.
>
> * * * * * * *
>
> I desire to call attention to the unfairness, unintentional of course, of the statement of the gentleman from New York [Mr. Brooks] that the existing tariff gives protection equal to an average of 41.2 per cent. That is the percentage of duties on the aggregate of our imports, and he will hardly claim that the duty of over 833 per cent. on chalk is protective of any of our industries.
>
> Again, we collect a duty of 300 per cent. on pepper. Why should black pepper pay 300 per cent.? Do we grow it anywhere in this country? Is this duty protective of any of our industries? You pay 5 cents a pound for pepper, and the tariff imposes a duty of 15 cents gold, equal to 300 per cent., and the gentleman includes this in his average of protective duties. Do we grow cloves or clove-stems in any part of the country? Is the duty on them protective? It is on cloves 355 per cent. and on clove-stems 386 per cent., and yet the gentleman also includes these with his protective duties.
>
> I will allude to a few more. On cayenne pepper, the duty is 308 per cent.; on allspice, 376½ per cent.; on nutmegs, 188½ per cent.; on crude camphor, 113 per cent.; on saltpeter, 77½ per cent.; on varnish-gums, none of which are produced in this country, 80 per cent.; on tea, the laborer's refreshing drink, 78½ per cent.; on coffee, 47½ per cent. I could largely extend this list of duties, each of which is a tax on some article of common consumption not produced in the country, and to that extent a bonus to our competitors. I am in favor of making all such articles free, and the committee has reduced the duties on them or put them on the free-list. When this shall be done, the gentleman from New York can calculate the percentage and find that our duties will compare favorably with those imposed by England and France.

INTERNAL TAXES BURDEN LABOR AND CRIPPLE ENTERPRISE.

Mr. Chairman, this extract was cited to show that exaggerated statements of the average ad valorem rate of duty imposed on imports by the tariff is familiar practice with American free-traders. It, however, serves another purpose. It illustrates the fact that it has ever been the policy of the party of free trade, or of tariff for revenue only, to embarrass our enterprise and labor by maintaining duties on articles which we can not produce, and are therefore compelled to import, and oppressive internal taxes upon our agricultural productions and commodities manufactured therefrom, while demanding reductions or the abolition of the duties on those articles which we can produce and must consume. It is by this policy that our home market for native food and materials, when converted into wares and fabrics, is to be given over to foreign competitors in accordance with the Anglo-confederate doctrine "that our ships and workshops should be stationed beyond the Atlantic."

To illustrate this point, let me invite attention to the fact that while demanding free material, however much such material may have been advanced by labor, they insist upon burdening with direct taxes, averaging about 400 per cent., much of our native raw material when converted by a single primary process of manufacture. The collection of these taxes imposed on the first manufactured product of our leaf-tobacco, our fruit, corn, and rye employs 4,000 men. The cost of collecting them for the current fiscal year is estimated at $4,619,190, and the amount that will be collected from our own people, and chiefly from our farmers and wage-earners, under this odious excise system will exceed $115,000,000, as is shown by the collections for the first ten months.

I repeat the assertion that this one hundred and fifteen millions will be paid chiefly by our laboring people. That the entire sum collected each year is paid by the American people can not be doubted, for when our tobacco, spirits, and malt liquors are exported the internal tax is remitted. There is no attempt to collect such taxes from foreign consumers of these articles. There is not only no law to authorize such collection but the Constitution prohibits export taxes. This one hundred and fifteen millions of dollars is therefore an oppressive assessment upon the enterprise and wages of the American people and a consequent bonus to foreign competitors in the world's markets, the abatement of which is demanded by sound economic policy.

Protectionist Congresses have forced the repeal of duties on raw materials which we can not produce in kind or in adequate substitutes; and in my judgment the arguments that sufficed to accomplish this result and to reduce the amount of internal taxation from more than three hundred and ten millions per annum in 1886 to $115,000,000 should have effected the repeal of the entire excise system. If we are to share in the world's commerce our labor and native materials must be relieved from these direct, oppressive, and needless internal taxes.

THE BILL IS A NEW AND DANGEROUS DEPARTURE.

This bill is a new departure in the revenue system of the United States. It is a declaration by the Democratic party as organized in this House in favor of absolute free trade. It abandons even the shadowy pretense of sympathy with our wage-earners, involved in what is known as incidental protection. It does not propose tariff revision, as that seductive phrase is popularly understood, by correcting "irregularities" destructive of the protective principle that may have found their way into our tariff through hasty legislation, adverse departmental decisions, or by changes wrought by the progress of invention or discovery or the transfer of modern machinery to fields of cheaper labor. Sir, the transfer of the skill, machinery, and energy of America and Western Europe to Russia and Asia is bringing the producing classes of Great Britain, France, Germany, and other continental states with whom our laborers now compete, and by whom they would under free trade be driven from our own market, into direct competition with the emancipated serfs of Russia and the coolies of British India, whose wages average from 4 to 10 cents a day.

It does not propose a horizontal reduction of duties, and in contradistinction with the horizontal bill which was rejected by the last Congress it may, as it proposes to annihilate every industry it touches, be known as the dynamite bill. Should it pass the two Houses and receive the President's approval, how will it affect our lumber interests, the capital invested in timber lands, and the army of laborers who are earning living wages thereon along the Canadian line, from the Aroostook to the Rocky Mountains? Will either of these classes or the people at large be benefited by reserving our immense supply of timber as food for accidental forest fires, or a means of gratifying the vengeance of Indian tribes, or by the transfer to Canada of our lumbermen and the machinery employed in the production of the forms of woodwork which this bill proposes to put upon the free-list?

What will become of the capital and energy invested in sheep husbandry and the labor it employs? How will the proposed repeal of all duties on salt affect the capital and labor employed in the conversion of

brine into salt—that absolute necessity for the preservation of animal health and life? Why should this great agricultural nation practically prohibit, as this bill proposes to do, the production of hemp, flax, and all substitutes for these invaluable fibers? What compensation will it be to the American people that though unpatriotic legislation has driven our fishermen from the seas the prosperity of those of Canada has been improved? The proposition to remove all duties from the productions of these great industries is a bold declaration in favor of absolute free trade, and announces that to divide and conquer the protectionist forces is the policy by which free-traders expect to check the growth and paralyze the productive energy of the country.

The triumph of this bill would inaugurate an industrial revolution, one of the early results of which would be the destruction of our home market. That ours is the best market of the world is attested by the ingenious, persistent, and fraudulent means employed by foreign manufacturers to invade it, of which undervaluation in invoices of goods subject to ad valorem duties is a gigantic illustration, and by the acknowledged fact that it is in this market that our farmers find sale for more than 90 per cent. of their productions. The passage of this measure would, by the general paralysis of industry and loss of wages it would produce, destroy our home market and beget social agitation, the ultimate effect of which no man can predict. The effort to inflict it upon the country is without patriotic justification, and is supported by official statements touching the history and aims of existing tariff laws which are as false as they appear to be deliberate and concerted. That it has the support of the administration is but too apparent. It is true that the President in his annual message indulged in this sentimental reference to the industries and interests which have been encouraged by protective laws and to the interests of American labor.

> Justice and fairness dictate that in any modification of our present laws relating to revenue the industries and interests which have been encouraged by such laws, and in which our citizens have large investments, should not be ruthlessly injured or destroyed. We should also deal with the subject in such manner as to protect the interests of American labor, which is the capital of our workingmen; its stability and proper remuneration furnish the most justifiable pretext for a protective policy.

IT HAS THE SUPPORT OF THE ADMINISTRATION—FLAGRANT MISSTATEMENTS BY THE SECRETARY OF THE TREASURY.

But the author of these glittering generalities referred Congress to the report of the Secretary of the Treasury for practical suggestions, and specially urged upon the attention of Congress the Secretary's recommendations in the direction of simplification and economy in the work of collecting customs duties. We must therefore go to the report of the Secretary of the Treasury to learn by what practical measures the President "would protect the interests of American labor" and "defend against ruthless injury or destruction the industries and interests which have been encouraged by protective laws, and in which our citizens have large investments." Neither laborers nor the owners of capital invested in protected manufactures can derive comfort from these recommendations of the Secretary.

Opening the portion of his report which the President commends to Congress with a denunciation of our customs laws as "a chaos rather than a system," he proceeds to assert that "our tariff laws are a legacy of war," "that they have been retained without sifting and discrimination, although enacted without legislative debate, criticism, or examination." These reflections on the action of a co-ordinate branch of the Government are as indecorous as they are false. I can not persuade myself that the Secretary of the Treasury himself would have ventured upon such audacious assertions. That he could have personally prepared this report is well-nigh impossible; the country knows that until he entered upon the duties of the Treasury Department he had had no official connection with our revenue system; that he had filled no position the duties of which would require or impart familiarity with the history or details of that system, and that he therefore must have devolved the preparation of this portion of his report upon one who availed himself of the Secretary's confidence to advance his personal theories by the reckless audacity of his statements.

Let us examine some of them. Are our tariff laws a legacy of war? If our tariff laws are a legacy of war the nation has never been at peace. The second law to which President Washington affixed his signature was the act known to history as "the tariff act of July 4, 1789." The authors of that act were the illustrious men who achieved our freedom and framed our Constitution. They knew precisely what objects they had in view in passing that law. They were incapable of double dealing on so important a subject, and declared the objects they had in view in a preamble which should not only be understood by their contemporaries, but descend to posterity as a declaration of their purposes and their sense of the objects Congress should ever have in view when considering tariff laws. The opening words of that preamble were:

> Whereas it is necessary for the support of the Government, for the discharge of the debts of the United States and the encouragement and protection of manufactures, that duties be laid on goods, wares, and merchandise imported.

From that day to this we have never been without a tariff. In peace and in war our main source of revenue has been customs duties collected under tariff laws. Three times this source of revenue has been found insufficient for current exigencies and been supplemented for brief periods by war taxes under an excise system. First for a period of less than eleven years to assist in providing means for the extinguishment of the debt to which the nation was born. The law authorizing such taxes was on the earnest recommendation of President Jefferson repealed before that debt had been extinguished. Again we resorted to war taxes as supplementary to customs duties in bearing the expenses of the war of 1812 with Great Britain, but at the end of four years the law authorizing their collection was repealed upon the recommendation of President Monroe. For the third time in our history war taxes were authorized when they became necessary to provide means for the suppression of the rebellion; and it is to perpetuate these temporary taxes in the face of an unbroken line of Democratic precedents, and for the purpose of destroying our industries and the wages of our labor, which have been created and adjusted under protective laws, that the administration and the controlling committee of this House are now laboring.

The administration and the authors and Congressional promoters of this bill resist the repeal of that legacy of war, the internal-tax system, though it would enable us to reduce the duties on every drug, medicine, perfume, or manufactured article of any kind into which alcohol enters as an ingredient or in the preparation of which it is used as an agent. Yes, sir; when we relieve alcohol for use in the arts of the existing tax of $1.78 a gallon a very material reduction of many of our highest customs duties may safely be made.

But to recur to the Secretary's report. Are the assertions that our tariff laws have been retained without sifting and discrimination and that they were enacted without legislative debate, criticism, or examination true? I affirm that no question raised before the first Congress elicited more discriminating discussion than did our revenue system and the means of its administration, especially with reference to the development of our great natural resources, the establishment of private ship-yards, the development of the art of ship-building, and the creation of a merchant-marine which might be depended on for supplying fleets and men for a navy when one should be needed.

From the opening days of the First Congress to the close of the Forty-eighth our customs system has been the subject of almost continuous consideration. Sir, the correctness of this allegation will be apparent from a recurrence to the discussion of the repeal of internal taxes which was begun in 1866, and of the duties on foreign materials the use of which was essential in our newly developing manufactures. Did not the requirement by the House of Representatives that its committee of Ways and Means should devote the vacation of 1869 to the investigation of the subject in connection with examinations of the administration of the laws in the custom-houses of the whole country show its earnest desire to act on questions of revenue in the light of the amplest knowledge and fullest consideration of all the facts and opinions involved? Were the elaborate investigations it was my privilege to make during 1870,'71, and '72, the effect of which was so strikingly demonstrated in the repeal of duties on foreign materials and the rapid reduction of internal taxes, evidence that our tariff laws were enacted without legislative debate, criticism, and examination, and had been retained without sifting and discrimination? Mr. Chairman, as pertinent to the allegations of the Secretary I beg leave to submit a brief but graphic extract from the remarks of General Schenck, chairman of the Committee on Ways and Means, on March 31, 1870:

> A tariff bill is necessarily one of details, and the most profitable discussion of it, therefore, if you admit the propriety of having any tariff at all, will be that which treats of the various clauses and items of which the bill proposed to be enacted into a law is composed. It is a consideration of not one but many different subjects. * * * There are a great many difficulties attending the making or mending of a tariff, and I wish some of these gentlemen who can stand up here and do what it is always so easy to do—criticise, pull down, object—had been themselves submitted to the test of trying to do the same work. Most of the members of this House, whatever the country may know or not know about it, are aware of the fact that the nine gentlemen composing the Committee of Ways and Means have been subjected to confinement and labor almost equal to the pains and penalties of imprisonment in a penitentiary day after day, week after week, month after month, in endeavoring to reconcile, with prudent provision at the same time for the public good, all the different claims presented by persons coming from different parts of the country and representing the different interests and pursuits of our people.
>
> In the course of this investigation and task I have found one thing pretty certain, and that is that every man of every party who has any article or interest to be protected desires that it shall have such advantage in fullest measure, but is too often perfectly willing to join in the cry that nobody else shall have the benefit of like protection. If there has been anything that seemed to me sometimes to exceed the selfishness of the manufacturers who wanted everything that they made covered by a good, high tariff, but everything out of which they made it to come in free, or at the lowest rate, it has been the selfishness of the importers who wanted no tariff at all, or none which should interfere with their bringing in, in the conduct of their trade, anything they pleased, or from which they could make profit, from abroad. The truth is that at every turn, when seeking for information, we have had to encounter this natural bias of selfish and personal interest—generally honest, sometimes disingenuous in the representations made to us, but always to be watched and allowed for as an element in our calculations. Out of this material we have made the bill which we have presented to you, and in framing it we have endeavored to never lose sight either of the Government, which requires revenue, or of the people who consume what is imported, or of the industry or capital which is entitled to be encouraged and cherished wherever that can be properly done.

But let us again recur to the text of the Secretary's report. It says:

> Many rates of duty begun in war have been increased since, although the late Tariff Commission declared them injurious to the interest supposed to be benefited.

In this connection it is pertinent to ask when the war closed and when, if ever, the Tariff Commission made such a declaration. The war closed

early in 1865; the commission reported more than eighteen years thereafter, in the last month of 1883. In the light of these dates the reference to the commission smacks a little too much of the *ad captandum* for an official paper, the averments of which in other respects are not in accordance with the facts of the case. I have shown by official figures that since 1872 nearly one-third of our annual imports have come in free of duty.

Since the close of the war the settlement and development of unsettled portions of our country and of the world have succeeded each other with startling rapidity; invention and discovery have wrought marvels, science has been applied in every direction to the useful arts, and as a consequence duties have been required by and imposed on commodities which were unknown or which we were unable to produce before or during the war. We had not begun the manufacture of steel rails when the war closed, and the first such rails purchased by our leading companies cost $160 in gold a ton, or more than $400 per ton in national currency, when delivered in our ports. Coal-tar was then an annoying refuse at the gas-works of every municipality. It is a waste and a nuisance no longer; it supplies us with alizarine and the aniline dyes which give such brilliant colors in such infinite variety to our textiles. On newly discovered or invented articles duties have been imposed since the war, and I trust that we shall continue to give our countrymen the benefit of every such discovery and invention by the imposition of duties that will justify inventors and capitalists in incurring the risk of attempting their production in commercial quantities. "They," these duties, "have been retained," says the Secretary's report, "at an average ad valorem rate for the last year of over 46 per cent., which is but 2½ per cent. less than the highest rate of the war period, and is nearly 4 per cent. more than the rate before the last revision. The highest endurable rates of duty, which were adopted in 1862–'64 to offset internal taxes upon almost every taxable article, have in most cases been retained now from fourteen to twenty years after every such internal tax has been removed. They have been retained while purely revenue duties upon articles not competing with anything produced in the thirty-eight States have been discarded."

Had the author of this report examined the statistics of the Department for the head of which it was to speak he would have found that the average rate of duty on our imports was not, as he alleges, 46 per cent., but was, as I showed when replying to the misstatement of the report by which the majority of the Ways and Means accompanied this bill, but 30.54 per cent. It was from the records of the Treasury Department I obtained the figures, and I may therefore characterize as an unpardonable misstatement this averment that "duties have been retained at an average ad valorem rate for the last year of over 46 per cent." But how shall we characterize this statement which follows it:

> That the highest endurable rates of duty which were adopted in 1862–'64 to offset internal taxes upon almost every taxable article have in most cases been retained now from fourteen to twenty years after every such internal tax has been removed?

An admission of the truth of this allegation will require us to demand from the Secretary the authority by which he collected from internal taxes during the last fiscal year $112,498,725.54. If, as the Secretary says, the internal taxes have all been removed, why have not the four thousand officers, whose maintenance in office costs nearly $5,000,000 a year, been disbanded? Are these expenditures maintained, this army of retainers disciplined and paid, without authority of law? Or is the statement a falsehood more reckless in its audacity than those with which it is interwoven? Among the many misstatements of this part of the report I am glad to be able to note one candid admission. Following the allegation "that such duties have been retained after every internal tax has been removed" comes the admission that while "they [protective duties] have been retained purely revenue duties upon articles not competing with anything produced in the thirty-eight States have been discarded," which is another way of saying duties protective of the labor involved in our manufactures have been maintained while those on commodities which do not compete with anything we produce have been repealed, and thus comes confirmation from this official source of all my allegations on these points of controversy between the doctrines of free trade and those which demand protection for native industry. That we may have these differences distinctly before us while examining the Secretary's report, let me produce an extract from my remarks of April 25, 1870, in which they were summarized with special adaptation to the circumstances of that day, as follows:

> The protectionists of the United States behold in our country a world gifted with all soils, all climates, all mineral resources, and with the powers of wind, water, and fuel on a grander scale than the nations of Europe combined. They believe in developing these resources and making wind, water, fire, and all the powers of nature disclosed to us by science contribute to the welfare of man. They believe in so applying science and the mechanic arts that the exhausting drudgery of labor may be lifted from the shoulders of the toiling masses and put upon organized iron and steel moved by steam and guided by man or woman.
>
> Sir, if gentlemen will visit the machine-shops in my district (the leading district in the country in machine-shops) they will see that the heaviest work done in many of them could, by the aid of the machinery with which they are furnished, be done by cultured youth and women. The pulley, the wheel, the lever, the screw, and the trip-hammer lift the burden from the muscles of man, and, obedient to his will, achieve their astonishing results.
>
> Yes, sir, the protectionists would develop our natural resources. They would also develop and stimulate commerce. How? By removing all commercial restrictions that intervene between us and the non-manufacturing people of the tropics, the ancient East, and the islands of the sea. The gentleman from New York [Mr. Brooks] spoke of the time when our flag was to be seen in the distant Straits of Malacca. Ay, sir, that was when tin and tea and coffee were free. To woo back that commerce the minority of the committee, as protectionists, propose to put tin again on the free-list with the productions of the lands which yield us tea and coffee and those of the people who dwell among the spice groves of the world or find shade beneath trees that drop their medicinal gums. These people produce what we need for food, for medicine, and in the arts; we produce what they need; and we would remove all restrictions from commerce between them and our countrymen.
>
> We would also remove all restrictions on trade and commerce between American citizens. We wish to emancipate our domestic commerce. To-day the trade of our country is so embarrassed that in large lines of industry and commerce no man knows that the revenue detective may not at any moment come upon his premises and degrade him by arrest and ultimate conviction. We are collecting this year from our own productions and commerce between our own people, by stamp and other internal taxes, from one hundred and thirty-five to one hundred and forty million dollars, thus embarrassing at every point the production of wares, fabrics, agricultural staples, and restraining commerce between American citizens in their own land. Pursuing freedom of trade, the party I represent, the protectionists, would hasten the day when the odious stamp-tax shall be repealed, and when no Government detective shall enter the home or the business place of an American citizen on legal errand.
>
> How would we raise sufficient revenue? Sir, beyond the ocean, lying on the same parallels that mark the northern portion of our country, are manufacturing nations—Great Britain, France, Belgium, Germany, and Russia, which latter country is now, under the protective system, engaging largely in competition in foreign markets with Great Britain and France. They produce what we do—iron, steel, and other useful metals. They spin and weave cotton, wool, silk, and other fibers. They manufacture chemicals. They compete with us in all lines of industry. Here, sir, is the field from which the protectionist would raise the revenue of the Government. The laborer of those nations is paid sometimes one-eighth the wages of American workmen in the same line; sometimes one-seventh, one-sixth, one-fifth, or one-fourth; sometimes, in Great Britain, nearly one-half what the American receives for the same work; and rarely or never a larger percentage. Now, Mr. Chairman, the protectionists would levy such duties upon the productions of this underpaid labor as would make its lordly employers pay the expenses of our Government for the privilege of entering our market and impairing the field for employment and the wages of labor in this broad and richly endowed country. They would maintain such duties on productions common to those countries and ours as would protect the American rate of wages, however high it may be raised. They regard a workman's skill at his trade as his estate, and would thus defend and protect him in its enjoyment.
>
> So much for the theory of protectionists as understood by one who believes he serves his country and mankind by advocating it in season and out of season.

But to recur again to the text of the Secretary's report. What shall I say in reply to his assertion that "our customs laws are a chaos rather than a system?" The first response I make is that if our customs laws are not systematic or are marred by "irregularities," it is mainly due to the inexplicable rulings of the Treasury Department as to rates of duty which had been vindicated by long usage, as in the case of those on worsted goods. In further reply to the railings and unfounded allegations of the report on this point I may cite language used by me in my remarks of May 5, 1882, in justification of a tariff commission. In that address I replied as appositely to this charge of want of system in our tariff as I can to-day:

> I am not prepared to admit that the existing tariff needs such revision as implies overthrow and reconstruction. It needs amendment in matters where, by the development of new resources or the progress of science, art, and inventive power, new commodities, new forms of matter, novel combinations of materials in familiar use have been called into existence, and new commercial designations into invoices. These should have their appropriate classification in the tariff law, and not depend on departmental decision under rates designated for articles "not otherwise provided for," a phrase to be found in each schedule of the statute. The report of a commission, consisting of nine discreet men, uninfluenced by the partisan spirit that pervades this House and the Committee on Ways and Means, will, I believe, while suggesting appropriate modifications of some of its provisions, vindicate the patriotism, wisdom, and prescience of the framers of the existing law. I have no apology to make for the part I have taken in maintaining and, in accordance with my judgment, perfecting that law. Its provisions are philosophical and harmonious. Its framers regarded all forms of American labor, and, placing a duty upon the primary element of an article if of native production, advanced the rate as the article was advanced by an increased expenditure of labor.
>
> * * * * * * *
>
> Its classifications, like its scales of graded duties, were scientific. With the law here before me, I challenge gentlemen to indicate where confusion is to be found in its original classification of commodities. Its works are its ample vindication. It has accomplished the objects its framers had in view; has promoted the development of the vast and varied resources of the country by such a diversification of employment as secures work, wages, and an opportunity for the exercise of the aptitudes of all our people, whether the brawny man with ax or sledge-hammer or the feeble but gifted girl with her pencil.

Mr. Chairman, I reaffirm every allegation embodied in this extract as applicable to "the irregularities of our tariff," which the Republican party, through its last national convention, pledged itself to endeavor to redress. The existing tariff needs revision in so far only as its symmetry has been impaired by ill-considered changes made in the hasty action which attended the presentation, consideration, and adoption of so complicated a measure as a tariff law in the short session which closed the Forty-seventh Congress. A number of its wisely adjusted protective duties have also been materially enfeebled or absolutely neutralized by departmental decisions which the Democratic majority of this House persistently refuses to remedy. But while making these admissions I deny that it requires such revision as implies overthrow or reconstruction on a new basis.

WHAT REVISION THE TARIFF NEEDS TO CORRECT ITS "IRREGULARITIES."

The Tariff Commission did not recommend essential changes in the classification or graded scales of duties of the then existing law. It found them to be as I had described them, scientific, and while it modified some of the schedules it did it with reference to the maintenance of existing classifications, and especially to scales of duties

graded by the amount of labor involved in the production of each article. While now resisting its general revision, I would so amend certain provisions as to make it as protective to all our industries as it was until the supremacy of the free-trade Democracy in this House was achieved and the intrenchment in the Treasury Department of administrative officers whose opinions on revenue questions were not in harmony with the traditions of that party which saved the country and with magical power developed its wealth and international influence. Were the Republicans in control of the House my method of correcting the "irregularities of the tariff," whether they had been produced by construction or unwise legislation, would be to promptly restore by appropriate legislation to the commodity injuriously affected a duty in accordance with existing classifications and general rates of duty.

Among the articles the production of which we have by mistaken legislation practically prohibited is quinine. It furnishes a striking illustration of the unreasoning devotion of the majority of the House to a theory which refuses to correct an irregularity or inequality in the scale of duties however apparent it may be. In response to a senseless demand for free quinine, which had been fomented by many years of demagogic agitation, that article was placed on the free-list. This was done not in a tariff bill which was referred to the Committee of the Whole House for discussion, but by a resolution, no consideration of which was permitted. So long as we can not manufacture quinine and all the salts of quinia ours is not an independent country. Vast sections of our territory, including whole families of States, are subject to malarial influences, the effects of which are controllable chiefly by quinine and its kindred salts, the most potent anti-malarial tonic and febrifuge known to pharmacy.

Ours is, I repeat, not an independent country and can not be while the people of its malarial regions are compelled by specific legislation to depend on foreign countries for these potent remedies. But it is asked whether it be true that we have prohibited the production of all the salts of quinia. It is true. Yes; we have practically done this by placing the finished productions, all of which are highly manufactured by expensive processes, on the free-list, while taxing alcohol, an important agent in their production, under the excise system at the rate of $1.78 per gallon. While other nations protect the finished article and furnish free alcohol for its manufacture, we refuse to follow even the example of free-trade England and impose a duty sufficient to countervail the spirit tax.

In this particular respect England and Holland have furnished us examples which we might follow with infinite advantage. The cinchona tree is a native of the elevated plateaus of South America; its bark was resorted to as a tonic and febrifuge by commercial nations more than a century ago under the designation of Peruvian bark. Meanwhile science has extracted quinine, cinchonidia, and their salts from cinchona bark, the various salts of which are now among the chief curative agencies of the world. To secure a supply of these medicines for her army and navy, especially when in the tropics, England expended millions of pounds sterling in experiments in producing and developing cinchona groves in British India, and Holland, as a commercial venture, made like experiments on the island of Java. Both nations have been rewarded with such success as to give them ample pecuniary returns for the investments made.

We are assured by those competent to speak on the subject that experiments made with intelligent Government assistance in California and on some of the elevated plateaus of our Southern States would be as successful as those of England and Holland have been, and add a new and lucrative department to the industries of this country, as well as tend to the cheapening of potent restoratives for which, while existing legislation continues, we must depend on foreigners for both the raw material and the manufactured commodity.

Among many other articles which we formerly produced with great advantage, the production of which has been suspended by unwise legislation or mistaken departmental construction of laws, I may name pearl buttons, wire rods, fine sheet-iron, hoop-iron, cotton-ties, tin-plates, taggers iron, and worsted yarns and fabrics. The bill which Mr. MORRISON first submitted to the House proposed to put coal and iron ore on the free-list. This proposition was received throughout the iron-producing regions of the South with such intense denunciations as to force the abandonment of a bill framed on that basis; but when the Republican minority have proposed to consider the question of protecting coal and iron ore when advanced to wire rods, sheet-iron, hoop-iron cut to lengths, cotton-ties, taggers iron, and tin-plates, of which taken together we import hundreds of thousands of tons, the idea is scoffed at and the proposition elicits nothing but sneers.

The injustice of singling out individual branches of industry for destruction is admitted, but the admission is made in connection with the suggestion that consent can only be had to put them on equal footing with other industries by making an equal reduction of duties on all other articles. There is not an iron-ore producer or a maker of pig-iron in our country who has not an interest in the restoration of adequate duties to all the metallic products I have named, and the day will come when they will unite in demanding such duties on these articles with as much vehemence as they opposed the proposition to put iron-ore on the free-list.

In concluding this branch of my subject I beg leave to refer to the action of the Treasury Department on the wool and worsted interests. The language of the tariff of 1883, which demagogues tell us destroyed the manufacture of worsteds, yarns, and the fabrics woven thereof, and of women's and children's dress goods, cloaks, dolmans, &c., is not original in that act. It was adopted in the act known as the "wool and woolen tariffs of 1867." It had been formulated by a convention of wool-growers and woolen manufacturers just twenty years ago, and it passed into the statutes of the country one year thereafter. For many years its meaning was not questioned by importer, manufacturer, or administrator of the law. As worsted yarn is made of wool and can be made of nothing else, the fact that worsted was covered by the word "wool" was not doubted or questioned, and having been adopted in 1867 and not changed when the tariff was revised in '70, '72, or '83, it has been discovered since 1883 that the language did not mean what those who embodied it in the form of law in '66, or those who enacted it into law in '67, or those who administered it as law from '67 to '83 believed it to mean.

Meanwhile the worsted interest grew and expanded each year by employing more capital and more wage-earners; the manufacture of ready-made clothing for men and women became a more important branch of business during each of those sixteen years—from '67 to '83—employing more people and creating a wider home market for our native wool, but further progress in these directions has been checked, under the inspiration of the doctrines of free trade; and the manufacturers of woolen and worsted goods in their own behalf and that of their employés, with almost one voice, have appealed to Congress, in the following clear but brief statement of the evils of which they complain and the modifications of law required, to overrule the destructive adjudication made by the Treasury Department:

That this association adheres to its declaration to Secretary Manning, indorsed by a majority of the wool manufacturers of the United States, that there should be "no change at present in the existing wool and woolen tariff, nor a general revision of the tariff by the present Congress."

That this policy does not apply to such legislation as may be necessary to carry out the manifest intent of the existing tariff, as understood by those who assisted in framing it.

That certain constructions of the laws bearing upon the important manufactures of worsted cloths, of women's and children's dress goods and of cloaks, dolmans, &c., have been made by the courts and Treasury Department, which, in our opinion, are contrary to the intent of the framers of the law and positively contrary to our understanding of the meaning of the provisions in question when we recommended their adoption.

That whereas these erroneous constructions subject to a ruinous foreign competition investments of not less than twenty millions of American capital, removed from employment thousands of workmen and from consumption at adequate prices millions of pounds of domestic wool, the adoption of the following joint resolution or its equivalent by Congress is urgently recommended:

A joint resolution declaratory of the meaning of certain provisions in Schedule K of "an act to reduce internal-revenue taxation, and for other purposes," approved March 3, 1883.

SECTION 1. That on and after the date of the passage of this resolution, for all purposes relating to customs duties and importations, "woolen cloths" shall be held and construed to include worsted cloths.

SEC. 2. That for the purposes above named the concluding proviso of paragraph 365 of said act relating to "women's and children's dress goods" shall be held and construed to apply to the whole of said paragraph.

SEC. 3. That for the purposes above named the term "knit goods," in paragraph 367 of the said act, relating to "cloaks, dolmans," &c., shall be held and construed to apply only to garments shaped wholly by knitting.

THE DISTINCTION BETWEEN NATIONAL ECONOMY AND POLITICAL ECONOMY.

The response to these appeals and the many kindred ones pending before the Committee of Ways and Means assumes its character in each case from the doctrines of the economic school to which the respondent adheres. The contention between the economical systems called political economy and national economy involves not merely economic theories, but the whole complicated question of social science and the well-being of nations. The differences between political economy as taught by the Manchester school and propagated in the United States by the Cobden Club and national economy as propounded by Henry Clay and formulated and perfected by Fred. List, Henry C. Carey, Stephen Colwell, Andrew Stewart, William Elder, and their disciples are irreconcilable.

Faith in national economy demands instant affirmative action as the appropriate response to such appeals by citizens to Congress; but the believer in the dogmas of political economy may consistently reply to them with a jeer, and assure those whose means of subsistence are involved in the prosperity of the stricken industries that to make like reduction of the duties which protect other industries is the only description of relief to which he can consent. National economy considers the welfare of each citizen as an element in the general welfare, and regards national strength and independence as second only to the welfare of the citizen; but political economy disregards national boundaries, the autonomy of States, and the sentiment of patriotism. It claims to be cosmopolitan, and announces as its supreme object the procurement of cheap goods. Its beneficiaries are not the poor whose ill-requited toil produces what neither they nor their families may share, but those whose wealth or fixed income enables them to live without labor while consuming that which they have not produced.

This bill by its proposal to repeal all duties which afford protection to the products of several great industries, and to thereby deprive of employment and impoverish the many thousands of laborers engaged

therein, marks the line which sharply divides the adherents of these irreconcilable schools. Each vote upon the bill, should it ever receive consideration, will attest the accuracy of this view. In its pursuit of cheap commodities, which necessarily involve cheap labor, political economy would surrender our home markets to foreigners and promote the free importation of the productions of those laborers who are most poorly paid, fed, and housed. Of course the disciples of this school will support the bill; but as national economy seeks the development of the material resources of each country and of the faculties and aptitudes of its people by converting native material into commodities essential to the comfort and happiness of the people, its adherents will strive to secure to their countrymen the right to supply their own markets, and every national economist will consequently be found voting against this bill. The fact that the House refuses to consider a bill framed in disregard of national interests, though submitted by its leading committee, emboldens me to congratulate my countrymen on this refusal as a sure indication that their representatives will not consent to regard the labor of American citizens as raw material and enter it in a world-wide competition for cheaper wares and fabrics.

The Life-Saving Service.

SPEECH

OF

HON. JAMES BUCHANAN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 10, 1886.

The House having under consideration the bill (H. R. 6975) to authorize the establishment of additional life-saving stations upon the sea and lake coasts of the United States—

Mr. BUCHANAN said:

Mr. CHAIRMAN: I am not surprised that this bill should meet with opposition in certain quarters. Some gentlemen representing districts in the interior seem to think that this Government exists solely for the purpose of carrying their mails and supplying them with vacant post-offices to appease the appetite of hungry patriots. They speak and act as if they were entirely ignorant of the fact that this country stands at the head of the nations of the world in the extent of her commercial intercourse with other countries.

They do not seem to know that while our tonnage is inferior in amount to that of Great Britain, it is superior to that of any other nation, and is in fact nearly four times as large as that of either Germany or France. They do not seem to know that the whole coastwise and lake-front trade belongs exclusively to our own shipping, and that to-day we have 2,895,371 tons afloat engaged in that trade. Born hundreds of miles from salt water, reared far from the busy haunts of commerce, their minds do not seem to have yet broadened enough to understand fully the wants and necessities of "those that go down to the sea in ships." To them a clumsy dug-out propelled across some muddy bayou, or down some snaggy stream winding sluggishly through a cottonwood bottom, is the climax of navigation. Their hearts never glowed with admiration as they looked upon the full-rigged ship under her cloud of canvas sailing majestically like a thing of life upon the ocean's blue. Their pulses were never quickened as they watched the swift and powerful "greyhound of the seas" plow the mighty deep.

Perchance they never breathed the life-giving salt-sea air; its breezy freshness and the murmur of the surf are all unknown to them. And when secure in their homes the stormy winter's night shuts down with its darkness and cold and driving sleet, they know nothing of the thousands of brave hardy seamen off the coast, covered with the freezing spray, benumbed with cold and drenched with rain, standing bravely to their posts, or freezing in the rigging, looking anxiously for the warning light which tells them of treacherous shoals or dangerous shore.

They know nothing of the brave and hardy men who all along our coast, in the midst of the storm and darkness, patrol faithfully the beach, peering out over the angry waters into the wildness of the night to catch the first glimpse of some oncoming bark to warn her with ever-ready signal of her danger. And when warning has been in vain, and the tempest has conquered, and the gallant ship lies a helpless thing at the mercy of wind and wave, and her crew and passengers stand face to face with death, then these gentlemen know the result of the courage and manhood of these surfmen as they rush to the rescue, brave the angry waves, and, facing death like heroes, rescue the perishing. And when, as sometimes happens, these heroes, on their errand of humanity, are swallowed up by the angry seas and their brave lives go out forever, then these gentlemen do not know, and perchance do not care to know, the horror and despair which settles down like a horrible pall upon the helpless, often homeless, wives and children left behind.

Ah, sir, I plead with these gentlemen to fully inform themselves as to these things. I earnestly ask them to study more carefully the extent of our commerce, and to more thoroughly know the noble and God-like work our Life-Saving Service is doing. I ask them to come to our coasts, not in the summer when the seas are calm and the waves are stilled, and only the sad murmer of the surf is heard as with eternal unrest old ocean beats against the shore, and the gaudy butterflies of fashion throng the sands, whispering love to hearts that fondly whisper love again, but in the cold and dreary winter, when the ocean beats high, and through the blinding sleet and sharply-driven sands the faithful surfman, in the darkness of the tempestuous night, patrols his lonely beat along the shore.

I ask them to go with me to the desolate homes of those brave men who but a few short weeks ago perished on the coast in my own district in bravely endeavoring to rescue a shipwrecked crew, and mingle their tears with the grief-stricken widows, and look upon the helpless orphaned little ones, left with nothing but a pittance between them and absolute want, and, methinks, their opposition would melt away in gratitude and thankfulness that America had reared such heroes, and the measure I introduced here a short time ago, providing for showing the nation's appreciation of such heroism by making some provision for these widows and orphans, would be speedily reported.

Meanwhile I beg the attention of these gentlemen for a few moments while I state in a few words the facts shown by the official records as to the work of the Life-Saving Service. This service was not established all at once as a fully organized system. First, a few stations on one part of the coast, then another at another point, then one somewhere else, as seemed to be most urgently needed, then upon the lake front, and finally a few upon the Gulf coast. The upper Atlantic coast, being the most exposed to storms and thronged with the greatest amount of commerce, of course has the largest number of stations.

The New Jersey coast, lying so near the great harbor of New York Bay, into which comes the great bulk of the commerce of the nation and down which passes almost the whole of the Atlantic coast trade, needs, with its low-lying shores and outlying shoals, a large number of these stations. Reliable statistics show that year by year there passes up and down that coast within sight of the shore an average of about twelve thousand vessels; and yet one gentleman has said in tones of surprise, almost indignation, that at some points these stations are within "7 miles of each other." Of course they are; they need to be.

A full patrol system has been established along that whole coast, and every night from September to May the whole beach is patrolled by the surfmen. These men live during these months at the stations on the beaches, the beaches being many of them cut off from the mainland through the winter by partly frozen sounds and thoroughfares. The men are separated from their families during this period. They must provide their own food and clothing, the Government furnishing shelter and fuel and one pair of blankets per man.

From dark to dawn, whatever the weather may be, they patrol the beach and as time afford they practice with the surf-boat and other appliances. Some of them have grown gray in the service, but the Government makes no provision for their retirement. The exposure is fearful and must affect in time the strongest frame, but no haven is provided for them when worn out in the service but the county almshouse. For this service these men are each paid a compensation about one-half the amount per day paid to one of the page boys of this House!

The efficiency of this service has been wonderful. During the year ending June 30, 1884, there were within the field of its operations 439 disasters to vessels, of which 64 were total wrecks. The number of persons involved was 4,432, of whom 4,412 were saved and 20 were lost. The total value of property involved was $10,607,940, of which $9,161, 354 was saved. Of these disasters there occurred in the fourth district (which comprises the New Jersey coast alone) 65, of which 13 were total wrecks, and involving 1,176 persons, of whom 1,163 were saved and 13 lost, and involving $3,168,695 of property, of which $2,960,440 was saved and $208,255 was lost.

The total of disasters upon the Atlantic and Gulf coasts was 275 out of the 439 for the year, and it will be noticed that the number, 65, upon the Jersey coast is nearly one-fourth of the total for the whole Atlantic and Gulf coasts, showing the extent of the commerce passing that coast.

For the succeeding year ending June 30, 1885, as gathered from the statistics of the official report (not yet printed) the total of disasters to vessels was 371, of which 56 were total wrecks. These disasters involved 2,439 persons, of whom 2,428 were saved and 11 were lost, and property to the amount of $4,634,380, of which $3,379,583 was saved and $1,254,797 was lost.

The disasters upon the Atlantic and Gulf coasts were 225, of which 52 or nearly one-fourth occurred on the New Jersey coast. In these 52 disasters there was involved $996,800 of property, of which $552,030 was saved and $444,770 lost. The total number of persons involved was 441, and although of these 52 disasters 10 were total wrecks and the loss of property was so great, yet not one life was lost of the 441 involved.

But while no life of passenger or crew was lost, three of the brave surfmen of the Jersey coast went down to watery graves, February 11, 1886, while attempting to rescue the crew of the Austrian bark Kralz-

wika, wrecked on Barnegat Shoals. John J. Soper, Solomon Soper, and Samuel Perrine, of the life-saving crew, were drowned. They left behind them families with but little, if any, means of support. I immediately introduced a bill granting those families relief. The Committee on Commerce failing to report it, I have been before that committee urging its report. As yet the committee has failed to report. I must say I am not surprised. The little interest shown by a majority of the members in the matter convinced me then that it did not have their sympathy.

The objection is made to a civil pension-list. But while this service is not military, it has its hazards as well. The midnight patrol is as destructive to health as the midnight march or bivouac. The number employed is small, only aggregating about two thousand men.

Here is a table showing total casualties in the service:

List of persons who have died by reason of any wound or injury received or disease contracted in the line of duty in the Life-Saving Service since the origin of the service, so far as is known by the records of the office of the General Superintendent of the Life-Saving Service.

Date.	Name.	Grade.	Station.	District.	Nature of casualty, &c.
1876.					
Mar. 1	John R. Gale	Keeper	Whale's Head	Sixth	Drowned while attempting to rescue the crew of the wrecked Italian bark Nuova Ottavia off coast of North Carolina.

May 15	David Hitchens	Keeper	Smith's Island	Fifth	Reported to have died from disease caused by cold and exposure while in the line of duty.
	George T. Warner	do	Watchapreague	do	Reported to have died from disease caused by cold and exposure while in the line of duty.
	Warner Collins	Surfman	Cobb's Island	do	Reported to have died from disease caused by cold and exposure while swimming to a boat during the gale and tidal wave of October 23, 1878.
1884.					
Jan. 11	George Markwick	do	Manistee	Eleventh	Reported to have died from disease contracted in the line of duty.
Feb. 14	Cornelius Paddock	do	Fairport	Ninth	Reported to have died from disease caused by cold and exposure while in the line of duty.
Feb. 27	Nathan Sampson	do	Manomet Point	Second	Reported to have died from disease caused by exposure while in the line of duty.
May 28	Isaac B. Carson	do	Ocean City	Fourth	Reported to have died from disease caused by cold and exposure while in the line of duty.
1884.					
Oct. 31	Charles J. Brandon	Keeper	Saluria	Eighth	Reported to have died from disease caused by exposure while in the line of duty.
1885.					
Sept. 22	William Jones	do	Racine	Eleventh	Drowned while at boat drill.
1886.					
Feb. 11	John I. Soper	Surfman	Barnegat	Fourth	Drowned while attempting to rescue the crew of the Austrian bark Kralzvika, wrecked on Barnegat Shoals.
	Solomon Soper	do	do	do	
	Samuel F. Perrine	do	do	do	
1884.					
Sept. 26*	William P. O'Neal	Ex-surfman	Chicamicomico	Sixth	Alleged to have died from an injury received in the line of duty.

*About.

In all probability not all of these thirty-four men left families behind them. But suppose they did, can not this great country, the commerce of which is benefited so much by this service, afford to make a slight recompense to the families of those who lose their lives in the service? From the organization of the service to June 30, 1885, the service saved 25,236 lives and $36,277,929 in value of property. In the light of these figures the objection becomes ridiculous. But if this Government is too economical to do justice to these men, a suggestion may be in order.

Several of the committees of this House, which have no business or next to none to come before them, are provided with clerks. Some of these clerks have nothing to do but draw their pay, frank the chairman's documents and speeches, and help him "mend his fences." Discharge some of these. True, it would disturb the "soft snaps" of some "political workers," but it would save enough cash to the Treasury to meet this new demand.

But, pleasantry aside, in the name of justice and of humanity, in the interests of the vast commerce of this great country, I demand of the national Congress that these noble saviors of life and property should henceforth as they go on their perilous mission go with the assurance that if in saving the lives of others they lose their own a grateful country will care for the widow and the orphan left behind. This may be denied now. Carelessness and callousness may defer the time. "Tehuantapec-ship railway," "Mississippi levee," and "refunded cotton taxes" may each thrust the arm to the elbow into the public Treasury unrebuked; but the time is not far distant when this Republic will recognize that her first duty is not toward the schemer and the plunderer, but to the men whose sole duty it is to save the lives and property of her citizens and to their orphaned families.

The Surplus in the Treasury.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 13, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt—

Mr. McMILLIN said:

Mr. CHAIRMAN: The bonded indebtedness of the United States is $1,210,637.612. Of this $144,046,000 is now due, subject to call, and has been for years, with not enough money to pay it off. Of the remainder $250,000,000 is payable in 1891, and $737,759,700 in 1907; the small balance, at a different time.

Almost all of this debt is owned by less than one hundred thousand people in the United States. Were it imposed pro rata the portion of indebtedness of each man, woman, and child of our 57,000,000 population would be $21. Shall they owe it forever, or shall the money now in the Treasury and hereafter to be brought there by taxation be used to pay it and stop interest? That, sir, is the question involved here.

Mr. Chairman, I shall not occupy the time of the House at great length in the consideration of the resolution now pending. To my mind it is of the utmost importance to the people of the United States. Believing as I do that contraction of currency and hoarding of large amounts of the public money are injurious to commerce and present strong temptations for injudicious and extravagant legislation, I favor the resolution which has been read.

The resolution which I introduced at an early day this session provided that there should be held for redemption purposes not more than $75,000,000 instead of one hundred millions. But the committee in its wisdom saw fit to fix the amount at one hundred millions. I believed then, and do yet, that seventy-five millions were ample for the purpose. In fact my judgment is that it would not be unsafe to operate with even a less reserve; but it is evident that the retention of a less sum than one hundred millions can not now be enacted into law, and I therefore support this proposition.

According to the best estimates that I can obtain, Mr. Chairman, as to the currency of the Government, there is on deposit in the Treasury of the United States, in the national banks, in savings-banks and other depositories throughout the country, $727,122,021.

Mr. HENDERSON, of Iowa. Belonging to whom?

Mr. McMILLIN. To the people. I speak of that which constitutes the currency of the people of the United States, their circulating medium. The entire circulating medium, according to the best statistics at hand, is $1,556,814,789, which leaves a total in actual circulation among the people, in addition to that which is deposited and to which I have alluded, of $829,792,777. Therefore the payment of the amount of money that is proposed by this resolution will have the effect, if it should all go into active circulation, to increase the circulation that is actually among the people, outside of the depositories named, nearly 10 per cent., or about one-sixteenth of all the coin and currency we have. As was stated by the gentleman from Illinois [Mr. MORRISON], it means the giving of employment to one hundred thousand workmen. It means, Mr. Chairman, not only that, but it means the subsistence of the five hundred thousand people who are always dependent upon one hundred thousand workers. I believe it means more activity in trade, less discontent with labor. I know it signifies the payment of less interest.

I have already given the condition of our bonds.

The gentleman from Illinois [Mr. MORRISON] has stated, Mr. Chairman, in so clear and succinct a way that I will not reiterate it here the amount of money held in the Treasury. The question has been propounded by a gentleman on the other side, "What has become of the $400,000,000 of surplus?" The truth now is, as the truth always was, that there was never $400,000,000 of surplus in the Treasury.

No man in his right frame of mind, so far as I know, has ever alleged that there was that much of reserve in addition to the amounts held subject to specific demand by the Government. There is that amount of cash there, but most of it is held for redemption of gold and silver certificates which have been issued on it, or other obligations recognized by law, which makes it impossible for us to appropriate it.

There is, first, all of the gold and silver which is represented by outstanding gold and silver certificates. There is, secondly, the subsidiary coin, amounting to more than $29,000,000. There is the fund held for the redemption of the national-bank notes where the banks issuing them have failed, or where banks are reducing their circulation. When you count the entire amount of money that is actually in the Treasury above the legal demands outstanding it figures up the sum of about $200,000,000, and of this more than $29,000,000 is subsidiary coin. So that if the resolution goes into effect there will be unavailable for payment on the debt $100,000,000, now as heretofore held for redemption purposes, twenty-nine millions of subsidiary coins that are not a legal tender for large debts but are legal tender in limited amounts, and other sums not necessary to be mentioned here. The amount, therefore, of money that can be paid under the resolution now will be, according to the last report of the Secretary of the Treasury, $76,044,000, which will leave us owing about $70,000,000, which has been due for years and which we can not yet pay for want of money.

But the immediate payment is not the only good that comes from the resolution; for it provides, Mr. Chairman, that when the amount of money in the Treasury in excess of these legal demands shall exceed $100,000,000 by $10,000,000, then it shall be the duty of the Secretary of the Treasury to make a call and pay the money upon the indebtedness of the United States. After all has been applied that can under this resolution and the existing condition of the Treasury be applied to the bonded indebtedness now due there will be the amount I have just indicated still subject to call.

What excuse is there for an intelligent and patriotic representative voting to pay interest on one hundred and forty-four millions in bonds when you have the money in the vaults to pay much of the principal? What excuse can we give to those who have placed such a high trust in our hands for a refusal to pay out the money, refusal to stop the payment of interest, refusal to let this money go forth into the channels of trade to quicken commerce? What is the situation to-day? I should not overstate it if I were to say that there are hundreds of thousands of men out of employment. The wheels of industry are clogged. The channels of commerce are stopped. Men are clamoring and striking for higher wages than their employers say they are able to pay. In such a situation shall we stand here idle and see $176,000,000 hoarded in the Treasury and refuse to pay out a dollar of it upon the bonded indebtedness of the Government? The gentleman from New York [Mr. HISCOCK] has said that this means repudiation. In what school of politics has he been taught? From what fountain of wisdom has he obtained that thought which leads him to conclude that the keeping of only $100,000,000 in the Treasury to redeem the greenbacks is repudiation?

Why, sir, how much of this greenback currency is presented for redemption annually? That becomes a legitimate question here. I have not had occasion this year to inquire into it, but I have in past years, and I have found that for the first one or two years after the redemption act went into effect there was presented in greenbacks to be redeemed by the Government only about $12,000. The amount presented has been merely nominal. So from that time to this we have held one hundred millions of gold in the Treasury, upon which we have paid from three to five million dollars of interest annually, for the simple purpose of redeeming a few thousand dollars a year of greenbacks when presented!

Where is there a private citizen who would be guilty of the folly of keeping a greater proportion than one hundred millions to keep up resumption of specie payments under such circumstances? Who is seeking, who is desiring, to exchange greenbacks for gold? But the gentleman from New York has seen another ghost; another trouble looms up before him. He says that this means to pay the bonds in silver. The resolution does not necessarily mean any such thing. But if it did, where does the gentleman find any law, on any statute-book, enacted under any administration, promulgated by any authority, which holds, or ever held, that those bonds were above silver payment? He says that the Secretary of the Treasury when seeking to place them issued announcements teeming with the statement that their payment would be in gold. The Secretary of the Treasury is an officer under the law. His *ipse dixit* outside of the law can not change the statute. But if it were as the gentleman from New York assumes, what hardship would come to the creditors of the United States?

Were not these very same bonds, many of them, sold for greenbacks that were not worth more than 50 cents on the dollar, and have not the holders of the bonds already received more in gold interest than the principal of the bonds? I am not giving this as a reason why we should pass a law providing for payment of the obligations of the Government in silver, but I cite it to show that no citizen has a right to complain against the silver currency. It was recognized by the Constitution and the laws as lawful currency when these bonds were issued. The people want nothing more and will have nothing less than the law of the contract. The gentleman from New York says that the silver dollar is worth only 75 cents in the dollar, when every member of this House daily uses it in all commercial transactions at a par with gold; and the gentleman from New York himself could not be induced to sell a thousand silver dollars, standard weight, at 99 cents on the dollar. I undertake to say that, taking the whole transactions of the people into consideration, there are a thousand transactions in which silver is used for payment where there is one in gold.

The gentleman from New York may as well not vex his pure spirit on the question. Neither the representations of the ex-Secretary of the Treasury, Mr. SHERMAN, the forebodings of the gentleman from New York, nor anything else can discount the silver dollar. When I consider the relentless war made on it I wonder not that it has met the disfavor of some, but that it has held its ground so well. It was stricken down once. It was demonetized through fraud; and the dastardly, treacherous author of that act has never yet been bold enough to raise his head and say, "I did it." Yet there was a power abroad that brought it back into circulation. It is here now. It is, as I have said, money of the Constitution. Gold also is money of the Constitution. They are together, and it ought to be the effort of every patriotic citizen to keep them together.

This House only a few days ago did a thing that will go very far to popularize silver by issuing silver certificates of one, two, and five dollar denominations. Whenever you allow representatives of it in small denominations to go among the people, then every dollar of silver can be represented in actual circulation. This the House has done, and I sincerely trust the Senate will concur in the House's action.

The gentleman complains that silver can not be kept in circulation. There has never yet been a currency that would keep itself in circulation. When this Government receives all kinds of currency in payment of its dues and only pays out one or two kinds, that which is discriminated against will inevitably go to the wall so far as actual circulation is concerned. It has been urged that the passage of a resolution of this kind and the payment of the bonded indebtedness of the United States would result in a contraction of the currency, because of the fact that the bonds now outstanding are held by national banks, which must close out when the bonds are redeemed. Let us examine that question for a moment.

It is true that of the one hundred and forty-four millions of bonds now outstanding subject to call one hundred and six millions are held

by national banks, and upon them currency to the extent of 90 per cent. on the dollar, or $95,400,000, is outstanding. But let us examine the operation of the law when this resolution goes into effect and the bonds are paid off. The money with which we seek to pay them is now out of circulation by being held in the vaults of the Treasury. When we pay it out it goes into circulation, instead of the national-bank currency which is now outstanding, and which would be withdrawn by the operation provided the banks did not buy other bonds to be used instead of those called.

Mr. PAYSON. And there is 10 per cent. more of it.

Mr. McMILLIN. As my friend from Illinois [Mr. PAYSON] very truly says, not only this amount but 10 per cent. more goes into circulation; in other words, where $100 is now in circulation there will be $110 when redemption has occurred. How, then, can redemption be injurious? It is true there might be a reduction in the circulating medium of the country to the extent of 90 per cent. on the $106,000,000; but the only difference possible will be that instead of being locked up in the Treasury the money now there will be in circulation among the people and may take the place of the banks' issues.

Mr. FELTON. Practically there will be 10 per cent. more in circulation.

Mr. McMILLIN. As I have just said, there will be practically 10 per cent. more in actual circulation after we redeem the bonds than there is now. Not only that, Mr. Chairman, but while the payment of the bonds could not in any event cause a withdrawal of more than $95,400,000 national-bank circulation, there would be put in circulation $144,000,000 from the Treasury by bond payment.

Mr. BRECKINRIDGE, of Kentucky. The gentleman will allow me to say that the national-bank notes now secured by the $106,000,000 of 3 per cents will not necessarily be withdrawn when those bonds are redeemed. The banks may put in place of the 3 per cents bonds of other denominations—4 per cents and 4½ per cents—so that there will only be a difference in the classes of bonds deposited to secure the circulation.

Mr. McMILLIN. I thank my friend from Kentucky for his suggestion; in the haste of argument I might have failed to comment on that fact so fully as I should. It is true, as the gentlemen says, that the redemption of these bonds does not necessarily force any bank out of existence, though it may force it to obtain other securities.

Mr. BRECKINRIDGE, of Arkansas. And if it does——

Mr. McMILLIN. And if it does there will be no contraction of the currency. The money now hoarded in the Treasury will be paid out and would take the place of any national-bank currency redeemed by the calling of the bonds on which it was based.

Mr. BRECKINRIDGE, of Arkansas. It is important in this connection that the basis of the circulation of the national banks should be stated. Omitting the odd figures, and omitting also some securities of small amounts, these banks have as the basis of their notes $106,000,000 of 3 per cents, $114,000,000 of 4 per cents, and $50,000,000 of 4½ per cents; so that they have now a smaller amount of 3 per cents than of other denominations.

Mr. McMILLIN. My friend from Arkansas is quite correct in that statement. A majority of the banks, counted by the basis of circulation, have now other securities than 3 per cents. But if all these bonds were out of the way I have abiding faith that the wisdom of Congress, the wisdom of those who are to come after us, will be sufficient to provide for every emergency. No calamity can possibly happen in this regard. None but a fool will deny that a people who bridged over greater difficulties than any before us now, when they numbered but thirty-five millions and were torn asunder politically, States seceding and a war raging, will, when united and cemented as brethren, knowing no North, no South, no East, and no West, have power and patriotism enough to provide whatever currency the commercial needs of the country may demand.

This resolution does not seek to interfere with a single vested right of any creditor of the United States. It does not seek to turn the people loose into wild-cat operations which shall impair public or private credit, but it does seek to pay out money which is now in the Treasury and the presence of which in circulation is the people's greatest present need.

But the gentleman from New York thinks that if we should reduce the amount in the Treasury there would probably be a run upon it. That does not necessarily follow. Suppose you have $25,000,000 in silver in addition to a gold reserve? Whenever any man or men may come proposing a run on the Treasury merely for the purpose of raiding it, let them be told to go and get their carts to carry away their silver, and they would soon be satisfied to demean themselves properly and treat their Government right. I would never discriminate against any citizen presenting a just demand. We have gold and silver as currency; and I would pay the citizen of the United States whatever might be most convenient to him, provided it did not injure the Government. I would recognize and discharge every legal obligation. But whenever any man or combination of men have so little patriotism as to be ready to "corner" the Government and put it in straitened circumstances, he or they should be thwarted by every fair and honorable means, even to loading down with silver. [Applause.]

Mr. Chairman, there are many things which might be said concerning the effect this resolution will have upon the commerce of the country. You may examine the history of this Government and you will find that the period in which manufactures flourished most, in which railroads were most extensively built, in which the people were freest from that contraction of the currency which is their financial destruction, was the period when we were paying off most of our public indebtedness. What will be the effect of this resolution upon the people? Its first effect will be to put into tangible and taxable investment property that is now held free from taxation and kept out of investments which pay anything to the laborer. It will result necessarily in a reduction of the rate of interest, than which no greater blessing, in my opinion, can come from it. Ricardo was certainly correct in his theory upon that subject. It may be that an effete and rotten monarchy needs a bonded indebtedness to keep it from going to pieces; it may be that where the people do not love the country as we do ours it is necessary to have a continuing, perpetual debt to keep the people from rising up and destroying their oppressors. But in a republic the time can never come when "a public debt is a public blessing." On the contrary, in a country like ours a public debt continued longer than is absolutely necessary becomes a public curse.

Sir, if there ever was a time when it was necessary to postpone the payment of the debt of the United States it was the period immediately succeeding the Revolutionary war. Three millions of people emerged from a bloody and devastating war of eight years; were prostrate and the country laid waste. Yet in his second annual message to Congress President Washington urged the payment of the debt in the following patriotic language:

> Allow me, moreover, to hope that it will be a favorite policy with you, not merely to secure a payment of the interest of the debt funded, but as far and as fast as the growing resources of the country will permit to exonerate it of the principal itself.

In the last annual message sent to Congress by him during his first term as President he urged debt-payment in these words:

> I entertain a strong hope that the state of the national finances is now sufficiently matured to enable you to enter upon a systematic and effectual arrangement for the regular redemption and discharge of the public debt, according to the right which has been reserved to the Government. No measure can be more desirable, whether viewed with an eye to its intrinsic importance or to the general sentiment and wish of the nation.

After his re-election his fifth annual message contains this:

> No pecuniary consideration is more urgent than the regular redemption and discharge of the public debt. On none can delay be more injurious, or an economy of time more valuable.

The danger to our Government from failures to extinguish the debt he predicts as follows in his sixth annual message:

> The time which has elapsed since the commencement of our fiscal measures has developed our pecuniary resources so as to open the way for a definite plan for the redemption of the public debt. It is believed that the result is such as to encourage Congress to consummate this work without delay. Nothing can more promote the permanent welfare of the nation, and nothing would be more grateful to our constituents. Indeed, whatever is unfinished of our system of public credit can not be benefited by procrastination; and, as far as may be practicable, we ought to place that credit on grounds which can not be disturbed, and to prevent that progressive accumulation of debt which must ultimately endanger all governments.

In the seventh he says:

> Whether measures may not be advisable to re-enforce the provision for the redemption of the public debt will naturally engage your examination. Congress have demonstrated their sense to be, and it were superfluous to repeat mine, that whatsoever will tend to accelerate the honorable extinction of our public debt accords as much with the true interests of our country as with the general sense of our constituents.

When the services of this incomparable patriot were drawing to a close he said in his eighth message:

> Posterity may have cause to regret if from any motive intervals of tranquillity are left unimproved for accelerating this valuable end.

When the elder Adams succeeded General Washington as President he took up the first President's refrain in his very first message to Congress in this language:

> The consequences arising from the continual accumulation of public debts in other countries ought to admonish us to be careful to prevent their growth in our own.

And during his four years' service as President I do not think he failed in a single annual message to urge the extinguishment of the debt.

Now, Mr. Chairman, let us see what were the views of the author of the Declaration of Independence on this important question. Surely, if any man knew and appreciated the nature of our Government, he did. He seems to have gathered much of the political wisdom of all ages and all climes. In one of his earliest messages he said:

> When effects so salutary result from the plans you have already sanctioned, when merely by avoiding false objects of expense we are able, without a direct tax, without internal taxes, and without borrowing, to make large and effectual payments toward the discharge of our public debt and the emancipation of our posterity from that moral canker, it is an encouragement, fellow-citizens, of the highest order, to proceed as we have begun in substituting economy for taxation, and in pursuing what is useful for a nation placed as we are, rather than what is practiced by others under different circumstances. In the mean time, by payments of the principal of our debt, we are liberating, annually, portions of the external taxes, and forming from them a growing fund still further to lessen the necessity of recurring to extraordinary resources.

When Mr. Madison came to the Presidency there was still a public debt. He congratulated the country toward the close of his administra-

tion upon its ability to continue to pay off the debt. The following is an extract from his eighth annual message:

In directing the legislative attention to the state of the finances, it is a subject of great gratification to find that even within the short period which has elapsed since the return of peace the revenue has far exceeded all the current demands upon the Treasury, and that, under any probable diminution of its future annual product which the vicissitudes of commerce may occasion, it will afford an ample fund for the effectual and early extinguishment of the public debt.

Nor was President Monroe less emphatic on this question. He uttered the following, in line with his predecessors, concerning it:

Estimating, then, the whole amount of the public debt at $79,000,000, and regarding the annual receipts and expenditures of the Government, a well-founded hope may be entertained that should no unexpected event occur the whole of the public debt may be discharged in the course of ten years.

Mr. Chairman, John Quincy Adams held similar views while President, as will be seen from the following extract from one of his messages:

The deep solicitude felt by our citizens of all classes throughout the Union for the total discharge of the public debt will apologize for the earnestness with which I deem it my duty to urge this topic upon the consideration of Congress; of recommending to them again the observance of the strictest economy in the public funds.

Sir, when General Jackson came to the chief magistracy he urged speedy payment of the debt and discussed the question with his usual vigor and boldness. He referred not alone to the effect upon the Government as a government, but commented upon the evil effect that the contrary policy, if adopted, would have on the people. In every message sent by him till the debt had been paid he implored his country's representatives to free themselves from the dangerous shackles of indebtedness. His first message contains this language:

The management of the public revenue—that searching operation of all governments—is among the most delicate and important trusts of ours; and it will, of course, demand no inconsiderable share of my official solicitude. Under every aspect in which it can be considered it would appear that advantage must result from the observance of a strict and faithful economy. This I shall aim at the more axiously, both because it will facilitate the extinguishment of the national debt, the unnecessary duration of which is incompatible with real independence, and because it will counteract that tendency to public and private profligacy which a profuse expenditure of money by the Government is but too apt to engender.

In his third message he held out the hope that his administration could pay the debt, adding in exultation:

We shall then exhibit the rare example of a great nation, abounding in all the means of happiness and security, altogether free from debt.

His fourth message, in 1832, contains this:

I can not too cordially congratulate Congress and my fellow-citizens on the near approach of that memorable and happy event, the extinction of the public debt of this great and free nation. Faithful to the wise and patriotic policy marked out by the Legislature of the country for this object, the present administration has devoted to it all the means which a flourishing commerce has supplied and a prudent economy preserved for the public Treasury. Within the four years for which the people have confided the executive power to my charge forty-eight millions of dollars will have been applied to the payment of the public debt.

The following message contained this language:

From this view of the state of the finances, and the public engagements yet to be fulfilled, you will perceive that, if Providence permits me to meet you at another session, I shall have the high gratification of announcing to you that the national debt is extinguished. I can not refrain from expressing the pleasure I feel at the near approach of that desirable event. The short period of time within which the public debt will have been discharged is strong evidence of the abundant resources of the country, and of the prudence and economy with which the Government has heretofore been administered. We have waged two wars since we became a nation with one of the most powerful kingdoms in the world; both of them undertaken in defense of our dearest rights—both successfully prosecuted and honorably terminated; and many of those who partook in the first struggle, as well as the second, will have lived to see the last item of the debt incurred in these necessary but expensive conflicts faithfully and honestly discharged.

Sir, what patriotic pride must have thrilled this soldier of the Revolution and hero of New Orleans to announce to Congress, in 1835:

Since my last annual communication all the remains of the public debt have been redeemed, or money has been placed in deposit for this purpose, whenever the creditors choose to receive it.

He had seen and been potent in two wars, the object of one of which was to give mankind liberty on the land, the other to maintain his freedom upon the seas. Having furled his country's flag with honor and been called to its highest civic trust, he could boast not only that independence was achieved and maintained but that this last dollar had been paid. He had fought the good fight, he had kept the faith! But he did not feel that his work was complete till he admonished his country against another evil, the very one we are to-day striving to prevent. This he did in his last annual message to Congress. He said:

The experience of other nations admonished us to hasten the extinguishment of the public debt; but it will be in vain that we have congratulated each other upon the disappearance of this evil if we do not guard against the equally great one of promoting the unnecessary accumulation of public revenue.

Did he, sir, or any of his predecessors regard a public debt as a blessing?

But, Mr. Chairman, Democracy furnished this country with another President who had occasion to speak on this question, for the Mexican war, carried on under Mr. Polk's administration, entailed a heavy debt upon the people. His first message contains this:

A few years ago our whole national debt, growing out of the Revolution and the war of 1812 with Great Britain, was extinguished, and we presented to the world the rare and noble spectacle of a great and growing people who had fully discharged every obligation. Since that time the existing debt has been contracted, and small as it is in comparison with the similar burdens of most other nations, it should be extinguished at the earliest practicable period. Should the state of the country permit, and especially if our foreign relations interpose no obstacles, it is contemplated to apply all the moneys in the Treasury as they accrue, beyond what is required for the appropriations by Congress, to its liquidation. I cherish the hope of soon being able to congratulate the country on its recovering once more the lofty position which it so recently occupied. Our country, which exhibits to the world the benefits of self-government in developing all the sources of national prosperity, owes to mankind the permanent example of a nation free from the blighting influence of a public debt.

In his message of 1848 Mr. Polk said:

A public debt of more than $120,000,000 existed, and it is not to be disguised that many of the authors of the new system did not regard its speedy payment as essential to the public prosperity, but looked upon its continuance as no national evil.

* * * * * * *

Though our debt, as compared with that of most other nations, is small, it is our true policy and in harmony with the genius of our institutions that we should present to the world the rare spectacle of a great republic, possessing vast resources and wealth, wholly exempt from public indebtedness. This would add still more to our strength and give to us a still more commanding position among the other nations of the earth.

It is thus seen, Mr. Chairman, that the fathers of the country, the founders of our Government, the makers of the Constitution, all urged the extinguishment of our national debts. No man who was contemporary with the Revolution and rose to the Presidency ever failed to raise his voice for their payment and against their perpetuation. With a loud unbroken voice they proclaim to us that our safety as a republic and our prosperity as a people lie in ridding ourselves of debt. But, sir, if they had not thus spoken, our reason would teach us that only evil could come from the perpetuation of burdens. So long as we have more than a thousand millions of dollars interest-bearing debt hanging over us we have an excuse for high taxes and complicated tax machinery.

When we propose to reduce the tariff and modify the law which on many articles puts five dollars into private pockets while it places one in the Treasury, we are told, "it can not be done because we owe an enormous debt." When we propose to modify internal-revenue laws and repeal the law which prevents the farmer from selling his tobacco except to a licensed dealer, we are told by some gentlemen that "we can not do it because we must have taxes to meet the national debt." And even to-day, when we are seeking to pay out the money in the Treasury on the bonds that have been due for six years and drawn interest all that time off a tax-ridden people, we are told "You can not safely do it because you will endanger resumption and precipitate a panic." Endanger resumption by making less the amount we owe? Precipitate a panic by putting more money in circulation? No, sir! You will never bring any financial calamity by reducing the amount of interest you have to pay or by putting more sound currency in circulation.

No wonder a new clamor has been raised in these latter days! No wonder some of the holders of untaxable bonds oppose their payment. It is no small thing to have all the blessings of free institutions showered upon us without having to pay the cost of them. But, Mr. Chairman, I am glad to know that many of the holders of the securities do not join in the demand for their perpetuation, but share in the common desire of other good citizens to have the debt paid whenever it is best for it to be.

Sir, there is another reason for the early payment of our bonds. I take it to be a sound principle that the burdens of government should rest equally on all classes. This salutary and fundamental principle of republican government is wholly disregarded in the issuance of our present form of bonds. They are freed from all taxation. The fortunate holders of the twelve hundred and forty-odd millions of Government bonds never see a tax-gatherer. They never contribute upon them one dollar of taxes to support either the Government, State, county, or city in which they live, nor even to the public schools, the proper support of which all favor.

Rapid payment undoubtedly has the tendency, by turning loose locked-up capital, to build railroads, open mines, construct furnaces, build factories, raise the price of farm lands, give thrift to agriculture, and give life and vigor to every trade and every branch of industry. It is true that it lowers the rate of interest, the price of money. That is the only thing it does reduce. But that of itself will benefit the masses by the facility it will afford counties, municipalities, companies, and individuals to fund or renew at a lower rate of interest the matured debts which they are not able to pay.

The debt of the people of the United States—States, counties, cities, and national is as follows:

Aggregate debt of States and Territories	$234,436,261
Net county debts	123,877,686
Net municipal debts	698,270,199
Total indebtedness, according to the census of 1880	1,056,584,146
Debt of the Government of the United States:	
Interest-bearing	1,210,637,612
Non-interest-bearing	536,103,148
Grand total	2,803,324,906

Mr. Chairman, many of our cities are loaded with debts, almost to bankruptcy. Baltimore owes twenty-eight millions; Boston, twenty-three millions; Brooklyn, thirty-seven millions; Cincinnati, twenty

millions; Philadelphia, forty millions; Saint Louis, twenty-one millions; Washington, twenty-one millions; and New York, ninety-six millions.

The mortgage debts of the railroads of the United States are $3,750,000,000, making a total indebtedness of Government, States, counties, cities, and railroads of $6,553,324,906.

There is no means of ascertaining the aggregate of individual debts of our people. But it is known to be enormous. My distinguished friend, General WARNER, of Ohio, who has given this subject much careful thought, in a speech made by him on the silver question in this Hall a few months ago, estimated the tenant farmers of the United States at 4,686,187, as will be seen from the following extract:

We have no statistics in the United States by which to compute the total mortgage indebtedness. In 1880 the census showed 4,686,187 tenant farmers, and a writer in the January North American says "it is a very rare thing in the newer States to come across a farmer who has not a mortgage, or bill of some kind, coming due on his land." But if the mortgage indebtedness reaches no more per capita here than in England it would amount to $8,200,000,000, which would be 41 per cent. of the true estimated value of all the real estate in 1880. This is about the same as the per capita of the mortgage indebtedness of Europe, and is doubtless a low estimate for this country.

He also adds this noteworthy fact:

In the United States, banks, trust, and insurance companies hold $350,000,000 of the national debt; 10,000 persons hold $500,000,000 more, and less than 100,000 out of a population of 57,000,000 own the entire debt. How municipal and mortgage debts are held statistics do not show.

Sir, is it possible that with all this indebtedness hanging over our people, most of it bearing interest, we will keep out of circulation money that would aid in its payment and prevent it from producing bankruptcy? How can we expect pardon from our constituents for the offense of loaning money and forcing them to pay interest on the bonds that are past due? We have taken away from individuals, as well as the States, the right to issue currency. Having done this, they will heap execrations upon us if we lock up from them the only remaining currency they have.

Pensions.

SPEECH

OF

HON. JOSEPH G. CANNON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 30, 1886.

The House being in Committee of the Whole on the state of the Union, by special order, on private pension and removal of disabilities bills—

Mr. CANNON said:

Mr. CHAIRMAN: I do not know that I shall want so much time as the gentleman has given me. I am not going to weary the committee. I would not say a word if it were not patent that there can be no legislation to-night.

Mr. WALLACE. I make the point that there is no quorum in this House, and that without a quorum it is not in order under the rules to proceed further.

The CHAIRMAN. Unanimous consent was given to the gentleman from Massachusetts, and he has an hour. He has yielded for ten minutes to the gentleman from Illinois.

Mr. WALLACE. Unanimous consent was given to the gentleman from Massachusetts to explain this case. Unanimous consent was not granted that he should yield the floor to others for the purpose of general debate.

Mr. CANNON. You can not take the gentleman from Massachusetts off the floor, although the gentleman from Louisiana may succeed in obstructing legislation.

Now, Mr. Chairman, I asked a question of the gentleman from Ohio [Mr. WARNER], which he took some fifteen or twenty minutes to answer. I wish to say a word about his answer. The law, of course, must be enacted under the Constitution by the House and Senate, subject to the approval of the President. There is no law touching pensions or anything else which in its general operation does not work hardship in individual cases, and from the foundation of the Government to the present time it has been the duty of Congress, when in session, monthly, weekly, and I might say almost daily, to grant relief against the operation of general laws in their application in special cases.

The gentleman from Ohio asks for all these bills——

Mr. HERBERT. Will the gentleman allow me to ask him a question?

Mr. CANNON. I will yield a little later on. The gentleman from Ohio asks how much time would it take this House to pass all these bills and how much time for the President to sign them, if he gave ten minutes to each, or to disapprove of them. Yet that is at best but an apology for refusal where we have a chance to do justice. The gentleman must recollect that no President, that no Congress, can deal in detail with all these matters.

Mr. WALLACE. That is what I say.

Mr. CANNON. The gentleman must recollect further if the President of the United States examined the bills we send him individually each session of Congress he could not approve one-tenth of them.

The gentleman knows——

Mr. WARNER, of Ohio. Other than private bills, you mean.

Mr. CANNON. No, sir; I mean public bills. The gentleman knows the practice that the President must necessarily employ, which is to take the bills that are passed to him by Congress, the bills that are prepared by forty or fifty committees here working week in and week out and month in and month out, and when they go to the President for his approval he says that he can not exhaust them, but under the practice he refers them to the different Departments, to the heads of the bureaus and the different divisions for examination, and they report them back to him, and upon these reports he acts. He could not proceed in any other way.

There is no other manner in which he could perform his duties except in that way. It is true that he might in an individual bill outline a policy or speak of general principles; so that there is nothing in that point which the gentleman makes. Why, Mr. Chairman, from the time of Moses, when he found in governing the children of Israel they brought too much work to bear upon him, acting under the advice of his father-in-law, Jethro, he made ordinances for their government and appointed judges over thousands, hundreds, and tens, reserving unto himself the power to determine the hard causes, to the present, all civilized people have followed the spirit of that precedent.

Mr. WARNER, of Ohio. Is not that what Congress should do now?

Mr. CANNON. Congress has passed general legislation, and I grant you it should pass additional general legislation, correcting some of the constructions given by the Commissioner of Pensions to the general pension laws. But Congress has not seen proper to do it.

It has refused both in the last Congress and in this. A bill passed the Senate of the United States that for months has lain without action on the part of the House, a bill that would take fifty to one hundred thousand of the soldiers of the late war that ought to be pensioned and put them on the roll notwithstanding the technicalities, and yet that bill, in the face of the difficulties the gentleman from Ohio points out as embarrassing Congress in its deliberations, has slept its last sleep, I fear the eternal sleep, so far as this Congress is concerned, from that time to now.

Mr. HERBERT. Why did not the Forty-seventh Congress pass some measure of that kind?

Mr. CANNON. The Forty-seventh Congress no longer exists; its acts have passed into history. You can not excuse action now or in the future by asking, Why did not some one in the past do better?

I say in default of that general legislation just such cases as this man's and others who have failed to get their pensions granted have been forced to come to Congress—men who in justice and equity should be entitled to relief, but have no other tribunal but Congress, and when they come here their cases are referred to a committee, which reports in favor of relief, and it is our duty to act upon them.

Why, gentlemen, cases entitled and not entitled to relief are acted upon all the time by Congress. At this session of Congress, without law, we making the law ourselves, being the great fountain of the law-making power of the Government, we granted to Mr. Wintersmith, the father of an ex-Doorkeeper of this House, $3,000, being a year's salary, on the motion of the gentleman from Kentucky [Mr. BRECKINRIDGE], the bill having been introduced in the first instance by the gentleman from Texas [Mr. REAGAN].

Mr. WARNER, of Ohio. Did the gentleman vote for that?

Mr. CANNON. No, sir, I did not. I am not aware that Mr. Wintersmith ever served his country in war, and how much he served it in peace I know not; but I recollect the speech of the gentleman from Kentucky when he presented that bill to the House. He said that Mr. Wintersmith was dead and his mother was dead and his brother was dead, and that it would be a graceful and magnanimous thing by way of condolence to make this appropriation to the father. Why was it done? Because the majority of Congress thought it a fit and proper thing to do. And so all along the line everywhere these bills come up and are acted upon. It is a matter of every-day occurrence.

Mr. WARNER, of Ohio. How many of the eight thousand bills has the House been able to consider?

Mr. CANNON. Why is it that a gentleman of so much ability as the gentleman from Ohio, a gentleman who was noted in war and noted also in peace, should rise in his place to-night and undertake to talk about this question in the manner he did, and say that because we have not the attributes of Divinity, and can not give even-handed justice to every man who served in the late war, therefore we will not give justice to any?

Mr. WARNER, of Ohio. That is not the position I took, but on the contrary, that we ought to have a better means of doing justice to all; and I think we can have a better means.

Mr. CANNON. And I stand with you and agree to help you for a

better means, notwithstanding the fact that I stand with a minority of forty and you stand with a majority of forty. But, Mr. Chairman, the legislation has already been passed by the Senate and you have refused to consider it; and in the absence of consideration of general legislation this and other cases like it on Friday nights should be favorably considered and passed. True, others are equally deserving, but if we can not consider all of the cases, none of those who do not receive it will complain, because we give relief so far as we can.

Now, one word further addressed to the gentleman from Louisiana [Mr. WALLACE]. He says these proceedings are ridiculous; that they are not parliamentary. Why, does the gentleman know that nine-tenths of our legislation is in fact done without a quorum; that a quorum in nine-tenths of the business transacted is not demanded? I ask the gentleman from Massachusetts to give me two or three minutes more.

Mr. RICE. I yield to the gentleman three minutes more.

Mr. CANNON. Does the gentleman from Louisiana know that in the mother country, with a house of commons that is substantially supreme, of over six hundred members, forty members constitute a quorum, and from year to year make provision for the service of that country, reaching out as it does everywhere about the world?

Does not the gentleman also know that, practically, less than forty men in this House from time to time control over nine-tenths of all the legislation enacted? Not the same forty, I grant you, all the time, because gentlemen are divided into committees. Some are on one committee and some on another, and each committee prepares business referred to it, and in the main we all trust the committees from necessity, not only in individual pension bills but in nearly all other matters. There is, therefore, nothing in that point as made by the gentleman from Louisiana [Mr. WALLACE].

I will say to the gentleman from Louisiana you can not convince the people in the North, who carried on the war and whose soldiers fought its battles at $12 and $14 a month that your objections are well founded or that you understand their necessities or that you are correctly extending that even-handed justice that should be given to them on account of the disabilities they incurred that this Government might live. [Applause.]

The Treasury Surplus.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Thursday, July 29, 1886.

The Senate, as in Committee of the Whole, having under consideration the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt—

Mr. PLUMB said:

Mr. PRESIDENT: I would have been glad before taking any part myself in the debate to ascertain precisely what the objection was to this resolution as it came from the House.

One of the members from New York [Mr. HEWITT] who led the opposition to this measure in the other body did so upon the ground that the reserve which the resolution proposes to leave in the Treasury is insufficient for the purpose of the redemption of the outstanding legal-tender notes. In the course of his remarks he said:

Now remember this is fair weather. I do not hesitate to say that in a stormy time $140,000,000 or $150,000,000 is not a sufficient sum of itself to insure convertibility into gold for both the national-bank notes and the greenbacks. But in fair weather it is abundant. The effect of this resolution will be to bring on foul weather—a storm. Instead of being stronger we are weaker; instead of having furled our sails in advance they are all spread to the wind, and the ship, rolling and tossing, will finally go down under the overpowering volume—I was going to say of wind, but currency when inflated and wind are synonymous terms, and therefore I will say of currency which will be poured in for redemption.

That is intelligible. It is the theory of those who favor a gold standard and of those who desire to have the greenback notes retired. We heard the same thing from representatives of the same class on this floor when the act of 1882 was being considered. It has been the burden of the song of the Treasury since that time. But when the Senator from Iowa comes to announce his position on this resolution, as the organ of the Finance Committee of the Senate, he says he is opposed to it in the shape it passed the House because it does not leave any money to pay current obligations. Inferentially I think he stated that $100,000,000 was an overplus rather than an amount too small for the redemption of legal-tender notes. He complained rather that this resolution, according to the construction which he put upon it, required $100,000,000 to be kept exclusively for the purpose of redeeming legal-tender notes, and that was a ground of complaint. So I take it that he thinks $100,000,000 is too much. I should be glad to get the opponents of this resolution together upon some one point if I could, in order that we might not be confused in this debate by attacks from two widely different and wholly irreconcilable standpoints.

Mr. ALLISON. I do not want to disturb the Senator, but I wish to say that inasmuch as this $100,000,000 was irrevocably fixed by the resolution as it came from the other House, I did not propose to debate that question pro or con. I quite agree with the Senator.

Mr. PLUMB. I think the Senator, by the statement he has made, agrees that $100,000,000 of reserve is too much.

Mr. GEORGE. Will the Senator from Kansas allow me to ask the Senator from Iowa what he meant by the expression he used?

Mr. ALLISON. I will.

Mr. GEORGE. What did he mean by $100,000,000 being irrevocably fixed—fixed for what?

Mr. ALLISON. Fixed for the purpose of redeeming United States notes, and nothing else. That is the resolution.

Mr. GEORGE. That is an interpretation of the meaning of the resolution.

Mr. ALLISON. It is not any interpretation. It is the resolution.

Mr. PLUMB. I take issue with the Senator on that, and that was the point to which I was just coming. The language of the resolution is:

That whenever the surplus or balance in the Treasury—

What is that surplus? What is that balance? The resolution goes on to characterize it—

including the amount held for redemption of United States notes—

That is to say, whatever balance there may be, including those moneys which may be held for the redemption of United States notes; and the use of that word "including" distinctly shows that the framer of the resolution had in mind that there were other sums than the revenue for United States notes which would go to make up this $100,000,000 to be held as the surplus or balance in the Treasury; otherwise the word "including" is absolutely irrelevant and misleading. But the Senator from Iowa coupled that with the last sentence of the last clause of the resolution—

the surplus or balance herein referred to shall be the available surplus, ascertained according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1885.

If there had not been thrown on that sentence the calcium light of the construction of the Senator from Iowa, I should have said that meant simply the funds held in the Treasury over and above what was necessary to meet the liabilities, accrued and accruing; that is to say, that which the Government may be called on to pay—the available surplus ascertained according to the form of statement. Now, that form of statement is not private.

Mr. CHACE. Will the Senator allow me a question right there?

Mr. PLUMB. Yes.

Mr. CHACE. Is not the Government called upon to pay the whole of the United States notes?

Mr. PLUMB. When they are presented.

Mr. CHACE. They are liable to be presented, and you have $343,000,000 to meet in that case.

Mr. PLUMB. Not at all. The statement handed me by the Senator from Iowa is only one of the Treasury statements. There is another statement bearing the same date in which is shown the amount which is available for the payment of the public debt.

Mr. ALDRICH. That is the statement of liabilities and assets.

Mr. PLUMB. Very well. One of the statements of the Treasury of this date shows according to the estimate of the Treasurer the amount of money that is available for the purpose of the payment of the public debt. The statement of indebtedness and the statement of assets which may be used in the discharge of that indebtedness is the statement in so many words of the sum which is available for the purpose of paying the public debt and that is stated at about $76,000,000.

The amount as shown here under the head of cash in the Treasury available for reduction of the public debt is $205,202,147.75, and among the items which are held as unavailable for reduction are fractional silver coin, minor coins, &c., amounting to $29,000,000; and the net cash balance in hand under that statement is $75,191,109.95.

The utmost that can be made out of that construction is that the amount available for the purposes of this resolution are that this sum of $75,191,109.95 plus such amounts as may hereafter come into the Treasury, and which may and do actually go into the same fund, are according to the Treasury idea available for the reduction of the national debt.

But the criticism on the form of this resolution on that subject would have come from some other source very much better than from the Senator from Iowa who reports an amendment to the resolution, but forgetting to amend it in this particular in which he says it ought to be amended. If the construction of it is as vicious as he says, if it does incorporate a statement by reference into the body of the law which commits us to no payment at all on the public debt, what shall be said of the discharge of duty on the part of the committee which reports a resolution in this precise state and does not qualify it by any apt and proper words in the amendment which they report? The Finance Committee is here in the attitude of reporting a resolution which they say

adopts the views and incorporates the report of the Treasurer of the United States with the effect to prevent any payment of the public debt whatever, and thus defeat wholly the purpose of the resolution.

I should be glad to have had the ingenuity of the Finance Committee exercised on that point—upon the point of the remedy of that which they claim now to be a fundamental defect in the structure of the original resolution as it came from the House of Representatives—instead of contributing still further to render it abortive by putting on an affirmative declaration to the effect that if the Treasurer of the United States continues to believe as he believes now, as shown by this statement, he shall go on accumulating the money of the people and allowing the national debt to remain unpaid.

Mr. President, for either one of the theories which have been broached in opposition to this resolution as it came from the House its terms in my judgment are ample.

I believe that $100,000,000 is more money than is necessary to be kept in the Treasury of the United States for the redemption of the legal-tender notes. I do not believe that there is any contingency that can be imagined to exist in which that $100,000,000, or any considerable portion of it, will be drawn for the purpose of redeeming United States notes—and why? More than once within the last two or three years greenback notes have been at a premium in New York city simply because they were not in ample supply and because of their very much greater convenience compared with gold or silver for the purpose of the transaction of business in that great metropolis.

One hundred million dollars is fully 33⅓ per cent. of the outstanding volume of that currency. The amount as fixed by the resolution in 1879 is a little less than $347,000,000. The original greenback notes were provided for by the act of July 11, 1862, and therefore twenty-four years since the first issue. The original volume was $400,000,000. The present volume, $346,000,000, includes what is remaining also of the old demand notes issued in 1861, of which there were $50,000,000; and so that original volume of this class of currency, the demand notes and the legal-tender notes, of which there are nominally outstanding $346,000,000 to-day, was $450,000,000. Of course it can not be reduced to an exact mathematical proposition what amount has been lost meanwhile; but will any one say that the loss of one-half of 1 per cent. per annum is too much? Consider the casualties by flood, by fire, which here and there and everywhere occur, in which some portion of this volume of money is destroyed; consider the great fires in Boston and Chicago; consider the inevitable losses which must have occurred on account of the destruction of notes paid to the soldiers in the field. It seems wholly reasonable that from all these sources there must have been a loss, an absolute destruction equal to at least one-half of 1 per cent. per annum.

Upon this basis the amount now outstanding is less than $300,000,000. The Treasury had on hand, according to its last statement, $22,000,000 of these. There is a large portion inevitably held as a reserve for national banks, and which practically therefore is withdrawn from circulation and withdrawn from any possible opportunity or inducement for any one to make use of it or to exchange it for other currency. There never can be under any circumstances over $200,000,000 of this greenback money in actual circulation.

Mr. MAXEY. I should like to make a suggestion to the Senator from Kansas.

Mr. PLUMB. I yield.

Mr. MAXEY. The Senator from Iowa states that there is no law now which absolutely requires $100,000,000 to be kept in reserve, but that it is intimated in the law that that amount should be kept in reserve by the expression that the amount shall not be reduced to less than $100,000,000. We resumed specie payments on January 1, 1879. That was after a period of twenty years during which gold and silver were not in circulation at all except in special localities; and yet notwithstanding that fact there have been presented for redemption but $22,000,000 from 1879 up to this present good hour.

Mr. PLUMB. I am coming to that in a moment. I hope the Senator will not anticipate me.

Mr. MAXEY. Is not that proof conclusive that this amount itself is largely in excess of any necessity?

Mr. PLUMB. I should think it conclusive if there were not even stronger facts that negative the idea that there can be any great presentation of greenback notes for redemption. Under the laws organizing national banks the banks in redemption cities are required to hold 25 per cent. of their liabilities in their vaults. Among the country banks that amount is only 15 per cent. The actual business experience of the country ever since the organization of the national banks shows that these amounts are sufficient for all practical purposes.

I know it will be said that the Government ought not to run the risk which bankers are willing to run in regard to the question of reserve. But look at the difference between the liability of a bank to be called upon to pay out its deposits and that of the Government on account of the legal-tender notes. When a man has a check his first thought is to collect it because it does not perform except in a very limited degree the office of money, and in the next place under the law he is required to exercise diligence in presenting it. If he holds it in his pocket an unnecessary hour, or if he sends it by other than the usual and direct way to the point where it is to be collected and the bank meanwhile has failed, he suffers the loss. He is also responsible for the insolvency of the drawer. It is not adapted in amount or otherwise to perform the office of money, and consequently rarely passes through more than the hands of one person, except as it does so in going the most direct and usual way to the bank on which it is drawn.

And yet with this necessity for the prompt collection of checks drawn against bank reserves the 25 per cent. in reserve in city banks and 15 per cent. in country banks has been ample to keep the solvency of the national banks intact. But when a man has a greenback note how different the case is. It will buy everything everywhere and in all sections of the country equally, and is for all practical purposes, whatever may be said about it, technically money, which will perform the highest office which can be performed by money anywhere. Among the least of its merits is that it can be exchanged for gold or silver at at the Treasury Department, but this the holder does not want, for the greenback is more valuable for use as money than gold.

I once heard a bank president in New York describe in graphic language the great risk that his bank incurred in transferring $800,000 of gold from the New York clearing-house to his bank, a few blocks further up Broadway. It not only had to be transported in a wagon, but the wagon was surrounded by police armed with revolvers drawn. If it had been $800,000 in legal-tender notes it would have gone in a carpet-sack in the hands of the teller of the bank with just as much safety as the gold went under charge of an armed detachment of police.

The day for the use, for the actual and manual delivery of gold and silver as money in this country, has gone by except in a very limited degree. Nobody wants the cumbrous and inconvenient metals. So the greenbacks are not presented at the Treasury for redemption in coin. As the Senator from Texas says, the entire amount presented from 1879 down to date is only about $22,000,000. Who is going to present them for redemption in the future? Will it be the constituents of my friend from Iowa? Will any of the constituents of my friend from Louisiana be found at the Treasury door with greenbacks for which they will demand gold?

Mr. President, the danger, if there be danger at all, of a run upon the Treasury comes from two or three places only in all this broad land, and principally from one. We know that the farmer, that the merchant, the manufacturer, the presidents and other officers of railway companies, none of these men will present a dollar in greenbacks for redemption, because they want the greenback as a more useful medium of exchange than gold can possibly be.

The only source from which danger is ever threatened is Wall street and the corresponding influence in a few large cities which it represents and controls. This interest is that of speculation pure and simple. It represents none of the productive interests of the country, and lives by the spoil it is enabled to levy upon the labor of farm, shop, and field. From this source and this only is danger threatened. And yet the Treasury Department, influenced by Wall street, is strenuously objecting to the passage of the resolution as it came from the House, because of the danger that this same Wall street will, some of these days, make a run on the Treasury, depleting it of its gold.

Wall street, through its agent and ally, the Treasury Department, asking the Government to prepare against its own threatened assault upon the public credit! If Wall street could only control its own piratical tendencies there would be no danger.

This same interest, combined with the national banks of the large cities, threatened Congress when, in 1879, it passed the bill to maintain the volume of greenbacks. They said that was continuing a vicious currency born of the war and that ought to have disappeared with the war; that so long as it remained there would be disturbance, disarrangement of values, and the only way in the world to have a good currency was to give it into the hands of the banks who were thereby to be enabled not only to issue the money of the country but to fix both its volume and its price. But Congress, disregarding the threat and the prophesied danger, passed the act providing that the volume of legal-tender notes should not be reduced; and I risk nothing in saying that the general judgment of the country is to the effect that the measure was wise and beneficial to the best interests of the country, and that the repeal of that law or the enactment of any other which would strike down the legal-tender note or deprive it of any of its functions as money would forever destroy the party which accomplished such a purpose.

Subsequently we were confronted with the maturity of the 5 and 6 per cent. bonds of the United States, and Congress undertook to provide for the issue of bonds bearing 3 per cent. interest, the proceeds of which should be used to take up the maturing ones, and a bill for this purpose passed both Houses. From the first moment that a 3 per cent. bond was proposed until the last act in the drama, the Wall street and banking influences of the country unanimously asserted that a bond bearing such rate of interest could not be sold at par and denounced its proposed issue as unwise and unjust, and when the bill was finally sent to President Hayes, these same people by their clamor and by threatening a panic, which they did their best to produce by reducing the national-bank circulation about $20,000,000, induced the President to veto the bill, and it did not become a law.

The excitement was very great and many and loud were the denunciations heaped on the heads of Congressmen from the West and South who supported the bill for their temerity in presuming to act in financial matters against the opinions of Eastern bankers and brokers. Eastern newspapers were filled with denunciation of Congress on the same account.

And so the bill failed, and financial circles quieted down, having manifested their power and had their own way. Then what happened? The very next session of Congress following the question naturally came up again. By this time new light had come to those who knew so much the year before, and the same bankers and brokers who had secured the veto of the 3 per cent. bond bill now changed front and begged Congress to do what it had before denounced—pass a bill providing for 3 per cent. bonds. A bill was reported from the Finance Committee for that purpose, the bonds to run thirty years, as was the case with the vetoed bill. But Congress had learned something too, and the bill was amended so as to make the bonds due at the option of the Government; and because of that wise provision more than two hundred millions of the bonds have already been paid, instead of leaving them as a legacy to the next generation, as would have been the case if the original bill had passed. So the bankers and brokers builded better than they knew. A 3 per cent. thirty-year bond was not good enough for them, and having beaten that they were glad to get a bond bearing the same rate of interest due at the option of the Government. No one, except those who believed a national debt to be a national blessing, and who think the national debt ought to be perpetual in order to furnish a basis for corporate issues of money, doubts that Congress acted wisely in legislating as it did on the question of refunding the debt. Great good and no harm has come from it.

So when it was proposed to remonetize silver, that was to be the beginning of unnumbered woes to all the business interests of this great country. Gold was going to leave the country; it would be at once at a large premium, and the country would be brought to a silver basis. But all this proved a mistake. Gold is not at a premium, is still money and not merchandise, and instead of leaving the country our stock of it has constantly increased until we have more than ever before and more than any European nation.

The croaking, however, still goes on. The New York banks draw notes payable in gold. The president of one of them said to a customer recently: "Some of these days, and very soon, gold will go up to 20 per cent. premium at a bound." "And then," said the customer, "all your discounts being payable in gold, you will collect the 20 per cent. premium from your debtors." "Yes," was the reply, "but that is not our fault; we must protect ourselves."

To this the customer replied that "less than 20 per cent. stands between the business community and bankruptcy. You add 20 per cent. to the value of the discounts of your bank by adding that much to what their makers have to pay, and you raise them and thereby prevent their paying; and in the attempt to collect the additional 20 per cent. you will lose more than enough of the principal to make up your gain in the premium you will get by exacting gold payments. You and other bankers of all other men in the world are interested that such a contingency as the sudden inflation in value of debts shall not overtake the business world."

There are men who profit by the misfortunes which overtake their fellows; there are men to whom the plunging of the great mass of the people into a great gulf of financial despair and wretchedness would bring wealth; but it is not the man who has got his means in the active current of business; it is not the man who has to depend upon the collection of debts from individuals. What he would gain in one direction he would lose in another. Such men are really interested in maintaining financial solvency rather than bringing about a wreck of it, but they have so long followed the echoes of London opinion that they permit themselves to declaim against their own best interests; in fact, however, they instinctively oppose whatever a majority of Congress favors and without even seriously considering it.

So, as I said, these men deal with panics and talk about them glibly as a means whereby public opinion may go their way and Congressmen yield to do their bidding.

Mr. GEORGE. I desire to ask the Senator from Kansas if he agrees with the Senator from Iowa that the resolution as it now stands requires $100,000,000 in gold to be kept in the Treasury in coin as the basis of redemption of the greenback notes?

Mr. PLUMB. No. I will read the only provision on that subject contained in the law. It is section 12 of chapter 290 of the act of 1882. The main purpose of the section was to authorize the Secretary of the Treasury to issue gold certificates, certificates based on the deposit of gold, and of course the holder of these certificates was entitled to call at any time for the gold which he had deposited. It was his gold. The Government simply was the trustee, the naked trustee without value or without interest; and the proviso to that section is:

Provided, That the Secretary of the Treasury shall suspend the issue of such gold certificates whenever the amount of gold coin and gold bullion in the Treasury reserved for the redemption of United States notes falls below $100,000,000.

The force of this provision is simply that the process of depleting the Treasury of gold by the means of these certificates might be arrested by the Secretary of the Treasury interposing to suspend the execution of the law whenever the gold reserve ran below $100,000,000. There is no setting apart of any fund whatever. The provision is merely negative so far as the reserve is concerned.

Mr. ALLISON. I called attention to the act of 1875, authorizing the Secretary of the Treasury to sell bonds for coin for this purpose, and in pursuance of that requirement he sold $95,500,000; and in my judgment I said he could use that fund for no other purpose than the purpose indicated in the law of 1875.

Mr. GEORGE. How much is that—$95,000,000?

Mr. ALLISON. By the law of 1875 authority was given to the Secretary of the Treasury to purchase coin with bonds for the purpose of redeeming United States notes. In the execution of that authority he did purchase $95,500,000 of coin and put it in the Treasury. So I stated that that money was there for the purpose of redeeming United States notes and only for that purpose by the law.

Mr. PLUMB. The Secretary of the Treasury might have stopped at $50,000,000; he might have gone on selling bonds until he had $500,000,000 if he chose so to do. It was a matter left entirely to his discretion. Whatever he thought was necessary in view of the command of the law that the Treasury resume specie payments, he was armed with all the power that was necessary for that purpose, and he was authorized to issue bonds *ad libitum* according to the provisions of the act of June 14, 1870. That is to say, by the resumption act, the whole power of the act of June 14, 1870, in regard to bonds, was deposited with him for the purpose of providing coin for the redemption of United States notes, and that power is just as strong and intact to-day as it was in the beginning. In other words, he has power to issue $1,000,000, $10,000,000, $100,000,000, a thousand millions, in bonds drawing 4½, 5, or 6 per cent. interest, at his election, for the purpose of supplying coin to meet the needs of the Treasury for the redemption of the legal-tender notes outstanding, and that power is there to-day.

Mr. President, for these reasons I do not believe that there is any risk to the Treasury whatever in reducing this fund to $100,000,000. On the contrary, I believe $50,000,000 is just as useful as $100,000,000, and if I could myself impress my views on legislation to that extent I would cheerfully take the risk, whatever it might be, of fixing that fund at $50,000,000, and no more.

Now, in regard to the current expenses. Under the law as it now is bonds can not be called except on thirty days' notice, and the resolution as it came from the House does not change the law in that respect. Therefore, after the Treasury has got its $110,000,000 extra it still must give thirty days' notice, and it has that time in which to accumulate other sums of money for all the Treasury purposes; but, as the Senator from Kentucky said, we are receiving from the revenues more than $25,000,000 a month. That is not subject to any practical contingency. It does not have to be collected by suit. Just as certain as that the sun rises in the morning and goes down in the evening that money is bound to come into the Treasury. The amount is variable, it is true, but variable within small limits, and always, excepting in cases where we have reduced taxes, the amount increasing rather than diminishing.

The Commissioner of Internal Revenue congratulates himself and the country on the fact that the collections from internal-revenue sources during the last year were $14,000,000 more than the year before. So during this present fiscal year we shall collect, unless all signs fail, $350,000,000 from the various sources of revenue. Against that there is a gross outside annual expense of less than $240,000,000. There is $90,000,000 at the very inside which can be taken for any purpose for which Congress may seek to use it without in any way diminishing the ability of the Government to pay its current expenses. The resolution provides only that not less than $10,000,000 of bonds shall be called in any one month. My friend from Rhode Island is too fresh from his laudation of the Treasury Department for its extreme conservatism to be ready to suggest here that the Secretary will go beyond what the law absolutely requires him to do in this regard. And it is safe to say the Secretary will not call more than $10,000,000 per month unless the surplus increases very greatly.

So, Mr. President, if $10,000,000 is called next month and each succeeding month it will be accompanied by an addition of almost as much money to the Treasury from the revenues unless all the signs fail. Suppose in place of being $90,000,000 the surplus for this fiscal year is only $50,000,000. What is on hand now is, according to the Treasury statement, $75,000,000. It is more than that. There is $11,000,000 in addition which, according to the Treasury statement quoted in this resolution, is interest accrued, an item which never appeared in the statement until the incoming of this administration. It is interest which has accrued but which is not due. In other words, the actuaries of the Treasury Department compute each day the interest that has accumulated on the outstanding debt and carry it out in the statement as an obligation, although it is not due until the end of the quarter.

There is to-day, according to that statement of the Treasury, nearly $100,000,000 over and above $100,000,000 held for the redemption of United States notes, which ought to be taken out and paid on the public debt. Now add even the admitted $75,000,000 surplus at present to a minimum of $50,000,000 to be derived this fiscal year in excess of

expenditures, and we have a total of $125,000,000 which can be paid on the debt during the year, while the resolution is compulsory only to the extent of the payment of $120,000,000. What does that lack of being a safe proposition? Is there any possibility that the Treasury will be lacking in funds for current expenses? Is it no light matter to put $120,000,000 rather than to keep it locked up in the Treasury? Is it nothing that over $3,000,000 per annum interest will be saved to the people?

The Secretary of the Treasury, Mr. Folger, who came in with the administration of Mr. Arthur, was not accused of lacking in wisdom and common sense. He sums up that question in his report for 1883 in these words:

> The public sense is shrewd enough to see that a debtor owing a large sum upon interest which he must pay at short intervals, and some of the principal of which he may pay off whenever he pleases, and thus save interest, would not be deemed a good manager of affairs if he should give away or loan on terms yielding no income and not likely to insure punctual repayment the means which good luck or prudent conduct had put in his hands, and that it would be wiser for him, with the cash he had, to extinguish so much as he could of the debt against him.

He was discussing then primarily the proposition to lend the surplus money to the States—the United States. He goes on to say:

> And the United States has such means and owes such debts. It owes over a billion and a quarter of dollars, which is running upon interest. It has the option to pay over three hundred millions of the debt whenever it pleases. It must pay the interest on the principal unpaid at short intervals. It is not good sense, nor is it common prudence, to give away or loan its means, instead of using them to pay the debts against it, while, because of its abundant prosperity, it is easy to do so. There is neither direct nor consequential benefit to that body-politic, which is the United States, in the course that is proposed. A surplus is in hand. No way to use it so well, so directly and unerringly, as with it to pay off and take up that debt. It admits of no doubt that thus the people of the Union are well served and their money so paid as to redound to their lasting advantage.

That is axiomatic; it would seem not to be necessary to quote authority on a subject of that kind; but in view of the course of this debate it at least was not improper to refer to the opinion of that very eminent official. At that time there was less money in the Treasury than there is now. When this administration came in there was outstanding $1,260,772,612 of interest-bearing debt of the United States. On the 30th day of June, 1886, it had been reduced to $1,210,637,612, a net reduction of $50,135,000; but the cash in the Treasury had increased nearly $51,000,000 beyond the amount left by Mr. McCulloch, the last Secretary of the Treasury under President Arthur. I thought myself that Mr. McCulloch kept too much money on hand, and yet I could see how, like a tenant just going out of possession, he would desire to have it left in the best possible condition in order that the new occupant might not be embarrassed in any way.

After the present administration came in the country was regaled with monthly statements showing large reductions of the public debt, but it was soon noted that reducing the public debt meant, according to the Treasurer under its new management, the accumulation of a greater surplus; and that under this process the bonds were still outstanding, still drawing interest which was duly paid from the money collected by means of taxes levied upon the people. In other words, reducing the debt meant collecting money for that purpose and instead of paying the bonds putting the money in the Treasury and then deducting the liabilities from it. So the "debt, less cash in the Treasury," did grow less by just as much as the money collected and kept as a surplus increased; but no bonds were paid, and so the benefits were to the tax-paying public, and the circulation was being constantly contracted to the extent to which surplus funds accumulated. That eminent financier, Mr. Micawber, when he gave a note to his importunate creditor was wont to say, "Thank Heaven, one more debt is paid." The reduction of the national debt by the Democratic administration was akin to Mr. Micawber's payment of his debts.

It was not until a combination, a conjunction so to speak, of important circumstances occurred that that policy was changed. The one was the introduction of a resolution on the subject in the House of Representatives, the second was the speech of the Senator from Kentucky [Mr. BECK], and the third was the sinking fund. The time had come when, if the law was to be carried out at all, if its positive provisions were to be respected, the money had got to be taken out of the Treasury for the purchase of bonds for the sinking fund, and so it happened that after carrying on this policy of discharging the public debt by piling up the people's money in the Treasury from the 4th day of March to the 29th of December, 1885, a call—the first one—was issued for bonds. At that date there was a surplus in the Treasury outside the legal-tender redemption fund of over $80,000,000. Public opinion had become somewhat aroused and the administration found that there was something else besides contention for place which the people were interested in, and that one of them was the payment of the national debt out of the surplus funds in the Treasury.

Since the first bond call, brought about as I have stated, payments have been made with fair alacrity, though at least $75,000,000 more should have been paid.

Now, Mr. President, the people of the United States pay their money into the Treasury in the discharge of their legal obligations to the Government, but the Government does not thereby become the owner of that money. It is simply the trustee of it for the public use; money was made to be used, and it is a perversion of the high functions of administration for the Government to collect money from the people which it does not at the earliest and speediest possible moment pay out again in order that the people may have it for the uses for which it was created.

More than that, a great sum of money in the Treasury subject to the demands of Congress is a temptation to unwise legislation. There has been experience of it heretofore, and there will be abundance of it hereafter. The safest and the wisest thing is to put the cash in the Treasury down to as low a notch as possible consistent with safety, and thereby remove the temptation to extravagant appropriations which always exist where there is an overflowing Treasury.

When there is a surplus of money in the Treasury it is because the people who supply this money are being deprived of its use. Who is willing to commit to the Secretary of the Treasury the power to say what the volume of currency shall be, how much money the people shall have for use? Unfortunately Secretaries of the Treasury have been too much disciples of that school of finance which believes that the volume of currency is of little or no consequence so long as the banks are satisfied, that one dollar will perform as useful and proper and complete an office as a thousand. The people of the United States do not believe that. Whenever they have had the power to express their views they have said that they believed in an ample volume for the transaction of business. They know that among men of small means and in times of scarcity the chance for each one of them to have some portion of the money going is increased by as much as you increase the volume. Scarce money means cheap property. There is the $1,600,000,000 of gold and silver coin, and legal-tender and national-bank notes performing the uses of currency, outstanding.

The property values of the country amount to $50,000,000,000. To increase the value of the currency means to decrease the value of the property of the country in equal proportion. Dear money and cheap property mean the distress of the people. The resolution as it came from the House, while better than if amended as proposed by the Finance Committee, does not go far enough in the direction of requiring the payment of the public debt from the surplus funds in the Treasury. It is chiefly valuable because it denies the right of the fixed capital of the country to control the financial policy of the Government. It is as against its active industries, against its current business, against its flesh and blood. This it now does by its control of the Treasury Department, and this the resolution, asserting the power and duty of Congress, overturns, which is of more consequence than the putting in circulation of the Treasury surplus.

As I said, we shall have from ninety to one hundred millions this year beyond the current obligations of the Government if we are to judge the future by the past. The Treasury will pay, if left alone, only so much as is required by the operation of the sinking fund, which is only forty-six or forty-seven million dollars. Is it a question, I ask you, which should be settled by the discretion of one man? Is not the question of what shall be money and of its volume a legislative and not an administrative question?

I do not think that I am lacking in ordinary hopefulness. I know my disposition is to look at the bright side of everything. But unless something occurs totally out of the range of ordinary probability very soon the American people will feel the pressure of hard times grown harder. Neither will this condition of things prove temporary.

If the volume of the currency is diminished, and if thereby what remains is increased in price, not only is the value of the property of the country diminished in an equal percentage, but what is even worse, the value of the debts of the country, of the mortgages upon every home, and of the bonds of every city, every town, every township, every county, and of every railroad, amounting in the aggregate to more than $10,000,000,000, will be proportionately increased, and as their value increases the ability of the makers to pay will be equally diminished. Add 10 per cent. to that value and see what the difference is. It is the difference between individual and municipal bankruptcy and municipal solvency in many cases.

Apart from this, as I said a moment ago, is the question of the two contending forces, the fixed capital, the money of the country, against its production. It is the fight for gold against silver; it is the fight for gold against greenbacks; the gold that can be cornered, because it haunts the cities and is the money of the few, and can, therefore, easily be made both scarce and dear, against the silver and the greenback, which are dispersed throughout all the land, performing their offices, small individually but enormous in the aggregate and beyond the reach of combined capital to touch.

I am in favor, independent of all questions of the money in the Treasury, of telling the Secretary exactly what the Legislature means the policy of this country shall be upon this most important question. I am in favor of taking that discretion which he has now and which he insists we shall leave with him away from him, and let the people who elect their representatives to this body and to the House say what from time to time the interests of the country require.

Deficiency Appropriations.

SPEECH

OF

HON. LOUIS E. McCOMAS,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 2, 1886,

On the report of the conference committee on the disagreeing votes of the two Houses on amendments to the deficiency appropriation bill.

Mr. McCOMAS said:

Mr. SPEAKER: In the closing hours of this session I do not wish to make a speech, but I desire to make a brief review of the failure of "retrenchment and reform" under a Democratic President and House of Representatives.

Two months ago I reminded this House and the country that the estimated revenues for 1887 were $315,000,000, and the estimated postal revenues for 1887 were $47,542,252, making the total estimated revenues for 1887, $362,542,252. I then predicted that the total appropriations by this Congress for 1887, together with the permanent annual, would exceed $384,850,332.62. I therefore predicted a deficit of $22,000,000 between estimated revenues for 1887 and the actual appropriations for 1887.

The estimated revenues were the only official statement which no one could controvert.

But gentlemen on this floor promptly corrected my prediction that the permanent annual appropriations, as increased by the regular annual appropriations of this Congress, would exceed $384,850,332.62.

The Post of this city, the New York Star, the reputed organ of the administration, and other Democratic papers declared that I had overstated the amount at least one hundred and sixty-eight millions.

Somebody had made a gross blunder. I did not blunder.

I now reiterate my statement, that the total appropriations for 1887 will exceed $384,850,332.62. The table I append to my remarks shows that the regular annual appropriations which have passed both Houses for 1887 aggregate $264,783,579.59.

The total permanent annual appropriations, as reported by the Treasury for 1887, are $118,910,955; therefore the total actual appropriations for 1887 are $383,694,534.59. If the fortification bill had passed from one to six millions would have been added to this total. Thus my prediction has been verified. It was a remarkably accurate forecast of the anticipated extravagance of the party now in power. The permanent annual appropriations include the sinking fund, the interest on the public debt, and expenses of the customs service, which are regulated by permanent law.

It is the regular annual appropriations which indicate the increasing prodigality and the falling temperature of Democratic retrenchment and reform. If you scan the tables I append it will appear that the total of regular annual appropriations for 1884 was $231,993,647.63, for 1885 was $195,710,588.09, for 1886 was $219,595,283,18, and for 1887 is $264,783,579.59.

But enormous as is the increase of appropriations for 1887 it falls far short of the demand for money made by this administration.

The heads of Departments, united, estimate that their needs for 1887 are $293,676,129.36. We are warned by these estimates that next winter we may find huge deficiencies in nearly every Department.

The same warning we now have in the enormous deficiency bills for 1887, aggregating $13,950,880.87.

Keeping pace with these extravagant estimates of the Departments and with these lavish appropriations we find an increase of offices and of salaries. Can gentlemen on the other side of this Chamber deny this charge?

I can prove it by the record. But I have a shorter method. Hear the distinguished Democratic leader from Indiana [Mr. HOLMAN], whom you will not heed.

On August 2 (RECORD, page 7867) he made a statement which no man on this floor attempted to confute. Said he:

> But, Mr. Speaker, I rose for another purpose. I hope the House will not consent to go any further this session in increasing the number of public employés. Gentlemen will be astonished when they come to look at the list of new offices created by this Congress. They will find that it is almost without precedent since the close of the war, or at least since the 4th of March, 1873.
>
> The list is much larger than gentlemen who have not kept a vigilant watch of the record apprehend. And yet no increase in the public employments ought to have occurred.

Such is the record of the Democratic effort at retrenchment and reform.

The present Congress met when there was a strong public sentiment in favor of prompt and liberal outlay for the defense of our seaports, a sentiment admirably expressed by the letter of Mr. Tilden, the distinguished citizen who has just passed away. Congress already had a remarkable mass of information to guide it in legislation. It had, in the first place, the very elaborate report of the gun-foundry board, representing years of the labor of experts. It had the reports of the House select commission on ordnance and gunnery, sometimes called the public-defense commission, and the Senate's Select Committee on Ordnance and War Ships, both representing months of labor in taking testimony and in visiting foundries and navy-yards, by some of the ablest men in Congress. It had the very elaborate report of the board on fortifications and other defenses. Finally, on the subject of heavy guns and harbor-defense batteries, it had the important report of the House Naval Committee. Perhaps there never has been in any Congress such a collection not only of documentary evidence as to the needs of our coast defense but so specific a statement of the precise method of beginning the work and the exact appropriations required. But more remarkable still, if possible, has been the substantial unanimity of these reports in describing the foundation work needed for providing heavy guns and impregnable forts.

The Senate wanted to begin at once; this House did not. It interposed a bill which was a cruel disappointment to the country. It would have been more frank to appropriate in lieu of the House bill a petty sum for the purchase of lawn-grass seed, climbing ivy, and roof moss, to make more pleasing to the eye of strangers who sail into our harbors our dismantling and defenseless fortifications.

The President laboriously vetoes a few individual pension bills but promptly seconds the multitudinous efforts of this House to pass a huge river and harbor bill. He has just signed it. These things consume much time, and within a few hours we will adjourn without a fortification bill. Come, let us go home, that the people may consider these things.

APPENDIX.

History of the fourteen regular appropriation bills, 1886–'87.

a. Fifty per cent. of the amounts appropriated for the District of Columbia are paid by the United States. The amount for the water department (estimated for 1887 at $183,483.02) is paid out of the revenues of that department.

b. The appropriations for the postal service are paid out of the postal revenues (estimated for 1887 at $47,542,252.64), and any deficiency in the revenue is provided for out of the Treasury of the United States.

c. This is the estimate submitted for 1887. "The amount that can be profitably expended," as reported by the Chief of Engineers, is $42,332,100 (Book of Estimates, page 178).

d. This amount covers deficiency estimates submitted in House Executive Documents Nos. 62, 70, 176, 210, 225, 233, 270, 275, 280, and 294, and Senate Executive Documents Nos. 213 and 218, first session Forty-ninth Congress.

e. The estimates for increase of the naval establishment are included in the general estimates for the Navy for 1887.

f. This amount is estimated.

g. In addition to this amount for pensions for 1884–'85, an unexpended balance of appropriation, estimated at $66,000,000, was reappropriated and made available for that fiscal year.

h. In addition to this amount for pensions for 1883–'84, an unexpended balance of appropriation, amounting to $39,000,000, was reappropriated and made available for that fiscal year.

j. No appropriations were made for rivers and harbors for the fiscal years 1883–'84 and 1885–'86.

k. This amount is based upon laws approved and printed up to July 31, and bills which have passed both Houses.

I have here a statement of the permanent appropriations of the Government, including the sinking fund, and I will ask the Reporter to include this in what I am saying.

The statement referred to is as follows:

Permanent and indefinite appropriations for the fiscal year ending June 30, 1887.

Smithsonian Institution	$42,180 00
Collecting customs revenue	5,500,000 00
Collecting customs revenue (additional)	750,000 00
Equipping the militia	200,000 00
Return of captured and abandoned property	20,000 00
Sinking fund	46,659,000 00
Interest on public debt	44,622,589 00
Interest on Pacific Railroad bonds	3,877,410 72
Salaries and expenses steamboat inspectors	255,000 00
Salaries and expenses inspectors foreign steam-vessels	35,000 00
Refunding national banking associations excess of duty	200 00
Promote education of the blind	10,000 00
Internal-revenue drawback	40,000 00
Internal revenue (refunding illegally collected taxes)	35,000 00
Internal revenue (refunding moneys erroneously received)	200 00
Internal-revenue redemption of stamps	50,000 00
Marine Hospital establishment	450,000 00
Detention and prevention of frauds on customs	50,000 00
Regulating immigration (Customs)	200,000 00
Expenses shipping service	60,000 00
Unclaimed merchandise (Customs)	1,000 00
Repayment to importers excess of deposits	4,000,000 00
Debentures or drawbacks, bounties or allowances	8,500,000 00
Debentures and other charges	300 00
Refunding duties on goods destroyed (Customs)	500 00
Refunding moneys erroneously received and covered (Customs)	200 00
Soldiers' Home	300,000 00
Transportation of the Army and its supplies, Pacific railroads (War)	900,000 00
Ordnance material, proceeds of sale (War)	75,000 00
Constructing Mississippi jetties (War)	150,000 00
Operating and care of canals and other works of navigation	200,000 00
Removing sunken vessels	30,000 00
Ordnance material, proceeds of sales (War)	2,500 00
Sales of small-arms	5,000 00
Prize-money to captors	7,000 00
Indemnity to seamen and marines for lost clothing	3,000 00
Deposits by individuals for surveying public lands	400,000 00
Indemnity for swamp lands to States	50,000 00
Refunding money for lands erroneously sold	75,000 00
Maryland Institution for Blind	5,000 00
Five, 3, and 2 per cent. funds to States (Lands)	200,000 00
Miscellaneous	275 00
Mail transportation, Pacific railroads (Post-Office Department)	1,000,000 00
Supervisors of elections	100,000 00
Salaries of retired judges	42,000 00
Salary and expenses, reporter Supreme Court	7,500 00
Total permanent and indefinite	118,910,955 00
Deduct sinking fund	46,659,000 00
Permanent appropriations exclusive of sinking fund	72,251,955 00

Protecting the Public Lands.

SPEECH

OF

HON. THOMAS RYAN,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 28, 1886.

The House having under consideration in Committee of the Whole the amendments of the Senate to the sundry civil appropriation bill, and specially an amendment to reduce the appropriations for protecting the public lands from depredations—

Mr. RYAN said:

Mr. SPEAKER: The proposition made by the gentleman from Indiana is a most extraordinary one. In all my service in Congress I do not recall an instance when a proposition was made on a disagreement of votes between the two Houses to raise the appropriation above the higher amount. The House agreed upon $90,000 as the proper sum——

Mr. HISCOCK. Is it claimed that amendment is in order? Of course it is not in order.

The CHAIRMAN. The gentleman from Kansas [Mr. RYAN] has the floor on the amendment.

Mr. RYAN. Whether it is in order or not it seems to me most extraordinary. It never has been done by Congress so far as I know before, except that perhaps in one instance it was done in a conference committee, and then, if I recollect aright, it was denounced very bitterly, and very properly, I think, by the gentleman from Indiana [Mr. HOLMAN].

In this case, as I have said, the sum agreed upon by the House was $90,000. After an exhaustive discussion in the Senate the amount was reduced to the sum named in the Senate amendment, namely, $75,000.

The sum agreed upon by the House has been found sufficient for the public service in past years, and a large force during all these years has been employed for the purpose of detecting frauds in the public-land entries. The result of that has been to prevent very largely for the last few years any of these frauds being committed. Nearly every fraud upon the public lands that rises to a point higher than some technical error in proving up occurred mainly prior to the organization of this system of detecting frauds. Nearly every part of the public domain

that has been irregularly taken has been gone over by these detectives and reported upon.

I think it will be found that the Department to-day has information of every important fraud upon the public domain. There is really no necessity for more than a nominal force, and that is needed mainly for preventive purposes. Yet I shall not object to the House proposition. I am willing to maintain the necessary force. I am not asking for a reduction of the force. But, Mr. Chairman, for several years past we have made appropriations for this purpose. We reached the maximum, I believe, last year, $90,000.

The gentleman from Indiana [Mr. HOLMAN] tells us that the former Land Commissioner, Mr. McFarland, asked for $300,000. So he did, but we gave him only $90,000, and we gave him an all-sufficient sum, and I do not remember to have heard the voice of the gentleman from Indiana in this House at that time calling for more money for that purpose, although there was more occasion for it then than there is now. A force has been employed for years in the business of unearthing these frauds, and, as I have already said, there remains now but little use for a detective force; it is needed more for preventive purposes than for any other. In the face of the machinery that has been organized to prevent frauds upon the public domain there have not been for some time any serious frauds committed of which I have any information.

In years past when these frauds were flagrant those who are now pressing this extraordinary motion in violation of all precedent and against orderly methods of legislation, were either silent or hostile when appropriations for this purpose were before the House. They have persistently, and that too after the danger is largely past, become tenderly solicitous touching these frauds.

When this proposition was before the House a few days ago the gentleman from Pennsylvania very plainly intimated that the purpose of an increase of this appropriation was to make provision for hungry office-seekers. The gentleman was then, as always, frank and courageous in protecting the Treasury from the greed of the hungry horde. I will not say that the increase here asked for is for any such purpose, but the conduct of those who are pressing it is so at variance with their conspicuous attitude toward similar appropriations in the past that the honorable gentleman from Pennsylvania does not appear to have done serious injustice in making the declaration. It is urged upon us that the Commissioner of the General Land Office asks Congress to give him $300,000 to expend for this purpose. They ignore the fact that in the first six months of the present year he only expended about $30,000 of the $90,000 that Congress placed at his disposal for that purpose.

If the frauds upon the public domain were so enormous, why did he expend but $30,000 in protecting the public lands in the first six months of this year when he had $90,000 in his hands for such use? Doubtless there have been frauds upon the public lands as there have been frauds upon the revenues, the currency, and in the public expenditures. So long as human nature remains imperfect so long will there be violations of law. But there has been a persistent effort to magnify the public-land frauds. For years a corps of detectives, commonly called "special agents," have been employed at enormous cost to the Treasury for the purpose of finding such frauds. Some of them are doubtless good men; others are known to have been infinitely worse, if possible, than any of the land thieves. They seem to have been impressed with the idea that their employment depended upon their finding frauds somewhere.

Their ears were open to rumors most vague and all manner of malice, detraction, and slander, and these were formulated into reports until the Land Office became flooded with recitals of gigantic frauds so universal as to apparently embrace the entire occupancy of the public lands by settlers during the last six to ten years. Undoubtedly some real frauds were embraced in these reports; but that in the main they are gross exaggerations ought to be apparent to all who have any knowledge of the character of that class of our people who go upon the public lands to secure homes.

The very utmost limit of injustice was reached when the administration issued this order to the registers and receivers of the local land offices of the United States:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., April 3, 1885.

Registers and Receivers, United States land offices:

GENTLEMEN: Final action in this office upon all entries of the public lands, except private cash entries and such scrip locations as are not dependent upon acts of settlement and cultivation, is suspended in the following localities, namely:

All west of the first guide meridian west in Kansas. All west of range 17 west in Nebraska. The whole of Colorado, except land in late Ute reservation. All of Dakota, Idaho, Utah, New Mexico, Washington, Montana, Wyoming, Nevada, and that portion of Minnesota north of the indemnity limits of the Northern Pacific Railroad and east of the indemnity limits of the Saint Paul, Minneapolis and Manitoba Railroad.

In addition, final action in this office will be suspended upon all timber entries under the act of June 3, 1878, also upon all cases of desert-land entries.

Very respectfully,

W. A. J. SPARKS, *Commissioner.*

By that order the entry of every settler upon the public lands in half of the State of Kansas, more than half of the State of Nebraska, all of Colorado, Dakota, Idaho, Utah, New Mexico, Washington, Montana, Wyoming, Nevada, and a large part of Minnesota, was suspended. Every timber and desert-land entry everywhere was suspended. It is safe to say that more than a million of humble homes were seriously affected by that order; more than a million titles to *bona fide* homes of sturdy pioneers were by that official act branded with suspicion and covered with a cloud. The proverbial rugged honesty of these settlers, their long and tedious hours of toil, their almost indescribable privations ought to have secured for them at the hands of this Department something better than an indiscriminate arraignment as public land thieves. However pure and honorable may have been the motives that gave existence to that official act, the effect has been almost unparalleled in our country for outrage and cruelty; and it is much to the credit of the honorable Secretary of the Interior that when finally, after the lapse of about one year, the injustice of it was brought to his attention he promptly canceled it. That official act recognized dishonesty as the rule among those who settled upon the public lands.

If we may not look for honesty as the rule among the brave and sturdy men who go in advance of civilization upon the public lands to build up homes for themselves and their families, who have carved out of our vast domain since the formation of our Government twenty-five of the grand and mighty States of our Union, I fear we shall look in vain for it elsewhere. If the implications of that order be true, then indeed is there no hope for the Republic, for no longer can there be among our people anything but corruption. Every fair-minded man will regard this monstrous imputation against millions of Western pioneers as unmitigated slander. I would not for one moment allow myself to doubt that in the discharge of his official duties the Commissioner of the General Land Office is actuated by an honorable zeal for the public good, but his methods are too often erroneous and mischievous.

The motion should not prevail.

Bogus Butter.

SPEECH

OF

HON. JAMES BUCHANAN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 29, 1886.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 8328) defining butter; also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. BUCHANAN said:

Mr. CHAIRMAN: If the proposed amendment stood alone upon its merits, disassociated with any other legislation, I would be disposed to favor it, but the difficulty is that it is proposed as an amendment to a bill to which it is not germane, and the only effect of its adoption must be to further endanger the passage of this bill. Therefore, whatever may be the conviction of the House upon the abstract correctness of the proposition embodied in the amendment, I hope it will be voted down in the interest of the success of this bill and let it come up hereafter as a separate measure and each proposition be disposed of on its own merits. [Applause.]

Mr. HAMMOND. Will the gentleman yield to me for a question?

Mr. BUCHANAN. Certainly.

Mr. HAMMOND. If we can dispense with the tax on tobacco and can not get it dispensed with in this bill, why do you wish to impose any more taxation by this bill?

Mr. BUCHANAN. Have I indicated any such purpose?

Mr. HAMMOND. What is your intent in voting for this bill?

Mr. BUCHANAN. I intend voting for this bill——

Mr. HAMMOND. But not for the purpose of raising revenue?

Mr. BUCHANAN. My motives are my own, I say in all courtesy.

Mr. HAMMOND. I ask you whether you had a motive which you would avow.

Mr. BUCHANAN. I have said my motives are my own. My acts belong to my constituents. For neither, I beg to say, am I responsible to the gentleman from Georgia. But I am perfectly willing to avow my motive.

Mr. HAMMOND. Really I would like to hear it.

Mr. BUCHANAN. If I had some minutes of time in addition to what the rules give me I would offer facts and suggestions which would amply justify voting for this bill, and trusting to the generosity of the House I will take a few minutes for this purpose.

We hear much in this Hall of the great manufacturing, mining, and mercantile interests of this country. They are of great importance, and rapidly growing in importance and extent. But the agricultural interest exceeds in extent and value all of these. That interest is now in a state of great and unusual depression. All over our land the farmers are suffering as for many years heretofore they have not suffered. Many of them own lands purchased in the period of high prices and bearing mortgages, which with the falling of values represent in many instances

only the present selling price of the lands, the value represented by the part of the consideration paid having disappeared by the depression, but the mortgages, of course, remaining at the original amount.

Owing to the competition of the fertile prairies of the Northwest and the Valley of the Mississippi and the reduced railroad charges for transportation, the farmer of the East finds it impossible to produce his former staples—wheat and corn—except at an actual loss. His foreign market for breadstuffs is being supplied from the wheat-fields of India, tilled by labor paid less than 10 cents per day, and all that he produces has declined very greatly in price, while the cost of production has not lessened, but has in many directions actually increased.

Taxation, too, bears heavily upon him. A rate that in the times of high prices and an abnormal volume of currency was but a slight burden, now represents a far larger number of bushels of grain or tons of hay. State extravagance, local improvements, and official mismanagement have left a direct tax which bears hardly upon him. To the legislator it may seem small, but to many a farmer it represents the sacrifice of some hoped-for comfort or convenience for himself or family. We hear much of the comfort and independence of the American farmer. Born and reared upon a farm and living thereon for twenty-four years, mingling daily with those engaged in this avocation, and thus having personal knowledge of what I say, I say that much of that comfort and independence exists only in the imagination of writers who know of farm-life only from the outside; who see only the green fields, the waving grain, the golden harvests, and do not see the hours of severest toil, long as the long, hot summer day; the anxious thought about interest, taxes, and bills for machinery and the like; the despair over blighted crops, and the corroding care bred by debts which can not be promptly paid.

This interest demands our most serious attention. The farmer has seen Legislature after Legislature come and go. He has seen Congress after Congress assemble and adjourn. He has seen law after law enacted in the interest of railroads and banks and other aggregations of capital, and, believing that the enhancement of every material interest must result in the common good, he has not complained. He now comes here and asks this bill at our hands. Agricultural societies, granges, and other organizations of farmers, almost without number, are here by representative or petition asking that measures may be taken by which they may be assisted in ferreting out and branding a fraud. I warn this House not to refuse their prayer. In honesty we can not refuse it. In justice we ought not.

Some years ago a Frenchman, M. Mége, discovered that from the fat of animals an article could be extracted which resembled butter in taste, though not in color. Acting upon this hint, some capitalists in this country commenced the making of artificial butter. They claim that they use only sound, healthy fats and wholesome processes, but unfortunately for them some of them were so eager to enjoy a monopoly of their processes that they have taken out patents for them. Those patents are public records. They speak louder than the interested circulars now put forth. Patent No. 148768 is for a "substitute for butter," consisting "of a base of yelk of eggs, butter, and milk, agitated in a zinc vessel that has been coated with a solution of niter."

Patent No. 266777 uses cotton-seed oil or other vegetable oils treated with a solution of caustic soda in combination with farinaceous flour which had previously been thoroughly cooked in suet-water.

Patent No. 301782 says:

> The process consists in first forming a soap emulsion of the fats or fatty oils with caustic soda, then precipitate the lye, then apply chlorinated alkaline lye or chlorinated gas to the soap emulsion as described.

Another patent granted to N. I. Nathan, of the firm of N. I. Nathan & Co., manufacturers of butter and oleomargarine, for a process of making artificial butter, describes the process used by said firm in the manufacture of their butter substitute It says:

> The lard which has passed through the sieve is then subjected to the action of cold water, to which has been previously added and thoroughly stirred a quantity of borax and nitric acid, about in the proportions hereinafter specified. By treating the lard in this solution, composed of water, borax, and nitric acid, the effect is to further cleanse the lard and make it partake of or assume a clear white color, free of all odor, and almost perfectly tasteless. After being subjected to this treatment, the mass is removed and thoroughly rewashed in cold water, preferably in a separate and distinct vessel from that previously employed, whereby the product becomes a purified or deodorized leaf lard, its characteristic being that it is of a beautiful color, a clear white, perfectly odorless, remarkably solid, and free from the disagreeable taste usually present with lard. Arriving at this stage of the process, a certain minute quantity of nitric acid is added to the water, and incorporated with a certain quantity of the purified or deodorized lard to further strengthen the solution, and this mode of treatment and addition of nitric acid are continued as mass after mass of the purified or deodorized lard is prepared, the operation being continued until the product assumes a clear white color, void of odor and taste. The product thus obtained is mixed with oleomargarine, which is then a commercial article and readily obtained in the market, and when all is thoroughly mixed the mass is subjected to heat, &c.

Rancid fats, with decay arrested and odor washed away by nitric acid, may be used under this formula, but no removal of odor can restore nutritive qualities to partly decayed fats.

Patent No. 236483 describes another process of making artificial butter, as follows:

> I first separate the oleine and margarine from the stearine by any known method, for example, by mincing and melting the fat and then pressing it in bags of open texture. I next place the oleomargarine thus obtained with an alkaline solution, preferably in the following proportions: to 80 pounds of oleomargarine 20 pounds of water and 8 ounces of bicarbonate of soda. I next agitate the oleomargarine and the alkaline solution together until the oil globules of the former are thoroughly mixed with the alkaline solution and partly saponified by the action of said alkali. I then add to the oleomargarine thus partly saponified a small quantity of nitric acid, preferably in the proportion of 1 dram to every 100 pounds. This gives to the article such a fine flavor that even an expert can scarcely distinguish it from excellent dairy butter.

Mark the words, "that even an expert can scarcely distinguish it from excellent dairy butter." He then goes on:

> Of course the butyric acid thus added may be varied to suit the requirements of each particular article or the tastes of certain classes of purchasers. This process, as above described, avoids the use of milk, and consequently the use of caseine.

It only remains to make this villainous process clear to add that "saponified" means grease converted into soap, and that "butyric acid" is described by Webster as "an acid found in butter; an oily, limpid fluid having the smell of rancid butter and an acrid taste, with a sweetish after-taste like that of ether."

Letters patent No. 145840 use with other things sulphuric acid (oil of vitriol), tallow, and alum.

Other patents show that among other drugs and substances used in the different processes of making artificial butter may be found nitric acid (commonly known as *aqua fortis*), chlorate of potash, peroxide of magnesia, nitrate of soda, caustic potash, chalk, oil of sweet almonds, stomach of pigs, sheep, and calves, cotton-seed oil, alum, cows' udders, carbolic acid, bromo-chloralum, and caustic soda.

The product of these processes is being manufactured and sold in large quantities in the place and stead of butter, and under the pretense of being butter. This began about the year 1876. It has increased until reliable estimates now give the amount of oleomargarine and bogus butter products at Chicago alone for the year past at 18,000,000 to 20,000,000 pounds, and in the whole United States for the same time at 32,000,000 to 35,000,000 pounds. In 1876 we exported of this stuff $70,483 in value. In 1885 the amount rose to $4,451,632.

State legislation has proved ineffective in stamping the true character of this compound upon its packages. By one evasion or another it has succeeded in palming itself off upon an unsuspecting public as pure butter and at the price of pure butter. It is this fraud which the agricultural interests complain of. If bogus butter were made as such, sold as such, at oleomargarine prices, and eaten knowingly as bogus butter, no complaint would be made. It is the fraud which should be suppressed. This bill does not touch oleomargarine when made and sold as such. It is only when it is made or sold in imitation of butter, or as and for butter, that the bill applies to it. Can any one complain of this?

If any one wants to put pure oleomargarine, made of the best of materials and by the most cleanly of methods, but with its natural, marble-white color and insipid taste, into his mouth, this bill does not forbid him; but when stale drugs and deleterious substances are put into it, and it is fixed up to resemble or become a fraud upon good, honest butter, then this law steps in and says it must then bear its true character, and then if still any one wishes to try experiments with his health by eating it, after knowing what it is, he may do so.

We have been favored with numerous remonstrances from the boards of trade of Chicago and other cities against the passage of this bill. Among other things they urge that oleomargarine makes a cheap substitute for butter for use by the poor. Several answers to this may be given. First, oleomargarine is not a cheap substitute. The greater part sold in this country is sold as butter and at butter prices, and the poor man really pays butter prices and gets the cheap substitute. The man of more means can buy his butter by the tub and be certain of the article. The one who must buy by the pound or the half-pound is at the mercy of the retailer's honesty. Second, no poor man desires to make, as has already been remarked, "a drug store of his stomach." His hard toil requires pure, sustaining food, not a mixture of "saponified" grease, oil of vitriol, and *aqua fortis*. Third, if he does really desire the cheap substitute, he can under the operation of this bill obtain it just as readily as now, the only difference being that he will obtain it without coloring matter and knowing exactly what it is, and without paying one cent of tax.

Since when has the Chicago Board of Trade become so solicitous about the poor man's food? It is well known that without the slightest compunction the gamblers in futures upon its floor will combine and put up the price of wheat, or corn, or pork, that thereby they may fatten at the expense of any one who has a family to feed, and without any advantage accruing to the producer. The solicitude of these speculators for the welfare of the poor man is as novel as it is insincere.

View this question as I may, either as one of political economy, as one of abstract justice, as one of honesty and fair dealing, or as one of expediency, I must vote for this bill.

Agriculture lies at the base of all national greatness. From the ranks of that avocation have come some of our ablest statesmen, our most enterprising business men, our leaders in thought and intellect. Its ways are ways of peace. Its associations are such as to lead to solidity of character and earnestness of endeavor. Whatever tends to protect this interest tends to render more certain the perpetuity of this Republic and to enhance her usefulness and greatness.

Forfeiture of Northern Pacific Land Grant.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 26, 1886.

The House having under consideration the bill (S. 2172) restoring to the United States certain of the lands granted to the Northern Pacific Railroad Company to aid in the construction of a railroad from Lake Superior to Puget Sound, and to restore the same to settlement, and for other purposes—

Mr. OATES said:

Mr. SPEAKER: In the limited time given me by the gentleman from Minnesota [Mr. STRAIT], for which, however, I am very grateful, for it is all he has, I can not enter upon the question of the policy of grants of land for the construction of railroads or the history of this particular grant. Therefore I will proceed to discuss first the nature and character of the estate granted, and secondly whether it is forfeitable, and if so, to what extent.

It is conceded on all hands that this is a grant of an estate upon condition-subsequent. There has been some contrariety of opinion as to its character, and it may be said in a certain sense that it was not that kind of a grant, because there was an attempt in the act making the grant to substitute some other remedy than the common law remedy of forfeiture by re-entry; and if that had been successful it would, as every lawyer knows, or ought to know, have changed the character of the grant. But the attempt at substitution providing for the Government to repossess the land for conditions broken, and proceed to adopt any method it might deem proper to secure the speedy construction of the road, when pursued to its logical consequences, goes back to the same thing as though no such provision had been inserted; because when the title is resumed by the Government there is no power, no prior engagement, attempt to dedicate, or anything that can compel the Government to dispose of that land except as it pleases. Therefore the attempt to substitute another remedy has substantially and practically failed.

This, therefore, stands as a grant upon conditions-subsequent. Mark the difference between it and a grant upon condition-precedent. I note a distinguished Senator at the other end of the Capitol contended the other day that this grant was made upon conditions-precedent. Now, if that be true, and all of the conditions were not performed, under the rules of common law the title would not have vested at all in the railroad company as grantees. But we find incorporated in this grant section 4, which changes that common-law rule, because it provides that whenever the grantee performs by building sections of 25 miles of the road in the manner stipulated for the contract *pro tanto* is fulfilled and the title to the lands coterminous at once vests in the grantee. And under the decision of Van Wyck and Knevals read by the gentleman from Mississippi [Mr. VAN EATON], the Supreme Court has already adjudged that question; they have held that the lands coterminous, whether patented or not, belong to the company whenever the road is constructed and accepted in the method which the grant itself prescribes—the condition is then performed as to those lands and the contract *pro tanto* executed. This section 4 makes the contract several and destroys the idea of entirety, which is repugnant to a grant on conditions-precedent.

If that clause was not in the granting act, then if each and every one of the conditions were not performed, if a single one of them was omitted, the conditions being conditions-precedent, the whole thing would fail and the company would lose all the lands. But such a construction is not maintainable. The very language of the grant shows to every legal mind, it seems to me, that this grant is upon conditions-subsequent, and in that I am in accord with the Committee on Public Lands of this House, for they treat them as such. I am in this construction sustained by the Supreme Court in Repentigny's case in 5 Wallace, and Schulenburg and Harriman in 21 Wallace, and by that ancient but respectable authority, Blackstone by Cooley 1, pages 152–3, and by Minor, 2 Inst., 260–61, with no respectable or weighty authority to be found in the books to the contrary.

Now mark the difference between the two characters of estates upon conditions expressed. Wherever an estate is granted upon condition-precedent unless the condition is performed no title vests; but where the condition is subsequent the title vests the moment the grant is made, and it can be defeated only by the concurrence of two things—the failure of the grantee to perform the conditions and the action of the grantor, which is necessary to reinvest him with the title.

Now, no one can do this for the grantor. At the common law as between individuals, where the conditions were not performed, the grantor was obliged to re-enter, and the re-entry like an office judgment and by force of law, there being no room for controversy, reinvested him with the title. There is no statutory rule in this country regulating forfeitures of this character. The proceeding is under common law, except that under the decision of the Supreme Court in the Schulenberg-Harriman case this thing must be done by legislative declaration or judicial decision. We undertake to do it here by legislative action. In what case is legislative action good? It is only where the right is indisputable. Where it is a questionable right, one that is a fit subject of litigation and adjudication, it belongs to the judiciary and can only be determined there.

Mr. PAYSON. Will the gentleman allow an interruption?

Mr. OATES. Not unless I have more time given me.

Mr. PAYSON. I will give you a minute. My question is this: Could the Department of Justice institute proceedings to assert a forfeiture in a case like this, under the law as it stands, unless authorized by act of Congress?

Mr. OATES. That can be done only when there is some statutory authority therefor. It is necessary to give the court jurisdiction.

Mr. PAYSON. Then, in any event, it requires affirmative action by Congress.

Mr. OATES. It requires some action.

Mr. PAYSON. That is what I say.

Mr. OATES. Returning to the line of my argument, let me say that having determined that the conditions of this grant are subsequent I enter upon the second branch of the subject. I will refer to some of the subsequent legislation of Congress to see whether the Government is in a condition to assert a forfeiture to the extent recommended by the Committee on Public Lands.

The time, which is treated as one of the conditions, and properly so treated, expired on the 4th day of July, 1879. Now, what has been the condition of the company and what has been its history since that time? The original company when they undertook to organize and go to building the road did not have sufficient money to do it, and they applied to Congress for permission to mortgage their franchises and lands. They might have mortgaged the lands without any special permission; but, to make assurance doubly sure, they applied to Congress and the act of 1869 was passed, authorizing the company to make a mortgage on their franchise and lands. How did that operate? The company tried to raise the money in that way and on that security, but no one would advance it for the reason that the act did not give away the right of the Government as grantor to insist upon the right to re-enter and forfeit, but merely gave permission to mortgage without any condition. The company failed to raise the money on that mortgage, and in 1870, before a mile of the road was constructed, they again came to Congress, and Congress passed the joint resolution of May 31, 1870——

Mr. PAYSON. Will the gentleman permit me to interrupt him, for I know he desires to be accurate.

Mr. OATES. Certainly.

Mr. PAYSON. The act of 1869 did not authorize the company to mortgage its lands. The act of 1869 simply gave the company power to mortgage its franchises, its line of railroad and telegraph.

Mr. OATES. Does not the gentleman as a lawyer know that the company had a right to mortgage their lands without an enabling act?

Mr. PAYSON. No, sir, I do not; and they certainly did not have the right to mortgage their franchises.

Mr. OATES. It may have been necessary to give them authority to mortgage their franchises, but they certainly could mortgage all their right, title, and interest in the lands without legislation.

Mr. PAYSON. But the gentleman's point, as I understand it, is that the act of 1869 gave them authority to mortgage their lands, but that they could not get the money under that authority, and therefore they came again to Congress for the joint resolution of 1870. Now I am correcting the gentleman by showing that they did not have power, as they supposed, to mortgage their lands without authority of Congress, nor did the act of 1869 give them that power. It was not until 1870 that an act was passed giving them that authority.

Mr. OATES. The gentleman is right about the act of 1869; but I maintain that the company could without an enabling act have mortgaged their defeasable title to the lands. I will here print the material part of the joint resolution of 1870. It reads as follows:

That all lands hereby granted to said company which shall not be sold or disposed of or remain subject to the mortgage by this act authorized, at the expiration of five years after the completion of the entire road, shall be subject to settlement and pre-emption like other lands, at a price to be paid to said company not exceeding $2.50 per acre; and, if the mortgage hereby authorized shall at any time be enforced by foreclosure or other legal proceeding, or the mortgaged lands hereby granted, or any of them, be sold by the trustees to whom such mortgage may be executed, either at its maturity or for any failure or default of said company under the terms thereof, such lands shall be sold at public sale, at places within the States and Territories in which they shall be situate, after not less than sixty days' previous notice, in single sections or subdivisions thereof, to the highest and best bidder.

Mr. Speaker, the part of the act just read, in my judgment, gave away the rights of the Government to declare a forfeiture, to the extent that the company was permitted to construct the road and mortgage the lands. As an original proposition I would not have voted for that joint resolution, and I would not have voted for such a land grant in the first place. I care nothing for this railroad company. I have no connection with it and no interest in it whatever. I only desire to present this case according to my view of the law, and to ask that the House shall not proceed to pass something as a law which in my judg-

ment would be no law at all and accomplish nothing but protracted litigation.

Let me proceed to give a little more of the history of this company. Under the joint resolution they went to work mortgaging the lands and constructing the road, and they built it to Bismarck on the Missouri River, a distance of 530 miles. There that company failed—failed completely, with a bonded debt of thirty millions hanging over them.

A new company was organized which was composed largely of the creditors who had advanced their money in good faith, and they were given preferred stock in the new company for the thirty millions, the whole amount of the stock being, I believe, one hundred millions.

The new company set to work after the 4th day of July, 1879, when the time according to the terms of the grant for the completion of the road had expired, and went on building the road and built at least 1,500 miles of it, along which the House bill now proposes to forfeit all the lands granted to the company. Undoubtedly the Government had the right on the 4th day of July, 1879, to forfeit the lands all along the proposed line beyond and west of Bismarck, the point to which the road had been built, and it is perhaps true that the Government now has the strength to take the lands from the company by force; but, treating it as a judicial question, and as a question of common fairness as between individuals, I do not think the Government has any right to take those lands.

The gentleman from California [Mr. HENLEY] has stated the law correctly, in the case of a legislative grant the beneficiary under it must show affirmatively that the grant confers upon him the right which he claims, but there is another presumption of law in the same connection, and that is a presumption against forfeiture. An estate upon condition-subsequent is an estate already created, and the law requires that everything shall be done, and done strictly in accordance with the agreement, upon the part of the grantor, because the effect of forfeiture is to destroy the estate, and the presumptions of the common law are always in favor of maintaining estates.

Mr. HENLEY. If agreeable to the gentleman I will yield him five minutes of my remaining time, on condition that he will permit me to ask him a question.

Mr. OATES. Certainly; I will make that trade.

Mr. HENLEY. It is a good trade, because I shall not occupy with my question more than two minutes. I read from the decision of the Supreme Court of the United States, in the case of Farnsworth *vs.* The Minnesota and Pacific Railroad Company:

> But it is said that provisions for forfeiture are regarded with disfavor and construed with strictness, and that courts of equity will lean against their enforcement. This, as a general rule, is true when applied to cases of contract, and the forfeiture relates to a matter admitting of compensation or restoration; but there can be no leaning of the court against a forfeiture which is intended to secure the construction of a work in which the public is interested, where compensation can not be made for the default of the party, nor where the forfeiture is imposed by positive law. "Where any penalty or forfeiture," says Mr. Justice Story, "is imposed by statute upon the doing or omission of a certain act, there courts of equity will not interfere to mitigate the penalty or forfeiture, if incurred; for it would be in contravention of the direct expression of the legislative will.

Now, I ask the gentleman whether the Supreme Court in that decision does not declare the doctrine that while courts of equity will interpose and mitigate the rigor of the law in the case of a contract between individuals, that doctrine has no application in the case of a contract between the Government and an individual, because in the case between individuals one party may be allowed in a court of equity to say that the other party has been guilty of harshness or oppression; but this allegation can not be made in respect to a legislative act.

Mr. CASWELL. The rule is precisely the same in both cases.

Mr. HENLEY. The court in this case does not say so.

Mr. CASWELL. It does say so in 16 Wallace and 21 Wallace.

Mr. HENLEY. I have read from 92 United States Reports—2 Otto.

Mr. OATES. That does not affect the principle I was stating at all. I was stating the common-law rule. As a matter of course, if there be interpolated in a statute provisions contrary to that rule, the common law must give way and the statute must prevail. That is the character of the case you read from. That was a grant on condition-precedent, and of course no compensation could be decreed when the title had not vested.

Mr. CASWELL. And there are no terms of express forfeiture in the Northern Pacific grant.

Mr. HENLEY. And there is no decision of any court that requires such terms.

Mr. OATES. I must insist on going on with my argument.

Mr. Speaker, the Government permitted this new company to go on constructing its road and mortgaging the land under that joint resolution. And I say that while the Government is strong enough to do this thing, yet in equity and good conscience it ought not to do it. Why? I propose to give the reasons.

Mr. HENDERSON, of Iowa. What do you mean by saying "the Government is strong enough to do this thing," if it can not lawfully do it?

Mr. OATES. It may have the power to do it.

Mr. WARNER, of Ohio. Has it any power unless it has the legal right?

Mr. OATES. I have a very high idea of the power of the Government, because it suppressed a very large body of people, including myself, in the Southern States. [Laughter.]

Mr. HENDERSON, of Iowa. But we are now acting under civil law.

Mr. OATES. I am contending that the Government ought to act under the law, and that according to the principles of law it will not do this thing.

Mr. HENDERSON, of Iowa. Did you mean to say it could be done in the face of the decisions of the courts?

Mr. OATES. I maintain that the Government ought not to do it; that it can not legally do so.

Mr. GILFILLAN. Can the Government act in any other way than in accordance with the principles of law?

Mr. OATES. Well, I do not choose to follow that blue light off into the swamp; I want to pursue the line of my argument. But I will say that the effete dogma that the king can do no wrong is not entitled to a place in the lexicon of American statesmanship. This Government ought to set a good example to its citizens by itself obeying the law and performing its agreements.

I was about to state the reasons why in equity—and in many courts it has been so held as a matter of law—the Government ought not to declare this forfeiture as to the lands coterminous with the road constructed after the time expired. Time is not of the essence of the contract, because if it were it would convert the grant into one on condition-precedent. It could not be an estate on condition-subsequent. If time were of the essence of the grant the failure to perform the conditions within the time would of itself work a forfeiture, and your proceeding here would be nugatory and ridiculous.

Now, the company, as I was saying, proceeded to construct the road and to place mortgage bonds upon it to the extent of $25,000 a mile, with some additional second-mortgage bonds, until the aggregate is now nearly $70,000,000 of bonded indebtedness. Those bonds have been sold and are now in the hands of purchasers for value. The concluding part of the joint resolution not only authorized a mortgage to be placed upon these lands, but prescribed the mode and manner and even the notice to be given in case of a sale under foreclosure.

Now, the Government, having this right to declare a forfeiture for a failure to perform the conditions, when men came up and proposed to furnish money for the construction of the road by purchasing bonds, and the Government sanctions the proceeding and says, "Yes, the company may make the mortgage," and prescribes the method of executing and enforcing it, the right which the Government previously had to declare the forfeiture as to the constructed road and the coterminous lands covered by the mortgage is gone. Any act by the grantor inconsistent with the right claimed by the House bill was a waiver of that right according to all the law I have ever read on the subject.

Again, in the granting act, the Government obligated itself to survey the lands coterminous with the constructed road, for the purpose of conveying them to the company as they were needed for sale to aid in the construction of the road.

The United States failed to do that, and then by legislation on an appropriation bill compelled the company to pay for surveying the lands. This was a violation of the contract. In addition to that the Government obligated itself to clear the right of way for the company through all Indian reservations.

That is, the Government obligated itself to secure the right of way for the company through these Indian tribes or nations. It is shown in the minority report upon the testimony of Generals Brisbin, Gibbon, and Terry that up to about the time this road was required by the act to have been completed, the surveying parties sent out to survey and locate the road through the Yellowstone Valley had some members of their parties killed by the Indians. Furthermore, it is shown that these officers of the United States Army advised the surveying parties that they were unsafe in going out to survey the right of way for the company unless they had a guard much larger than could be furnished by them at that time.

In this connection, Mr. Speaker, let me say that wherever the condition-subsequent is impossible of performance, or where the grantor renders it impossible on the part of the grantee to perform it, or where the grantor takes away the means from the grantee of performing that condition, the condition is thereby dispensed with and the estate *pro tanto* becomes absolute. This is a well established principle of law.

Mr. BUTTERWORTH rose.

Mr. OATES. Let me complete this point. I will cite now the well considered decision in John C. Fremont's Mariposas case in 18 Howard. That was the case of a grant on condition-subsequent made by the Mexican Government to a citizen of California when it belonged to Mexico. It was afterward sold to John C. Fremont. He took it, of course, with the conditions attaching to the original grant. This Government succeeded to whatever rights Mexico had and declared it forfeited to the United States and took the property from Fremont for failure to perform the condition. That condition was to settle a certain

number of citizens on each league within a given time. Fremont brought suit, and the case was finally decided by the Supreme Court of the United States in his favor.

In that case the Supreme Court held that Fremont was entitled to the property because the country was so infested by hostile Indians as to render it impossible to perform the condition-subsequent except at the hazard of sacrificing the lives of those who settled upon the land. The law is not unreasonable enough to require the sacrifice of men to perform conditions-subsequent. When a condition is impossible to perform or, according to the doctrine of this decision, hazardous to human life, the grantee is excused from its performance and the estate becomes absolute.

When did the Government secure to the Northern Pacific Railroad Company the right of way through the Indian country? Look at the statutes. Here is an act passed in 1882 by the Forty-seventh Congress ratifying a treaty by which this Government secured to this company the right of way through the Crow Indian reservation. What is the history of it? When the company surveyed the road to the boundary line of that reservation and attempted to survey through it, did the Government go and open the way for them or secure to them the right which it promised? No; the Government not only did not secure to the company the right of way but the Indian agent drove off the surveying party, threatening them with the military. He would not allow them to enter within the boundary. The surveying parties had no right to enter in there, nor any one else.

This Government was the only power on earth which could secure the right of way. The company waited for the right to go on and build the road, and they did not secure that right until 1882. To attempt to forfeit the land because the company did not build it through this Indian reservation before July 4, 1879, when the right of way was not secured so as to allow even a survey until 1882, is something which no law and no equity on the face of the earth will sanction. Good conscience would not tolerate it for a single moment. No court in Christendom would decide in favor of requiring the performance of any such impossible condition on the part of any grantee when that condition was rendered impossible of performance by the grantor's failure to render the performance of the condition possible.

Under the treaty the United States agreed to pay the Indians $25,000 for that right of way. I have a certificate showing that the company promptly paid it, and went on to complete the road. Does this confer the right on the Government, in equity and good conscience, to forfeit these lands? The company built the road through there as soon as the Government made it possible for them to do it. That is all, it seems to me, there is of it, and the mere statement of the facts is enough to show that there is no right of forfeiture further than the Senate bill provides for.

Mr. WARNER, of Ohio. Is this anything more than to send the question for adjudication, as to the quantity of land forfeitable, to the courts to be judicially determined?

Mr. OATES. But why send to the courts matters in which the United States have no interest? Why should the United States litigate with the company about that which has been granted to and earned by the company? Has not this House intelligence enough to see the actual situation, and independence enough to do what is right, without regard to what the Knights of Labor may command?

It has been truly said that the Democratic platform as well as the Republican declares in favor of the forfeiture of the unearned lands granted by Congress to railroad corporations. Well, I am just that sort of a Democrat who follows out, obeys, and executes to the best of his ability the declarations and pledges made to the people in the national platform of my party, and I propose to do that here. Unlike some of my brethren I do not keep faith in land forfeitures and break it on a proposition to reduce the burdens of tariff and other taxation under which the people suffer.

The only question sir, of difference about forfeitures is as to what is an unearned land grant? What mean the words "unearned land grants?"

Mr. WARNER, of Ohio. That is a question to be determined judicially, I take it.

Mr. OATES. That is very true; but the House has a right and every member has a right to his own opinion about what constitutes the difference between an earned and an unearned land grant. Now, I am clearly of the opinion that an unearned land grant is a grant where the company have failed to build a road, and I am in favor of forfeiting such grants. The Senate bill, which I believe is right in that respect, provides for the forfeiture of the lands from Wallula Junction to Portland, 214 miles along the Columbia River, and the lands on the Cascade branch wherever no road has been built.

There is a road along the Columbia River with which this company has made some arrangement, by which they are able to run it in connection with the completed portions of their own road; but as has been decided, properly I think, by Attorney-General Brewster in the case of the Backbone Railroad in Louisiana, that the grant was made not to enable the company to purchase an already constructed road but to construct a road themselves, they are not entitled to the lands coterminous. As they have already secured a road it will be unnecessary to construct one, and hence these lands ought to be forfeited. Then there are also the lands embraced in the uncompleted Cascade branch of the road. The Senate bill also forfeits them.

Mr. HENDERSON, of Iowa. How much land does this Senate bill forfeit?

Mr. OATES. I am not quite sure, but I think somewhere about 4,000,000 acres.

Mr. HERMANN. It embraces the Wallula branch between Wallula and Portland, something over 2,000,000 acres, and the uncompleted Cascade branch; 75 miles in length and over 1,000,000 acres.

Mr. OATES. Now, Mr. Speaker, as I said, I would not have voted for the grant as originally proposed because it was too extensive. It was a dangerous experiment in legislation. But because our predecessors here constituting the Congress of the United States did improper things, if they passed bills which do not meet the approval of gentlemen now occupying these chairs, that is no reason why we should as sound legislators undertake to dig up yesterday and go back and by our erroneous legislation seek to correct the errors of our predecessors after rights and vast interests have vested under such enactments. Let us execute the law as we may find it so far as the equities of the case are concerned, respecting and preserving vested rights. In our disposition of the case let us do nothing which is unjust or detrimental to the vested rights of this company or those holding under them.

The SPEAKER *pro tempore*. The time of the gentleman has expired.

Mr. OATES. I am entitled to five minutes from the gentleman from California [Mr. HENLEY].

I desire now to answer, in brief, the question of the gentleman from Ohio with reference to this being a judicial question. It is true it will probably go to the courts and the law will be there construed; but when we see right before our faces a law so plain to the mind of any lawyer I do not think we should undertake to make ourselves ridiculous by going into this subject and undertaking to make the granting act mean what it does not. It is too late to amend it. Why do what the judiciary may, when it comes to construe this act, if it ever passes, declare to be unconstitutional and void?

Mr. WARNER, of Ohio. There seems to be a difference among the lawyers on that point.

Mr. OATES. Yes; some lawyers never see straight, anyway. I have no right to say what the Senate will do, but I have no objection to indulging in a little speculation. We have the Senate bill before us which has been the result of two weeks careful discussion in that body. Now, if we strike out all of it after the enacting clause and pass the Senate bill in that amended form, as proposed by the House Committee on Public Lands, the presumption is that we will not get any forfeiture at all. If you pass the bill thus amended and the Senate concurs, which is altogether improbable, in my judgment, you pass a law that would not stand a judicial test and would put Congress in the attitude of having done an unwise thing. And although that frequently occurs, I do not take any share in the responsibility on this occasion.

Mr. BUTTERWORTH. Now let me ask the gentleman as to the operation of the joint resolution which authorized the Northern Pacific to execute a mortgage upon its line, &c. It is held by some gentlemen of the committee that the road, by the right they acquired under the authority to mortgage, obtained simply the right to sell the lands and vest the title, if it was earned by the completion of the road.

Mr. OATES. They maintain that by that joint resolution the Government did not give any other rights than the company had before the resolution was adopted.

Mr. BUTTERWORTH. Very well; in other words, they simply took the rights as mortgagor to pass a perfect title if the company earned it in time. I agree that it is a wrong construction; but I would like to hear the gentleman on that point.

Mr. OATES. The effect of the act in question was to subject the defeasible title to mortgage. The sanction of the Government given by the joint resolution to mortgage the lands, prescribing the mode of sale, notice to be given, and quantities to be sold at a time was and is utterly inconsistent with the right to declare a forfeiture of any of the lands mortgaged in pursuance of that law. I have the authorities at hand to prove it, but no time to read them. (Sheppard's Touchstone, 121; Fletcher *vs.* Peck, 6 Cranch, 87, 135-137; McCrary *vs.* Remson, 19 Ala. Rep., 430.)

It was, according to all legal authorities I have ever read, a clear waiver of the right of the Government to declare a forfeiture of the land mortgaged, certainly as against the mortgagees and bondholders.

Mr. CASWELL. Let me call the gentleman's attention also to the fact that the Government has compelled the Northern Pacific road to carry its mails for 80 per cent. of the amount paid to other railroad companies, on the ground that this is a land-grant road.

Mr. OATES. I thank the gentleman for reminding me of the fact. I have the figures in that respect which I want to lay before the House. I have this statement from the Post-Office Department as the average payments for the last three years to this company. The average receipts of the company, without applying the reduction, amount per annum to $265,578.35; by applying the reduction, $212,512.75—showing a difference against the road of $53,065.60, or about 25 per cent.

The statement is as follows:

FOR CARRYING UNITED STATES MAIL.

Average annual receipts of Northern Pacific road under land grant reduction, compared with what receipts would be without reduction.

Average yearly receipts without reduction	$265,578 35
Average yearly receipts with reduction	212,512 75
Difference against road one year	53,065 60

Being 24.97 per cent. less (about 25 per cent.) than would receive without reduction.

Would receive without reduction, ten years	$530,656 00
Would receive without reduction, twenty years	1,061,312 00
Would receive without reduction, thirty years	1,591,968 00
Would receive without reduction, fifty years	2,653,280 00

Well, you run that deduction through a number of years and in fifty years at 25 per cent. it would make the company pay by deductions on account of the land grant $2,653,280, without reference to the probable increase of mails within that period. And under a statute, which if I had the time I would read—supplement to the Revised Statutes, page 171—it is within the power of Congress to make them carry the troops and munitions of war for no compensation at all, and the mails on such terms as Congress may impose. That extends *ad infinitum;* so long as it is a road and this a government, that obligation continues. It is a hard bargain on the part of the company and a good trade for the Government.

Mr. Speaker, the craze of certain gentlemen who want to go such unreasonable and I may say unlawful lengths in forfeiting land grants can be in part, and on patriotic but I think mistaken ground, accounted for by the fear of land monopoly. If we pass the Senate bill with a slight amendment declaring the road completed within the meaning of the joint resolution, so that the time might run and draw to a close the five years at the end of which it declares that the company shall not sell its lands for more than $2.50 per acre, we will then have done something in that direction. When they can not sell for more than those figures there is not much danger that settlers can not find homes on reasonable terms.

Think for one moment how utterly wanting in sense and ignorant of business principles a railroad company would be who did not want any farmers or merchants to live on or near their line? Population creates business for the road. This company, so far as it has sold lands, has sold them at an average of only $3.43 per acre, as their official returns show; and notwithstanding the extravagant statement of the gentleman from California to the contrary, less than $20,000,000 have been realized by the company from this source.

The construction of the Northern Pacific has completely solved the Indian problem and added vastly to the wealth of the country. In a commercial and military aspect its importance can not well be overestimated. It is the only competitor we have in the carrying trade with the Canadian Pacific Railway. In case of war it puts the capital of the nation in quick communication with our Northwestern Territories and the Pacific Ocean. Who would to-day, as a faithful representative, be willing to give up the road—have it blotted out of existence—to have all the land back just as it was before or at the time the grant was made? I would not.

Now, if you forfeit this land, as the Committee on Public Lands propose, you annul and cancel the obligation of this railroad company, their successors and assigns, *pro tanto*, to carry the mails at reduced rates and the troops, munitions of war, and property of the United States, for it is a familiar principle of law—though some lawyers do not always remember it—that a contract when rescinded, canceled, or annulled as to one of the parties is no longer binding on the other.

If, therefore, the substitute becomes a law, the company will be, as to 1,500 miles of its road, completely absolved from its obligations as a land-grant road; and in the course of a few years when the country along its line is filled up with population, and with the deduction now imposed for carrying the mails removed, the company will receive hundreds of thousands of dollars more per annum from the Treasury for that service than they now receive. And in case of war it may receive millions out of the Treasury, where if no forfeiture is declared the company will not receive anything. It is bad policy to declare this sweeping forfeiture, even if we had the power to do it.

What are you going to do with your lands when you forfeit them and take them back from the railroads? Give them to actual settlers? It is very commendable to furnish homes to our young farmers; but while you are doing that would it not be well to so amend existing law that no unnaturalized person could secure a homestead and that no alien should own land within the United States? Under the law an alien can declare his intention to become a citizen and take a homestead the same day. It encourages emigration to this country, which we do not need, and I do not want them invited to come.

The only effectual solution of the labor troubles of the country is to stop emigration or greatly reduce the number and improve the character of those who come, and you will thereby diminish competition and make the battle of life easier for those already here.

The policy of Mr. Jefferson and his party eighty-five years ago to encourage foreign immigration may have been a very wise one then and for many years thereafter, but it has long since served its purpose. We have a sufficiently large population and do not need immigrants from other countries. In the interest of our laboring people I do not wish to invite and import any competition from abroad.

Reduction of Tariff Taxes.

SPEECH

OF

HON. LOUIS E. ATKINSON.

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886,

On the bill (H. R. 7652) to reduce tariff taxes and modify the laws in relation to the collection of the revenue.

Mr. ATKINSON said:

Mr. SPEAKER: We have before us for consideration a bill "to reduce tariff taxes and to modify the laws in relation to the collection of the revenue." Its author, apparently fearing that its merits will not recommend it, attaches to it the title "tariff taxes" in order to cast upon customs duties the odium which follows taxation, and attempts to invoke this prejudice to aid him when he feels that he and the friends of the measure can not convince the reason. This scheme is an old one, and its inventor can not yet congratulate himself upon its success. In the Forty-eighth Congress we had a bill providing for a horizontal reduction of 20 per cent. upon all customs duties, and it was entitled a bill "to reduce war tariff taxes." It met an early and inglorious death, and the opprobrium it sought to cast upon "tariff taxes" was transferred to its author. Its utter lack of merit became more apparent every day that it was discussed, and its death-blow came from the house of its friends.

In February last another bill labeled "A bill to reduce tariff taxes" was presented to this House and referred to the Ways and Means Committee. The majority of that committee, impelled by the pressure of public sentiment, graciously permitted representatives of the industries which it was proposed to ruin by that bill to be heard, and after its glaring defects and destructive tendencies were exposed it was quietly laid aside as utterly untenable and unjust. But the nightmare of "tariff taxes" still disturbed some of the gentlemen on the other side, and, without hearing the parties whose interest will be injuriously affected, the present bill was sprung upon the House. The title of "tariff taxes," which has twice gone down ignominiously, is still retained, and will, I hope, meet the fate of the other "tariff-tax" propositions that have gone before it.

But is the "tariff tax" the most burdensome tax to our people?

I hold, sir, that there is a worse, a more pernicious, tax than this that is now imposed upon this nation, and which will be greatly increased if this bill becomes a law. The tax to which I refer is the tax we pay to foreign nations for goods that we could and should produce at home. The payment of this "tax" not only takes from us our money or our property, but it impoverishes our people and steals away the employment to which our own mechanics and wage-workers are entitled.

In 1885 we imported—	
Manufactures of wool	$35,776,559
Manufactures of silk	27,467,565
Iron and steel and manufactures of	34,563,689
Manufactures of cotton	27,197,241
Glass and glassware	6,256,194
Earthen, stone, and china ware	4,837,782
Hats, bonnets, &c	4,570,429
Salt	1,519,998
Total	142,189,457

At least half of these imported materials could have been made in our own country, and would in their manufacture have afforded employment and remunerative wages to thousands of our people who were unemployed.

More than $16,000,000 worth of tin plates were imported, while not one dollar's worth was made in the United States. An increase of duties upon these articles would have restrained their importation and have saved to us as a nation the vast sums needed to buy them abroad. The impetus that would have been given to business by the expenditure of $70,000,000 more money among our manufacturers and wage-workers would have made the year 1885 one of the most prosperous, instead of the dullest, commercial years.

But instead of making these things at home our resources were taxed to buy them abroad. They were produced by foreign manufacturers who obtained their capital at lower rates of interest, and by workingmen who worked for lower wages than our own. This was tribute paid to foreigners, and was more onerous than all the "tariff taxes" proposed to be removed by this bill. To-day great is the army of the discontented. The wage-workers all over this broad land are demanding better wages, shorter hours, and steadier employment, and gentlemen on the other side say, "We will give you cheaper salt and woolen and cotton goods, but in doing so we will reduce your wages and throw some of you out of employment by buying abroad some of the goods you formerly made." This is not what is demanded; it affords no relief; it is not a remedy for the evils complained of. The workingman

asks you for bread and you give him a stone. He knows that if goods are sold here at European prices they must either be brought here from Europe or he must work at European wages to produce them for our market.

This bill places wool upon the free-list, and gentlemen say that wool is a raw material and in order to increase our exports and afford employment to men who work in the woolen factories it should be admitted free of duty.

They argue that we can export no woolen goods to foreign countries unless we can cheapen the cost of production, and that this can only be done in one of three ways—by reducing the interest on capital or the wages of labor or the price of the materials used; and from this situation they endeavor to escape by cheapening the materials employed. Will the removal of the duties on wool enable us to manufacture woolen goods for export?

No proof is produced by the advocates of free wool to show that this will be the result; they ask us to take the fact for granted because they say so.

This is easily disproved. We have a full and abundant supply of cotton of every quality desired; it is produced in our own country so that no foreign transportation charges need be paid upon it, and our opportunities to use and manufacture it are superior to those of any other nation, so far as cheapness and abundant supply are concerned. Our operatives engaged in manufactures are as skillful as any in the world and our machinery is equal to the best. Foreign wool will be brought to us with additional transportation charges upon it, and subject to the losses incident to long-distance carriage. Our cotton cloths are in demand in the South American markets where woolen goods are unsuited to the climate, and yet with all our facilities for manufacturing, and with a market near, our exports of manufactured cotton in 1880 were only $10,467,651 out of a total domestic production of $210,900,000 worth of such goods, and in 1885 our exports had risen to only $11,836,591.

The following table shows the extent of our exports of cotton manufactures for eight years:

During the fiscal year ended June 30—	
1877	$10,235,843
1878	11,438,660
1879	10,853,950
1880	9,981,418
1881	13,571,387
1882	13,222,979
1883	12,951,145
1884	11,885,211

From the above statement it will be seen that the average annual value of the exports of cotton manufactures for the last five years (1880-'84) amounted to $12,322,428. On the other hand the average annual value of the imports of manufactures of cotton into the United States during the last five years was $32,285,650.

If we can not export cotton goods, with all these advantages, how can we succeed better with woolen goods, even if the wool is admitted free of duty and will be cheapened if it is placed upon the free-list? But I do not believe that the removal of the duty upon foreign wool will ultimately reduce its price.

In 1864 the production of wool in the United States was 142,000,000 pounds; in 1874 it was 181,000,000, and in 1884 it was 308,000,000 pounds. We imported in the same years 43,840,154, 54,901,760, and 70,596,170 pounds, respectively. In twenty years our wool production was increased 166,000,000 pounds, while our imports were increased only 26,756,016 pounds. At the same relative rate of supply we will soon furnish our own markets with wool from our own flocks and no foreign wool will be needed.

Quantities of wool produced, imported, exported, and retained for consumption in the United States, from 1864 to 1885, inclusive.

Calendar year.	Production.	Year ending June 30—	Imports.	Total production and imports.	Exports.			Retained for home consumption.
					Domestic.	Foreign.	Total.	
	Pounds.		*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*	*Pounds.*

1872	158,000,000	1873	85,496,049	243,496,049	75,129	7,040,386	7,115,515	236,380,534
1873	170,000,000	1874	42,939,541	212,939,541	319,600	6,816,157	7,135,757	205,803,784
1874	181,000,000	1875	54,901,760	235,901,760	178,034	3,567,627	3,745,661	232,156,099
1875	192,000,000	1876	44,642,836	236,642,836	104,768	1,518,426	1,623,194	235,019,642
1876	200,000,000	1877	42,171,192	242,171,192	79,599	3,088,957	3,168,556	239,002,636
1877	208,250,000	1878	43,449,079	256,699,079	347,854	5,952,221	6,300,075	250,399,004
1878	211,000,000	1879	39,005,155	250,005,155	60,784	4,104,616	4,165,400	245,839,755
1879	232,500,000	1880	128,131,747	360,631,747	191,551	3,648,520	3,840,071	356,791,676
1880	240,000,000	1881	55,964,236	295,964,236	71,455	5,507,534	5,578,989	290,385,247
1881	272,000,000	1882	67,861,744	339,861,744	116,179	3,831,836	3,948,015	335,913,729
1882	290,000,000	1883	70,575,478	360,575,478	64,474	4,010,043	4,074,517	356,500,961
1883	300,000,000	1884	78,350,651	378,350,651	10,393	2,304,701	2,315,094	376,035,557
1884	308,000,000	1885	70,596,170	378,596,170	88,006	3,015,339	3,103,345	375,492,825

This increase in the production of wool, it will be observed from the table, is very gradual. From its nature it was not susceptible of sudden enlargement. The acreage in cotton or in wheat may vary very greatly in successive years, but with wool there can be no such variation. Our flocks have grown slowly under the intelligent care of their owners, the statistics of this industry being as follows:

	Sheep.
1840	19,311,375
1850	21,723,221
1860	22,471,274
1870	28,477,951
1880	42,192,074
1885	50,360,243

Not only has the production of wool increased actually but relatively to the number of sheep. Owing to favorable and permanent legislation wool-growers have improved their flocks by raising better breeds and thus increased the weight of fleeces. In 1840, according to the census, the average weight of farm fleeces was 1.65 pounds; 1850, 2.42 pounds; 1860, 2.68 pounds; 1880, 4.79 pounds. Says Mr. Dodge, in commenting on this:

"The improvement in density and weight of fleece constitutes the great advantage that the manufacturing demand has made rather than increase of price, which tends to steadiness and cheapness in material and product, by the full development of the manufacture."

Another point is the higher value of American wools. The imported wools of the last five years constitute nearly one-fifth of the quantity manufactured, but it is little more than a tenth of the value of wool manufactured. This shows that under a sufficient tariff American growers have gone into the best qualities of wool. With this enormous increase in production, has the price been increased to the consumer? Not at all. I give the total average prices, in gold, of domestic, fine medium, and coarse-washed fleece wool for each year from 1859 to 1884, and let the reader judge for himself:

	Cents.		*Cents.*
1859	49	1863	52
1860	48	1864	43
1861	39	1865	51
1862	45	1866	43
1867	37	1876	37
1868	33	1877	40
1869	37	1878	38
1870	40	1879	36
1871	48	1880	40
1872	62	1881	42
1873	48	1882	42
1874	47	1883	39
1875	43	1884	33

These tables could be extended back to 1832, and the fact would be revealed that, with two single exceptions, wool has never averaged as low as in 1884; that the tendency has been a steady increase in production, improvement in quality, and decrease in price, and yet, in spite of all, the Democratic party now proposes to destroy by a single blow the important industry that has grown and flourished so under protection by opening our ports to the free wools of Australia and the River Plate country. This amounts to the confiscation of the property of the farmers, and every sheep-grower in the land should protest against it.

The market for fine wool has been almost completely supplied, and the importations have been principally of the coarser wools. In 1885 we imported clothing wools valued at $2,262,824, combing wools valued at $669,604, and carpet and other similar wools valued at $5,947,495.

Duties more or less protective in their character have been imposed upon wool from the very beginning of this Government, and even the low-revenue tariff of 1846 imposed duties upon imported wool. If foreign wool is now admitted free of duty it is probable that our market will be flooded with wool from abroad and the prices of domestic wool will be broken at once. Wool-growing will become unprofitable and our flocks will be slaughtered, competition between American and foreign wool will cease, and our markets will be surrendered to the foreign product.

The supply of domestic wool no longer competing, the increased de-

mand for foreign wool to supply our own markets will advance the price, and we will find ourselves paying higher prices for inferior foreign wools than we now pay for a better quality of the domestic article. This was the history of prices under the revenue tariff of 1846, and I see no reason to doubt that this result will follow the pernicious legislation imposed by this bill. I have considered this question with no reference to the interest of the wool-growers as producers. But they too have claims upon our consideration.

Mulhall (History of Prices) states that the production of wool has more than doubled since 1850; that is, the increase has been three times faster than that of population, the clip of all nations summing up as follows:

	1850.	1860.	1870.	1883.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
Europe	630,000,000	715,000,000	807,000,000	660,000,000
United States	90,000,000	112,000,000	154,000,000	300,000,000
River Plate	25,000,000	56,000,000	167,000,000	305,000,000
Australia	43,000,000	70,000,000	197,000,000	421,000,000
Cape Colony	48,000,000	68,000,000	101,000,000	122,000,000
Total	836,000,000	1,021,000,000	1,426,000,000	1,818,000,000

The marvelous increase in the production of wool in Cape Colony, Australia, and the River Plate country is without a parallel in history. It is due to the fact that in these places land is cheap, the climate is well adapted to sheep-raising, no feed need be provided for winter, and the wages of the natives who are employed in attending the sheep are very low indeed. Against such competition as will come from these countries, if unrestrained, it will be impossible for our farmers to compete; and if wool is placed upon the free-list, as proposed by this bill, its production in this nation will soon practically cease.

In 1880 there were 382 establishments engaged in the manufacture of silk in the United States. The capital invested in the industry was $28,189,400 and 31,337 hands were employed.

In that year raw silk was imported to the value of $12,024,699 and the manufactured product was valued at $34,519,723.

In the same year our imports of manufactured silk were valued at $31,460,947. The raw silk imported was free of duty, while the manufactured silk had charged upon it an average duty of 58.98 per cent. Here we have an instance of free raw materials such as is contended for by the gentleman from New York, with every facility for its manufacture in the United States. The machinery used was of the best class, and skilled workmen, many of whom had learned their trades in the factories of Europe, were employed. The product of the American looms was superior in quality to that imported, and the duty on foreign silks was higher than upon almost any other fabrics. In fact it was the high duty that first induced our people to engage in the manufacture of silk.

But with free raw material, skilled workmen, good machinery, and a high duty on manufactured silks, we were not able to supply our own markets. The theory of the gentlemen on the other side is that with free raw materials our exports of manufactured products will be increased. Why was there not a large exportation of American silks after raw silk was placed on the free-list? But the beneficial influence of a protective tariff was well illustrated in the growth of the silk industry of the United States. In 1870 we imported only three millions' worth of raw silk, while in 1880 our imports were twelve millions, and silk goods were first manufactured here in 1867. Without a protective tariff we would import all the silk goods we use; with protection we manufacture more than one-half. We employ more than thirty-five thousand people at this industry, and add $25,000,000 annually to the value of the raw materials imported before they are placed on the market for consumption.

I believe, sir, that it is our duty to so legislate as to develop the producing forces of this country. "A nation, whether it consume its own products or with them purchase from abroad, can have no more value than it produces." "Without production of value you can neither consume nor buy. *Ex nihilo nihil fit.* Every increase of domestic production is an addition of so much wealth and so much of the means of purchase; any diminution of domestic production is a subtraction of so much wealth and of so much of the means of purchase." These principles are self-evident. Let us apply them. It has become apparent that the markets of the world are already supplied with more of the products of agriculture than will be bought at fair prices. Senator BROWN, of Georgia, has recently said:

> We find that if we should all remain cotton planters as our fathers were cotton planters, we would make, as indeed we have already made, an amount of production that would be beyond the demand. Take the last year as an illustration. While many of our people have gone into other pursuits, diversifying industry, we made more cotton than the world desired or needed at a fair price. Consequently there is no little distress now among the Southern people, because Southern planters have to pay debts, contracted in the expectation of receiving the ordinary price for cotton, with the proceeds of cotton sold at 8 cents per pound instead of 10 cents per pound. This teaches us that we still have too large a proportion of our population engaged in the cultivation of cotton, and that we ought to diversify our industries still more.

The same may be said of wheat. The British Government has expended vast sums of money in India for the purpose of developing wheat-growing in that country, and this expenditure is now bearing fruit. The export of wheat from India in 1872-'73 amounted to 14,385 tons; in 1881-'82 to 2,993,176 tons.

Wages of agricultural laborers in that country are 8 or 9 cents a day, and they can live on rice at a cost of two cents a day. And this vast increase in the amount of wheat produced in that country is due to the low rates of wages and increased and cheapened transportation. This increase in production may go on indefinitely. The area of wheat lands in India in 1884 was estimated by British officials at 26,000,000 acres, and new railway lines now in course of construction or in contemplation will soon add 9,000,000 more. It is believed that the wheat lands of India are as great in amount as in the United States, and that wheat may be grown upon them at a much less cost per bushel.

It thus appears that the markets of Europe may soon be supplied from this source, and that the American market will soon be the only one open to the American farmer.

A great increase in wheat production in this country will reduce the price and make the production of this cereal still less profitable. The market for corn, oats, and cattle can not be much further extended in foreign countries, so that there is little reason to hope that augmented quantities of these products can be successfully marketed abroad.

The American market will be the chief reliance in the future, as now, for the American farmer. In this condition of things is it right to surrender our own markets to foreign wool-growers? Upon almost every farm a flock of sheep can be kept without great expense; they consume for food much that would not otherwise be utilized, and the income from the flock is an item of importance to the farmer, even if he does not devote especial attention to sheep-growing. He should not be left exposed to the unrestrained competition of foreigners. The American farmer bears his full share of the public burdens, he maintains the highways, builds churches and school-houses, and maintains schools, supports the poor, fortunately less numerous here than in free-trade countries, and loyally lends his aid to American institutions. He deserves and should receive all the support and encouragement which we as legislators can give him.

Men denounce what they call the "robber tariff," and use the words "rob," "robber," and "robbing" as glibly as if some part of our people was being wronged and foully dealt with by the rest, and that this was rendered possible by a protective tariff. If any persons feel that they are robbed several modes of relief at once suggest themselves. They may leave the country and go to some other where they will not suffer in this way. Lest this might be considered a hardship it may be proper to call attention to the fact that many millions of people have left the free-trade paradise of Great Britain to escape from an undesirable environment, and it will be no worse for the "robbed" to go abroad than for those who have fled from the blessings of free trade; or to avoid "robbery" they need buy nothing that is manufactured in our factories and workshops and can again start the looms and make coarse cotton and woolen cloths in their houses, as was done when the Southern Confederacy practiced the political economy that gentlemen now preach, or they may start factories for themselves and supply their own wants.

If they will do none of these things, I submit that they have no right to say that because the least progressive States oppose the system which has built up our vast industrial interests, therefore these interests shall be destroyed and the system that made them possible, that built them up and sustains them, shall be abolished. The protective system was not adopted for the benefit of any class or any locality.

The second statute passed by Congress, and which Washington signed, declared in the preamble that it was "necessary for the support of the Government, for the discharge of the debt of the United States, and the encouragement and protection of manufactures, that duties be laid," and with singular appropriateness it was approved July 4, 1789. The declaration of our political independence was declared on July 4, 1776, and this new law was a declaration of industrial independence. It was intended to be the means of restraining, by governmental action, the importation of foreign manufactures, for the encouragement of manufactures and of labor at home, and desired and meant to do this by clothing the new Government with this specific power of regulating commerce.

It was the first measure of the patriots, and it aimed to establish their independence on the basis of the productive industry and the laborious arts of the country. It was not intended to "rob" the colonies or any of them, but it was intended to prevent robbery, to protect and create and foster industries and the capital and labor employed in them. It was a shield and not a sword. It had already been learned in the school of impoverishment and suffering that political independence was not in itself any defense against the aggressions of Great Britain upon the manufacturing industries of the United States. It was seen that industrial independence was necessary to support political independence and national unity, and industrial independence could only be secured by checking or prohibiting the importation of foreign commodities which interfered with the growth and prosperity of domestic manufactures. It was intended to give to our own people an opportunity to develop all the resources of own country, so that they might be supplied, whether in time of peace or of war, by their own efforts, with

everything that the boundless resources of this nation might enable them to produce. Eight years of war were required to secure the political independence of the colonies, and a perpetual contest has since been waged with Great Britain and her allies to maintain our industrial independence.

If the policy of protection was intended to benefit the whole nation and not a part, may I not ask in what manner it has failed to accomplish this result? Under protective tariffs we have built up vast industrial establishments producing a very large proportion of the manufactured articles used in our country and affording employment to great numbers of our people.

It has cheapened every article in daily use and has been the means of securing better wages to the wage-workers of America than are paid in any other country. It has raised the value of agricultural lands, has prevented an excessive production of farm products; it has diversified them and has given to the farmer a home market which consumes 90 per cent. of all he sells off his farm. Gentlemen say, "Let in the products of other nations and thereby let out the products of our own."

What products of other nations shall we admit, and from whence shall they come? We already receive from foreign nations commodities that we do not produce ourselves, and of these the most important, including tea, coffee, and many others, which do not come into competition with our own productions, are admitted free of duty. No legislation is needed to let in these articles; it has been already done. Shall we let in greater quantities of the products of other nations that come into competition with our own than we now receive; and, if so, what shall we admit? Can greater quantities of such articles be admitted without depriving American citizens of employment and American capital of its investments? Surely not. No one can specify a single article now produced in this country which can be supplied from abroad without injury to some one of our own interests, and this injury will not be to the producers alone, but in the end to the consumers as well.

None are exclusively producers but all contribute to consumption also, and few are consumers only, almost all contributing to some form of production. What products of our nation will we let out? That many articles of commerce are produced here that may be sent abroad is true, but that a great demand for them will be created by the admission of products that we can ourselves supply has never been shown, and I believe never will be.

It is not true that if our purchases abroad are increased we can in consequence sell more abroad. Foreign nations will take from us only what they need, that is, what they can not produce themselves, and no more. They consume what they themselves produce in the first instance and go abroad for the deficiency only.

That the nations of whom we buy take from us only such things as they need, and no more, is well shown by the following official tables:

Value of the imports of merchandise from, and of the exports of merchandise to, those countries in our commerce with which the value of imports exceeded the value of exports during the year ending June 30, 1885.

Order.	Countries.	Imports of merchandise into the United States.	Exports of domestic and foreign merchandise from the United States.	Imports in excess of exports.
1	Brazil	$45,263,660	$7,317,293	$37,946,367
2	Cuba	42,306,093	9,006,160	33,299,933
3	Switzerland	13,863,432	46,360	13,817,072
4	British East Indies	17,699,257	4,110,368	13,588,889
5	France	56,935,352	46,708,950	10,226,402
6	China	16,292,169	6,296,500	9,895,669
7	Japan	11,767,956	3,057,415	8,710,541
8	Spanish possessions, other than Cuba and Porto Rico	7,789,756	169,354	7,620,402
9	Hawaiian Islands	8,857,497	2,787,922	6,069,575
10	Porto Rico	6,104,263	1,569,205	4,535,058
11	Central American states	6,409,015	2,762,531	3,646,484
12	Venezuela	6,309,580	3,043,609	3,265,971
13	British West Indies	10,363,381	7,210,879	3,152,502
14	Austria	5,745,580	2,714,537	3,031,043
15	Italy	14,492,908	11,974,417	2,518,491
16	Turkey	3,153,900	1,402,091	1,751,209
17	Dutch East Indies	3,261,671	2,103,066	1,158,605
18	Uruguay	2,754,617	1,682,443	1,072,174
19	Peru	1,764,890	742,105	1,022,785
20	Germany	63,241,753	62,222,791	1,018,962
21	Mexico	9,207,021	8,940,784	996,237
22	All other countries in Africa not elsewhere specified	1,044,204	407,055	637,149
23	British possessions, all other	854,183	369,181	485,002
24	San Domingo	1,461,419	986,701	474,718
25	Greece	596,707	207,822	388,885
26	All other countries in South America not elsewhere specified	753,601	428,011	325,590
27	Greenland, Iceland, and the Faroe Islands	113,847		113,847
28	Roumania	47,493	11,088	36,397
29	French possessions, all other	387,669	382,305	5,354
	Total	358,882,856	188,161,543	170,721,313

From this table it appears that although we bought from Brazil in 1885 $45,263,660 of her products, yet she bought from us only $7,317,293 of our products. It can not be said that she declined to buy from us, because her exports were subjected to the payment of tariff duties. Our purchases from her were chiefly coffee, india-rubber, and hides, all of which were admitted free of duty. The case was simply this: We found it to our advantage to buy her products, while she found it to her interest to buy elsewhere, or else to produce for herself what she might have bought from us. And it likewise appears that we sell vast quantities of materials to other countries and buy much less from them.

Value of the imports of merchandise from, and of the exports of merchandise to, those countries in our commerce with which the value of exports exceeded the value of imports during the year ending June 30, 1885.

Order.	Countries.	Imports of merchandise into the United States.	Exports of domestic and foreign merchandise from the United States.	Exports in excess of imports.
1	Great Britain and Ireland	$136,701,780	$398,103,203	$261,401,423
2	Belgium	8,036,084	26,458,249	17,763,165
3	Netherlands	5,652,749	16,804,263	11,151,514
4	British possessions in Australasia	2,823,393	10,648,192	7,824,799
5	Spain	4,705,945	11,991,068	7,287,123
6	Russia	3,091,449	7,762,746	4,671,297
7	Denmark	350,451	4,538,523	4,188,072
8	Portugal	1,007,150	4,598,346	3,591,196
9	United States of Colombia	2,342,077	5,583,368	3,241,291
10	Hong-Kong	963,815	4,149,311	3,165,496
11	British North American possessions	36,960,541	40,124,907	3,164,366
12	Chili	604,525	2,211,007	1,606,482
13	Gibraltar	2,563	1,261,611	1,258,048
14	Hayti	2,471,436	3,307,307	835,871
15	British Guiana	921,354	1,640,657	719,303
16	Sweden and Norway	2,610,671	3,118,278	507,607
17	Miquelon, Langley, and Saint Pierre Islands	18,686	414,547	395,861
18	Argentine Republic	4,328,510	4,676,501	347,991
19	All other countries in Asia not elsewhere specified	57,082	372,821	315,739
20	Azore, Madeira, and Cape Verde Islands	100,517	413,738	313,221
21	French possessions in Africa	142,856	450,562	307,706
22	Dutch West Indies	386,668	666,842	280,174
23	French West Indies	1,147,515	1,418,973	271,458
24	Danish West Indies	336,303	586,159	249,856
25	All other countries not elsewhere specified	9,142	165,803	156,661
26	British Honduras	218,360	369,753	151,393
27	French Guiana	1,803	110,844	109,041
28	Dutch Guiana	265,399	299,018	33,679
29	Spanish possessions in Africa	127,366	157,987	30,621
30	Liberia	71,085	101,703	30,618
31	British possessions in Africa	1,509,258	1,514,617	5,359
32	Portuguese possessions in Africa		5,307	5,307
	Total	218,644,473	554,028,212	335,383,739

This table shows that in 1885 we sold $261,401,423 more to Great Britain than she bought of us. If the question is asked why did we not buy more from Great Britain, the answer is promptly made, we needed no more of her productions, and, therefore, our purchases were limited to about 33 per cent. of our sales. If all the exports from Great Britain to our country had been free of duty it is doubtful if she would have taken more of our commodities than she did. She bought what she needed, and her purchases were limited by the requirements of her people.

In the course of the debate upon a bill providing for a horizontal reduction of 20 per cent. upon existing duties, offered in the Forty-eighth Congress, a distinguished gentleman upon this floor presented a table showing the increase of wealth per capita in the six New England States, New York, New Jersey, and Pennsylvania, and compared it with the increase shown in the other States of the Union. From this table it appeared that in 1850 these nine selected States had a total population of 8,628,851. In 1860 the same States had 10,500,000; in 1870 this had increased to 12,200,000; while in 1880 it was 14,500,000. All the States of this Union had 23,000,000 in 1850, 31,000,000 in 1860, 38,000,000 in 1870, and 50,000,000 of population in 1880. The percentage of population of the nine States named in 1850 was 37 per cent. of the total.

From 1850 to 1860 the percentage went down from 37 to 33 per cent.; from 1860 to 1880 they changed from 33 to 31 per cent., and from 1870 to 1880 it went down to 28 per cent.

The per capita wealth of these nine States was $360 in 1850; in 1860 it was $527, and from 1860 to 1870, under a protective tariff, it jumped from $527 to $1,243 per head, and went from 1870 to 1880 to $1,353 per head. In 1850 the per capita of the other States was $274; in 1860 it was $506; in 1870 it was $562, and in 1880 it had increased to $672 per head. I print this table with my remarks:

Wealth and population of the United States.

	Population.				Estimated true valuation.			
	1850.	1860.	1870.	1880.	1850.	1860.	1870.	1880.
The United States	23,191,876	31,443,321	38,558,371	50,155,783	$7,135,780,228	$16,159,616,068	$30,068,518,507	$43,642,000,000
Maine	583,169	628,279	626,915	648,936	122,777,571	190,211,600	348,155,671	501,000,000
New Hampshire	317,976	326,073	318,300	346,981	103,652,835	156,310,860	252,624,112	328,000,000
Vermont	314,120	315,098	330,551	332,286	92,205,049	122,477,170	235,349,553	289,000,000
Massachusetts	994,514	1,231,066	1,457,351	1,783,085	573,342,286	815,237,433	2,132,148,741	2,705,000,000
Rhode Island	147,545	174,620	217,353	276,531	80,508,794	135,337,588	296,965,646	420,000,000
Connecticut	370,792	460,147	537,454	622,700	155,707,980	444,274,114	774,631,524	852,000,000
New York	3,097,394	3,880,735	4,382,759	5,082,871	1,080,309,216	1,843,338,517	6,500,841,264	7,619,000,000
New Jersey	489,555	672,035	906,096	1,131,116	200,000,000	467,918,324	940,976,064	6,433,000,000
Pennsylvania	2,311,786	2,906,215	3,521,951	4,282,891	722,486,120	1,416,501,818	3,808,340,112	5,333,000,000
Total for nine States	8,626,851	10,594,268	12,298,730	14,507,407	3,130,989,851	5,591,607,424	15,290,032,687	19,630,000,000
Per cent. of population and valuation of the nine selected States	37	33	31	28	43.88	34.60	50.85	44.98
Per capita wealth of the nine selected States	$363	$527	$1,243	$1,353				
All other States	14,565,025	20,849,053	26,259,641	35,648,376	$4,004,790,377	$10,568,008,644	$14,778,485,820	$24,012,000,000
Per capita wealth, all other States	$274	$506	$562	$673				

From these facts he drew the inference that the increase of wealth in the nine selected States which he termed "unnatural" was the "direct result of the protective tariff system of which they are the beneficiaries!"

Let us examine these figures and see if he drew a proper deduction from them. The State of New York has long been the financial and commercial center of this nation. The imports and exports landed and shipped from the wharves of New York city, Philadelphia, and Boston largely exceeded those at all the other ports of the United States. Was not the profit derived from this source alone an important factor in making up the gross per capita of which the excess is complained of?

New York city was the railroad center of the continent and held vast investments in railroad and other stocks. The riches of her wealthiest citizens did not come from the manufacturing interests that he complains are fostered by protective tariffs, but from other sources. If he had investigated the subject with care he would have found that few of the great fortunes accumulated by citizens of these cities were made in manufacturing enterprises, but most of them had their origin in speculation and trade. And in this respect America under protection differs from England under free trade. Here the fortunes of the men engaged in manufacturing are moderate, while a large proportion of their employés are the owners of the houses in which they live, and their earnings are sufficient to furnish them with good food, comfortable clothing, and the means of educating their children. In England vast fortunes are accumulated by the manufacturers, while their workmen never accumulate enough from their earnings to buy land. They are poorly fed and clothed, and their children are uneducated, because of the insufficient means of their parents and because they are put to work at an early age in order to help out the scanty wages of their parents. "In your fifteen years' experience," said a gentleman to Inspector Wheatley, "in which your jurisdiction has extended all over the borough of Leeds, embracing, as it does, three hundred and twenty thousand of the most thrifty industrial population in England, did you ever know the ordinary workingman to own the house in which he lived and the ground on which it stands? I mean the skilled artisan, the mechanic, the engineer, the carpenter, the mason, and the like." "If I was on my oath in court, sir," said the inspector, "I should be obliged to answer, in my experience, never."

But it is admitted that a part of the increased wealth per capita is due to the profits of manufacture. In the nine States named most of the manufactured goods consumed in the United States in the last twenty years were made. Vast sums of money have been expended in the construction of buildings and machinery, and still greater sums have been distributed as wages to the toiling thousands who have in these nine States contributed the product of their labor to the people of the United States. Keen competition with each other kept the profits of the manufacturers within reasonable bounds, and few who advocate a reduction of duties will go upon the platform and declare that the wages paid the workingmen were excessive. The products were sold at reasonable rates, and lower in almost every instance than the same goods could have been bought in the low-tariff period prior to 1860.

COMPARISON OF PRICES.

[From the New York Dry Goods Chronicle.]

It is interesting in the light of tariff discussions to compare the price of staple goods in 1860 with those current in 1886. Free-traders claim that our protective tariff has increased the cost of goods to consumers, whereas the facts are all the other way. Previous to the civil war tariff duties were very low as compared with the duties since imposed. According, therefore, to free-trade arguments, prices should increase in proportion to the increase of duties. The following table of jobbing prices, in cents, will best explain itself in connection with this matter.

Cotton goods.	1860.	1886.
Bleached cottons:		
New York Mills 4-4	15½	10½
Wamsutta 4-4	13½	10½
Utica Nonpareil 4-4	12	10½
Lonsdale 4-4	11½	7½
Hill 4-4	11½	7½
Utica 4-4	15½	10
Utica 6-4	18½	16
Utica 9-4	30	22½
Utica 10-4	33	25
Unbleached cottons (Atlantic A 4-4)	9	6½
Tickings (Amoskeag A C A)	16	12½
Drills (standard brown)	8½	6½
Ginghams (Lancaster)	10½	7½
Prints (medium fancy)	9½	5½
Print cloths:		
64 by 64 picks	5½	3½
56 by 60 picks	5½	2½

Middling cotton in 1860 was 10 to 11 cents; in 1886, from 9½ to 9¼ cents.

If a profit is realized in the manufacture of goods for the American market to whom would the gentlemen who advocate a reduction of duties have it go? Would they distribute it between the foreign shipowner, who conveys crude products from America to Europe and brings back manufactured goods, and the man who manufactures them abroad, or would they prefer that the profit should be made and kept at home? If to the foreigner, it goes to build up the prosperity of our commercial rivals, whose interests are inimical to ours; if to the American, it becomes a part of the wealth of the nation. Its owner improves and builds up and beautifies our towns and cities; he contributes to the support of schools and churches and libraries and gives employment to thousands of our citizens who are dependent upon their labor for their support. It is a principle of protection that the laborers of a nation are entitled to their own market, and they should not be undersold by foreign competitors working for pauper wages and contributing nothing to the support of our nation or its institutions.

But if the wealth of these nine States has been augmented by the encouragement given to their industries by protective duties they do not enjoy these benefits exclusively. The same shield which protects them from overthrow is thrown around the same industries in other States; and if an increase of wealth flows from them in the nine States named will it not inevitably follow their establishment in the other twenty-nine States? The answer has been already given. Manufactories of cotton and iron and agricultural implements are springing up all over the South, and the riches that she lost by her suicidal attempt at secession will be restored by the new prosperity that the lately introduced industrial agencies will bring.

Instead of producing only raw cotton to be sent to the other side of the globe to be converted into fabrics to be returned to clothe her own people, may we not look forward to the time when she will reap not only the profit from the cultivation of her cotton but the profit of its manufacture also? The policy that I advocate will develop her industrial forces, will give value to the coal that lies in her unopened mines and the iron ore heretofore lying valueless in her mountains, and we will have not only a new Birmingham but a new Leeds, a new Sheffield, and a new Glasgow, differing from the old in having a well-paid, a well-fed, a well-educated, and a contented and prosperous industrial population. And for this we may not have long to wait.

That a reduction in the rates of duty will not improve business nor the condition of our wage-workers is well shown by the present condition of Great Britain. Business depression prevails there to a greater

extent than here. Vast numbers of men are out of employment from this cause, and destitution and pauperism seem to be increasing. Late consular reports show that in 1885 trade, instead of reviving, "has crept along the ground" and in several important departments has become increasingly lifeless as the months went by. The consul at Birmingham, in England, reporting to the State Department the condition of trade at that place for 1885, says:

DEPRESSION OF TRADE AND CAUSES THEREOF.

There is no question that manufacturing interests are in a seriously depressed state, and the volume of trade materially lessened, coupled with smaller profit on most goods made, and my judgment is not wholly based on the very appreciable diminution in volume and amount that passes through this consulate to the United States, but by conversation with and through inquiry of the many prominent manufacturers I have met. No further testimony need be adduced as proof of the depression here when I state that there are in this city to-day twenty-five thousand unemployed workmen. And I am convinced that so far as this demoralization of trade and manufacture relates to this immediate district and its industries, it is going to stay and become permanent, subject, perhaps, to spasmodic periods of prosperity arising from wars or foreign complications rendering other countries incapable of entering into active competition.

There are many reasons why England should have so long maintained a supremacy in many of her manufacturing and industrial interests, and equally good reasons why it can not be maintained, and why so many factories are idle and trades languishing.

And this is the story from almost all the consular districts in that country. The decline in ship-building is shown by the following table:

Vessels built in the United Kingdom (exclusive of vessels built for foreigners).

Years.	Steam-vessels.		Sailing vessels.	
	Number.	Tons.	Number.	Tons.
1882	610	521,575	362	145,700
1883	806	621,758	368	146,818
1884	570	335,208	431	162,234

One of our consuls alludes to it as follows:

Ship-building has not been brisk in Aberdeen for months, and many workmen in this and kindred branches have been idle. The shipping trade has also been very unremunerative, and, in consequence, some vessels have been laid up for a year.

This depression embraces almost all industries, and is followed by a reduction of wages as well as diminished prices, the consul for Dundee reporting:

Employers and employed have severely felt and are still feeling the effect of this extraordinary state of matters which has so long existed and is still continuing. They are experiencing a condition of commercial inactivity which ... months has been gradually getting worse, and unfortunately there is very little sign of improvement. Even with the very cheap raw material that has been obtainable during the year, and the low wages that have been paid to workers, jute-mill owners declare they have been running their works for some time back at a loss, owing to the small prices that their manufactured productions realized. In consequence thereof the operatives have been compelled to sympathize practically with their employers by submitting to reductions of wages, amounting in all to about 10 per cent. Some of the employés in the Dundee mills refused to accept lower pay and struck work, but as the strike was not general these malcontents prudently gave in to their master's proposals. There were also reductions of wages that took place in 1884, so that jute-workers now receive from 15 to 20 per cent. less remuneration than they did two to three years ago.

Men are daily flying from this Utopia of free trade and seeking homes in countries where "robber" tariffs enable them to establish comfortable homes and rear and educate their children. The statistics of emigration from Britain for two years are as follows:

EMIGRATION AND IMMIGRATION.

Number of emigrants of British origin only to countries out of Europe.

Destination.	1883.	1884.
British colonies in North America	44,185	31,134
United States	191,573	155,280
Australia and New Zealand	71,264	44,255
Other places	13,096	11,510
Total	320,118	242,179
Of foreign and unknown origin	77,039	63,722
Total emigration	397,157	303,901

"The total number of natives of Ireland who left the Irish ports from May 1, 1851, to December 31, 1879, was 2,541,670, comprising 1,356,539 males and 1,185,131 females. Emigration from Ireland has gone on steadily increasing from 37,587 in 1879 to 95,517 in 1880, 89,566 in 1882 and 108,724 in 1883. In 1884 only 75,863 left Irish ports." Remarkable as this depopulation of one of the richest agricultural countries of the world appears, the statistics of pauperism of the United Kingdom are equally surprising and deplorable.

Paupers, exclusive of vagrants, in receipt of relief in the several unions and parishes and boards of guardians for 1884.

Countries.	Adult, able-bodied.	All others, exclusive of vagrants.	Total.		
			In-door.	Out-door.	Total.
England and Wales	102,427	681,728	190,184	593,971	784,155
Scotland					90,536
Ireland	7,416	41,493		57,039	106,717
Total					981,408

The poor rates of 1884.

England and Wales	$76,763,455
Scotland	4,635,450
Ireland	7,019,050
Total	88,417,955

The declaration of one of the leading statesmen of this country (England) lately made in a public political address, that one in every ten or fifteen is wholly or partially dependent upon charity for the necessaries of life, may be, as it is to be hoped, somewhat exaggerated; yet the fact that 981,408 persons, 1 in 36, are registered as paupers, is sufficiently appalling, and leads to the belief that the statement to which allusion has been made may be approximately true.

In England—	Inhabited houses.	Uninhabited houses.
In 1871 there were	4,259,117	261,345
In 1881 there were	4,831,519	286,676

No comment of mine can add a darker hue to this somber picture. It speaks for itself. Although the condition of our wage-workers is not what it should be, nor what it would be if a revision of the tariff were made in the interests of labor, and duties were increased upon many articles which could be produced here, but which are now imported in excessive quantities, still we have no persons who are classified as "adult able-bodied paupers."

Our almshouses contain only the old and infirm and those who are disabled. No emigrants leave our shores to avoid pauperism and want, and no States are depopulated where the land is ample to maintain the people. We have no uninhabited houses; I mistake, there are in one of the cities of my own State uninhabited houses.

The bright little city of Chester, until lately as busy and prosperous as any place in this country, has many vacant houses now. Formerly they were occupied by intelligent, industrious, and prosperous mechanics, whose daily toil received fair compensation from a skilled shipbuilder. But the reckless hand of a Democratic Secretary of the Navy, wantonly and of his own wrong, drove John Roach out of business and his workmen out of employment, and uninhabited houses stand to mark the places where before were happy homes. And the wanton attacks of the free-traders of this House will, if successful, still further increase the number of "uninhabited houses."

But a new factor has suddenly sprung into the arena and has challenged the advocates of cheapness to a trial of strength. The workingmen who have seen their wages reduced and their hours of work increased, while the worship at the altar of the moloch of cheapness has been going on, have organized and are asserting their rights with no uncertain voice.

They appreciate their power and are determined to exercise it in a way that will prevent the cheapening of men and women.

They have observed that cheap pig-iron and cheap coal can only be secured by reducing their wages, and they have determined that these things come at too high a price if to obtain them the men who produce them must be degraded. And they intend to see to it themselves that they shall be treated as men, and that their employers shall not be exposed to an unfair competition with those who are at liberty to treat their laborers as slaves or machines. The demand for a fair day's wages for an honest day's work has gone up, and woe be to the men who resist it.

Pauper labor and cheap capital may keep down the prices of manufactured goods abroad, but our people will not submit to be pauperized at the nod and beck of a set of theorists, who see merit only in cheapness, who toot the praises of foreigners and care more apparently for the thing made than for the man who made it. The men who assail our industries say let us remove the duties and secure cheap coal and cheap iron ore and cheap rice and oats and hay and salt and corn and potatoes, and then we can make cheaper iron and obtain cheaper food and supplies.

But in this cheapening process they lose sight of the thousands who will be thrown out of employment by the competition of foreign rivals, of the diminished demand for home productions, of the idleness and misery and want into which so many of our own people will be plunged.

The Moloch of cheapness can only be satisfied in this way, but they are willing to make the sacrifice. They fall into the error of believing that they can destroy the interests of a part of our people and thereby benefit the rest. This is a grave mistake. "The interest of every part and of every class of persons, whether in one part of the country or another, whether industrious or not industrious, so sympathizes and is so bound up and intertwined with that of the whole country that none can be injured without the blow affecting the whole country."

APPENDIX.

[Extracts from the messages of the Presidents of the United States, and other official documents, showing the principles upon which the revenue tariff of 1846 was based, the condition of the country at the time of its adoption, and the bankruptcy, both individual and national, which resulted from it.]

[Polk's first annual message, December 2, 1845.]

The attention of Congress is invited to the importance of making suitable modifications and reductions of the rates of duty imposed by our present tariff laws. The object of imposing duties on imports should be to raise revenue to pay the necessary expenses of Government. Congress may undoubtedly, in the exercise of a sound discretion, discriminate in arranging the rates of duty on different articles; but the discriminations should be within the revenue standard, and be made with the view to raise money for the support of the Government.

It becomes important to understand distinctly what is meant by a revenue standard, the maximum of which should not be exceeded in the rates of duty imposed. It is conceded, and experience proves, that duties may be laid so high as to diminish or prohibit altogether the importation of any given article, and thereby lessen or destroy the revenue which, at the lower rates, would be derived from its importation. Such duties exceed the revenue rates, and are not imposed to raise money for the support of the Government.

If Congress levy a duty for revenue of 1 per cent. on a given article it will produce a given amount of money to the Treasury, and will incidentally and necessarily afford protection or advantage to the amount of 1 per cent. to the home manufacturer of a similar or like article over the importer. If the duty be raised to 10 per cent. it will produce a greater amount of money and afford greater protection. If it be still raised to 20, 25, or 30 per cent., and if as it is raised the revenue derived from it is increased, the protection or advantage will also be increased; but if it be raised to 31 per cent., and it is found that the revenue produced at that rate is less than at 30 per cent., it ceases to be a revenue duty. The precise point in the ascending scale of duties at which it is ascertained from experience that the revenue is greatest is the maximum rate of duty which can be laid for the *bona fide* purpose of collecting money for the support of the Government. To raise the duties higher than that point and thereby diminish the amount collected is to levy them for protection merely and not for revenue.

[Extract from Polk's third annual message, December 7, 1847.]

During the past year the most gratifying proofs are presented that our country has been blessed with widespread and universal prosperity. There has been no period since the Government was founded when all the industrial pursuits of our people have been more successful or when labor in all branches of business has received a fairer or better reward.

The act of the 30th of July, 1846, "reducing the duties on imports," has been in force since the 1st of December last (1846), and I am gratified to state that all the beneficial effects which were anticipated from its operation have been fully realized. The public revenue derived from customs during the year ending on the 1st day of December, 1847, exceeds by more than $8,000,000 the amount received in the preceding year under the operation of the act of 1842, which was superseded and repealed by it.

For the purpose of increasing the revenue, Mr. Polk recommends the imposition of duties upon tea and coffee.

[Polk's fourth annual message, December 5, 1848.]

Severe commercial revulsions abroad have always heretofore operated to depress, and often to affect disastrously, almost every branch of American industry.

The temporary depression of a portion of our manufacturing interests is the effect of foreign causes, and is far less severe than has prevailed on all former similar occasions.

[Fillmore's first annual message, December 2, 1850.]

I strongly recommend a modification of the present tariff, which has prostrated some of our most important and necessary manufactures, and that specific duties be imposed sufficient to raise the requisite revenue, and making such discrimination in favor of the industrial pursuits of our own country as to encourage home production, without excluding foreign competition.

It is also important that an unfortunate provision in the present tariff which imposes a much higher duty upon the raw material that enters into our manufactures than upon the manufactured article should be remedied.

A duty laid upon an article which can not be produced in this country, such as tea and coffee, adds to the cost of the article, and is chiefly or wholly paid by the consumer.

But a duty laid upon an article which may be produced here stimulates the skill and industry of our own country to produce the same article, which is brought into the market in competition with the foreign article, and the importer is thus compelled to reduce his price to that at which the domestic article can be sold, thereby throwing a part of the duty upon the producer of the foreign article. The continuance of this process creates the skill and invites the capital which finally enables us to produce the article much cheaper than it could have been introduced from abroad, thereby benefiting both the producer and the consumer at home. The consequence of this is, the artisan and the agriculturist are brought together, each affords a ready market for the produce of the other, and the whole country becomes prosperous; and the ability to produce every necessary of life renders us independent in war as well as in peace.

[Fillmore's second annual message, December 2, 1851.]

The values of our domestic exports for the last fiscal year exhibit an increase of $43,646,322. At first view, this condition of our trade with foreign nations would seem to present the most flattering hopes of its future prosperity.

An examination of the details of our exports, however, will show that the increased value of our exports for the last fiscal year is to be found in the high price of cotton which prevailed during the first half of that year, which has since declined about one-half.

The value of our exports of breadstuffs and provisions, which it was supposed the incentive of a low tariff and large importations from abroad would have greatly augmented, has fallen from $68,701,921 in 1847, to $26,051,373 in 1850, and to $21,848,653 in 1851, with a strong probability, amounting almost to a certainty, of a still further reduction in the current year.

The aggregate values of rice exported during the last fiscal year, as compared with the previous year, also exhibit a decrease amounting to $460,917, which, with a decline in the values of the exports of tobacco for the same period, make an aggregate decrease in these two articles of $1,156,751.

The policy which dictated a low rate of duties on foreign merchandise, it was thought by those who promoted and established it, would tend to benefit the farming population of this country by increasing the demand and raising the price of agricultural products in foreign markets.

The foregoing facts, however, seem to show incontestably that no such result has followed the adoption of this policy.

On the contrary, notwithstanding the repeal of the restrictive corn laws in England, the foreign demand for the products of the American farmer has steadily declined, since the short crops and consequent famine in a portion of Europe have been happily replaced by full crops and comparative abundance of food.

The exports of specie to liquidate our foreign debt during the past fiscal year have been $24,263,979 over the amount of specie imported.

The export of specie during the first quarter of the present fiscal year have been $14,651,827. Should specie continue to be exported at this rate for the remaining three-quarters of this year, it will drain from our metallic currency during the year ending 30th June, 1852, the enormous amount of $58,607,308.

[Fillmore's third annual message, December 6, 1852.]

Without repeating the arguments contained in my former message in favor of discriminating protective duties, I deem it my duty to call your attention to one or two other considerations affecting this subject. The first is, the effect of large importations of foreign goods upon our currency. Most of the gold of California, as fast as it is coined, finds its way directly to Europe in payment of goods purchased. In the second place, as our manufacturing establishments are broken down by competition with foreigners, the capital invested in them is lost, thousands of honest and industrious citizens are thrown out of employment, and the farmer, to that extent, is deprived of a home market for the sale of his surplus produce. In the third place, the destruction of our manufactures leaves the foreigner without competition in our market, and he consequently raises the price of the article sent here for sale, as is now seen in the increased cost of iron imported from England. The prosperity and wealth of every nation must depend upon its productive industry.

The farmer is stimulated to exertion by finding a ready market for his surplus products, and benefited by being able to exchange them, without loss of time or expense of transportation, for the manufactures which his comfort or convenience requires.

This is always done to the best advantage where a portion of the community in which he lives is engaged in other pursuits.

But most manufactures require an amount of capital and a practical skill which can not be commanded unless they be protected for a time from ruinous competition from abroad. Hence the necessity of laying those duties upon imported goods which the Constitution authorizes for revenue in such a manner as to protect and encourage the labor of our own citizens. This policy would place the mechanic by the side of the farmer, create a mutual interchange of their respective commodities, and thus stimulate the industry of the whole country, and render us independent of foreign nations for the supplies required by the habits or necessities of the people.

[Pierce's third annual message, December 31, 1855.]

The principle that all moneys not required for the current expenses of the Government should remain for active employment in the hands of the people, and the conspicuous fact that the annual revenue from all sources exceeds by many millions of dollars the amount needed for a prudent and economical administration of public affairs, can not fail to suggest the propriety of an early revision and reduction of the tariff of duties on imports. It is now generally conceded that the purpose of revenue alone can justify the imposition of duties on imports; that in readjusting the impost tables and schedules, which unquestionably require essential modification, a departure from the principles of the present tariff is not anticipated.

[Buchanan's first annual message, December 8, 1857.]

The earth has yielded her fruits abundantly, and has bountifully rewarded the toil of the husbandman. Our great staples have commanded high prices, and, up till within a brief period, our manufacturing, mineral, and mechanical occupations have largely partaken of the general prosperity. We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country, in its monetary interests, is at the present moment in a deplorable condition. In the midst of unsurpassed plenty in all the productions of agriculture and in all the elements of national wealth we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want.

The revenue of the Government, which is chiefly derived from duties on imports from abroad, has been greatly reduced, while the appropriations made by Congress at its last session for the current fiscal year are very large in amount.

Under these circumstances a loan may be required before the close of your present session; but this, although deeply to be regretted, would prove it to be a slight misfortune when compared with the suffering and distress prevailing among our people. With this the Government can not fail to deeply sympathize, though it may be without the power to afford relief.

[Buchanan's second annual message, December 6, 1858.]

When Congress met in December last the business of the country had just been crushed by one of those periodical revulsions which are the inevitable consequence of our unsound and extravagant system of bank credits and inflated currency. With all the elements of national wealth in abundance, our manufactures were suspended, our useful public and private enterprises were arrested, and thousands of laborers were thrown out of employment and reduced to want. Universal distress prevailed among the commercial, manufacturing, and mechanical classes. Our manufacturers everywhere suffered severely, not because of the recent reduction of the tariff of duties on imports, but because there was no demand at any price for their productions. The people were obliged to restrict themselves in their purchases to articles of prime necessity.

In the general prostration of business the iron manufacturers in different States probably suffered more than any other class, and much destitution was the inevitable consequence among the great number of workmen who had been employed in this useful branch of industry. There could be no supply where there was no demand. The same consequences have resulted from similar causes to many other branches of useful manufactures. It is self-evident that where there is no ability to purchase manufactured articles, these can not be sold, and consequently must cease to be produced.

[Buchanan's third annual message, December 19, 1859.]

It will appear from the report of the Secretary of the Treasury that it is extremely doubtful, to say the least, whether we shall be able to pass through the present and the next fiscal year without providing additional revenue. This can only be accomplished by strictly confining the appropriations within the estimates of the different Departments, without making an allowance for any additional expenditures which Congress may think proper in their discretion to authorize, and without providing for the redemption of any portion of the $20,000,000 of Treasury notes which have been already issued.

Should such a deficiency occur, as I apprehend, I would recommend that the necessary revenue be raised by an increase of our present duties on imports.

The credit of the Government had been undermined by the preceding administration. The revenues had withered away without concern,

the public indebtedness had been increased, and money could be borrowed only at very high rates. When Congress met in December "the Treasury was empty, bankrupt. There was no money to pay the public creditors, who were then pressing for payment. There was not money to even pay members of Congress." The Secretary of the Treasury had authority to issue ten millions of Treasury notes at par to creditors or others at the rates of interest offered by the lowest bidder after public advertisement of not less than ten days. On the 18th of December he invited proposals for $5,000,000 of these notes. Offers at 12 per cent. or less were made for $1,831,000. The remaining offers were for $465,000 at rates ranging from 15 to 36 per cent. He did succeed in raising the small sum of $5,000,000 at 12 per cent. interest. (See letter on condition of the Treasury January 18, 1861, Mis. Doc. No. 20, Thirty-sixth Congress, second session.)

[Buchanan's fourth annual message, December 9, 1860.]

It is now quite evident that the financial necessities of the Government will require a modification of the tariff during your present session for the purpose of increasing the revenue. In this aspect, I desire to reiterate the recommendation contained in my last two annual messages in favor of imposing specific instead of ad valorem duties on all imported articles to which these can properly be applied. From long observation and experience, I am convinced that specific duties are necessary, both to protect the revenue and to secure to our manufacturing interests that amount of incidental encouragement which unavoidably results from a revenue tariff.

[Extract from the letter of John A. Dix, Secretary of the Treasury, to Hon. John Sherman, chairman of the Committee on Ways and Means, January 18, 1861.]

In answer to your inquiry as to the facts connected with the negotiation of the recent sale of Treasury notes, and how the proceeds were applied, I have the honor to state, that under the notice issued on the 18th ultimo inviting proposals for the exchange of $5,000,000 for Treasury notes, offers at 12 per cent. or less were made only to the amount of $1,831,000. Offers to exchange $465,000 for notes bearing interest at rates ranging from 15 per cent. to 36 per cent. were also received. The offers at 12 per cent. were accepted; those above that rate were declined.

Immediately after the decision of the Department on those offers had been made, the assistant treasurer at New York advised the Department that certain parties would take the balance through the Bank of Commerce at 12 per cent. This proposition was accepted on condition that the amount required to make up the $5,000,000 be deposited without delay.

The whole amount has been applied to the payment of overdue Treasury notes and other pressing demands on the Treasury.

(See Miscellaneous Document No. 20, Thirty-sixth Congress, second session.)

Repeal of Timber-Culture, Pre-emption, and Desert-Land Laws.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Wednesday, June 16, 1886.

The Senate, as in Committee of the Whole, having under consideration the bill (H. R. 7887) to repeal all laws providing for the pre-emption of the public lands, the laws allowing entries for timber-culture, the laws authorizing the sale of desert lands, and for other purposes—

Mr. PLUMB said:

Mr. PRESIDENT: There is some force in what my colleague has said about the relative merit of the settlement laws as they now stand upon the statute-book; but the Committee on Public Lands in adopting the amendment now before the Senate took into consideration the fact that there are considerable areas of land lying in the Rocky Mountains or in the adjacent region which can only be made agriculturally productive by the artificial introduction of water upon them, and that it was necessary for those areas to be put under cultivation in order that the adjacent population engaged in mining might thereby be supplied with food. It would be well enough of course in a way to say that we would not permit any more land to be entered under the desert-land law because frauds have been committed under that law as heretofore administered; but to say that none of the land lying in these secluded regions shall be so entered as to secure its reclamation and cultivation would be to compel the population engaged in other pursuits than agriculture to go a long distance to obtain their food supplies.

This is very material to them, and inasmuch as this land can not be entered under the homestead law, that is to say, in the absence of water artificially put upon it it can not be made the subject of entry under the homestead law, it was deemed wise to so amend the law as that it might be entered under conditions of reclamation, so that the productive area of the country might be increased and the local needs I have spoken of might be answered.

There would be no wisdom, I think, in saying that a tract of land upon which moisture never would be naturally precipitated to an extent to make cultivation possible should be left entirely untouched, never to be entered, continuing in a state of nature, when by a proper provision of law the land might be made cultivable by the introduction of water thereupon by means of a canal or ditch.

It is true that it is not necessarily nor in any obvious way the purpose of the land laws to stimulate production or to increase the productive area of the country simply for the purpose of adding to its aggregate production, but it is the wise and proper purpose of the law to so dispose of the public lands as that homes may and necessarily will be made upon them, and chiefly by those persons who, lacking in means for the purchase of land at even a moderate price, would otherwise be unable to procure sufficient land for the purpose to which I have referred and with which lands this amendment deals. Lands which require to be irrigated before they can be cultivated can not be homesteaded in the ordinary way. The average homesteader is too poor to dig the necessary ditch. It must be the result of associated effort, and the provision as now reported authorizes the individual settlers to combine for this purpose.

I do not agree with my colleague that frauds in the entry of public land under the desert-land act have been so great as he has stated them to be. No doubt there have been some, but the committee have reported such amendments as will wholly prevent them in the future.

Mr. INGALLS. I spoke only relatively.

Mr. PLUMB. There has been exaggeration with reference to the whole question of frauds in the entry of public lands. So much has been said and widely circulated to the effect that a large majority of public-land entries were fraudulent, that the public mind has become aroused and a feeling engendered which is very unjust to the frontier communities and to the individual entryman. There is danger that this feeling may contribute to the passage of unwise and injurious legislation.

The pre-emption law was passed on the 12th day of September, 1841. Under the operation of that law the States of Indiana, Illinois, Iowa, Wisconsin, Michigan, Minnesota, Kansas, Nebraska, California, and Oregon have been mainly settled. Dakota, Washington, and the other Territories have had the benefit of it. It has applied also to the States of Missouri, Arkansas, Louisiana, Mississippi, and Florida, and large areas have been and are still being entered under it in those States. That its administration has been accompanied by some frauds, even from its inception, I have no doubt. This fraud has not, however, been of a kind which involved serious moral turpitude and conscious wrongdoing, but only an evasion of the strict terms of the law, or rather I might say of the rules and regulations established by the Land Office for its execution; yet that the law has fairly accomplished its purpose the comparatively dense populations of these States will show. They contain more than one-half the population of the United States and contribute an equal proportion to the sum total of its agricultural production. A large proportion of this result may be fairly credited to the pre-emption law.

Certainly these results do not warrant the charge of gross fraud in the administration of the act of September, 1841.

I know something about the operation of the pre-emption law in the State of Kansas. That has gone on largely under my observation during the last thirty years. It is not a fact of importance to any one except myself, but still one which I at least may be permitted to here recall, that it will be thirty years to-morrow since I first set foot on Kansas soil. I was myself one of the beneficiaries of the act of September, 1841. Among my first ventures was the publication of a newspaper in a small town—no, not a town except in expectancy.

Like everybody else there I wanted a tract of land. That was one of the principal attractions, and so I located upon a quarter-section under the pre-emption law, built a shanty upon it, broke some acres of ground, planted some trees, cultivated a little corn, and so on, and made that, according to the manner in which men then operated, my home, and thereby in due time, as the result of such settlement and the payment of $200 in money, borrowed at 3 per cent. per month interest, obtained 160 acres of the public domain. Under the latter-day theory in regard to this law, under the general characterization which has been sent abroad all over the country by official sanction and utterance and in that sensational way which is characteristic of that which finds its way from official circles to the public prints concerning the land entries, I have no doubt that I committed a fraud upon the law; and still, in the sense in which it was then viewed and of the universal practice prevailing, I made my home upon that land, not a very good one, but as good a home as a person as poor as I was could make there or elsewhere. It was all the home I had, though I was printing a newspaper in a hamlet, now grown to be a city, a mile away.

When I had complied with the law as then understood by land officers and people, I entered the land and did not thereafter reside upon it, and in time the shanty I erected burned down. According to the practice and according to the law, residence after entry was not necessary, and I was not the only entryman whose needs were such that he was compelled to borrow money with which to enter his land and then work at his trade or other calling to earn money with which to pay the debt. Fortunately I was able to pay the debt I incurred and save my land until more than twenty years later I sold it to one more able to hold than I, and who paid me a fair price for it, but not enough to recompense for original cost, improvement, interest, and taxes. Generally speaking there was no speculation in lands procured at that early day, at least in that locality.

Under the administration of the pre-emption law not only were the

lands in Kansas settled upon under it in a large majority of cases in the utmost good faith for the purpose of home-making, but all except a handful are occupied now—nearly all highly improved as well, but not by those who originally entered them nor the descendants of them. There are 1,500,000 people in Kansas to-day, and it is safe to say that they are the result of the settlement in the State of at least three times that number; such has been the coming and the going, always the accompaniment of the growth in population of a new country. The first settlers of Kansas, as of all new countries, were poor in ninety cases out of every hundred. The condition of those who take up the public lands is one of poverty. No man can live off the product of his claim the first year; nor the second, unless he be equipped fully with teams, means to build a house, fences, &c. The bulk of the settlers, then, are obliged to seek work from those more fortunate, often at a distance in the town, on the railroads, &c.

Life is a hard struggle the first few years to the poor settler, and even often to those fortunate enough to have some means. Pioneering is hard enough under the most favorable circumstances. There is always disappointment. The burden falls first and hardest upon the wife. Sickness often comes; medicine and doctors are distant, often impossible to get. There is lack of every convenience and comfort, and often of necessaries as well. Change of climate, food, water, are material conditions; lack of society, absence of letters, papers, these make heart and body sick. Those who are called upon to experience those vicissitudes are new to the experience. Is it any wonder that often after a few months' struggle, perhaps after death has come to some member of the family, the discouragement becomes final, and it is determined to go back East to family and friends? Then the land is entered, the witnesses often being those who are similarly afflicted, and all go back together. The land is almost always and of necessity mortgaged to get money for the trip, or often sold to some one just come from the East, perhaps a little more financially fortunate than the entryman, or at least who had not yet become discouraged. Often the entryman left, intending to return, but, again disappointed, did not, and the land remained vacant for years. It would take far more time than the Senate has to spare to enumerate the main facts, even, which have made up the inevitable conditions attending the settlement of what we call our frontier—the acquisition of homes on the public domain.

Those who have not seen the operations of the settlement laws of the West, who have not seen the comings and goings that go to make up the settlement of the great spaces over which our population have dispersed themselves, and on which finally millions of people have made permanent homes, are ill-qualified to sit in judgment on the good faith which has accompanied that settlement at every stage.

Residence is a compound of fact and intent. The man who has his feet upon a piece of land with the intent to stay there, although he may change it ten minutes later, at the time when the fact and the intent combined was a *bona fide* legal resident there.

I do not know of any rule of law or of ethics ever applied which requires any man to have that intent longer than necessary to perfect his entry. It may be that he has simulated, that he has falsified in matters of detail concerning his settlement. In some cases I have no doubt it has been so; and still, after all, there has been one universal desire and intent, the controlling motive in the minds of nine-tenths of those who have settled on the public lands, and that is to get a tract of land on which to make a home; and the result which the law intended has come, and come permanently, as the farms of the West show, as is evidenced by 600,000 population of Dakota, the million in Nebraska, the million and a half in Kansas, and so on. Does any one believe that all this occupation is bottomed on fraud—that the school-houses, the churches, that all the belongings of a high civilization are the fruit and outcome of wholesale theft of the public domain?

The act of the 12th of September, 1841, has not been a disadvantage to the West, and the authors and finishers of that instrument of legislation need not be ashamed either of the intent in which it was conceived or of the manner in which it has been executed nor of the great results it has achieved. It has become the fashion nowadays to cry corruption about everything—to impute bad motives wherever possible—to always find a bad motive for an act rather than a good one, and upon one bad action predicate the general charge of corruption.

So it has been imputed to all the men—and I say all of them, because the difference between 95 and 100 per cent. is not worth mentioning—that all the men who have made entries of the public domain in the West have been moved by a corrupt motive and the defrauding the Government of the United States out of its public domain, and that motive has been carried out to the extent of from 90 to 95 per cent. of all the entries made.

I can not speak from personal observation for Dakota, nor Nebraska, nor Wyoming, nor Montana, but I can say that so far as this characterization has been applied to the State of Kansas it has been in substance and in essence false. I know that men have entered upon land about which they have changed their minds. I know that men who have come out on the frontier with the intention of staying have changed their purpose and gone back East; but it has simply been the ebb and the flow of that immense tide of humanity which has constantly crowded the frontier westward, and crowded it to stay, which to-day was at low tide and to-morrow was at high, and which has had only the variations in proportion and in line of demarcation which have attended the movements of population everywhere west of the Alleghanies. The first settlers were like the pickets of an army, often thrown back upon the main line, and the main line itself was sometimes thrown back, but finally it moved forward again; it never lost ground permanently, as the constantly receding frontier shows.

I was out on that frontier in my own State last fall to see the people who were building homes in what the maps and the chronicles term the arid region of the United States. How vividly I recalled my own first experience thirty years before, 200 miles east, in a section of country now highly favored. When the first settlers went into the vicinity of where I now live—and I was among the first—persons about Lawrence said, "You are going too far west; it never rains out there; crops can not be raised there." I was of a more hopeful temperament then than I am now. I do not know that I formulated the idea which I shall now express, that the earth was made for man, and that man could and would bring it all under his all-conquering dominion; but some how or other I made light of unfavorable climatic conditions and said I would chance it, as did all who went there then and later. We had the feeling which has carried thousands and hundreds of thousands of men too far out on the frontier; the feeling which my colleague has elsewhere in that felicitous speech for which he is noted called the "hunger for horizon"—the feeling which carries the New England man fresh from the green hills of his birth-place out on to the plains far beyond settlement, as a boat is carried by favoring breezes out on to the bosom of the ocean—and the man of the hills is most captivated by the prairies, and is as unmindful of the treacherous storms which will come upon him as he who sails the Atlantic when all is fair. It is this impulse which has carried men beyond the conditions that were favorable; but who shall challenge their right or denounce or deride them for the failure which overtook them?

If in my effort to make a home upon the northeast quarter, section 9, township 19, range 11 east, in Kansas, I had made a failure of it, if I had been fortunate enough then to have been married and in my despair had thought of my wife's folks in the East, and thought perhaps they would like to see me, I might have changed my determination as to making a home on that piece of land and left it, but it would not have made my original conception, nor my original settlement, nor my entry under that settlement, fraudulent.

No man who has not confronted the climatic conditions of that frontier knows anything about them. It was said of the year 1860 in Kansas that in that year there were thirteen months of dry weather. In the fall of that year more than one-half of its population left the Territory on account of the great drought—driven out because of inability to raise upon their farms the means of support. Thousands returned, but other thousands did not. Should they have been deprived of their land as a punishment? Any one going from the old settled and cultivated East, from its orchards, from its green slopes, from its pleasant waters, from all the concomitants and surroundings of a highly cultivated country, knows little—in many cases absolutely nothing—of what he has got to meet on that frontier where his contention is with nature and without help from his fellow-man. The climate changes in time. The line of the cultivable area, the line within which agriculture is possible, moves westward year by year, and yet so subtly, so changeably, so coquettishly, that it is only after the lapse of a quarter of a century oftentimes that it can be absolutely demonstrated that the line has moved and that the point to which it has moved can be actually pointed out and fixed and determined.

It is the pioneer settler who has caused the climatic change. His domestic fires sending their blue wreaths to the sky, the evaporation of the moisture held in his patch of "breaking," instead of being carried off on the natural surface as before his plow disturbed the sod, the trees planted about his door, have conquered nature. He may not live to enjoy the fruits of it; he may have succumbed in the struggle, but the generations who come after him will enjoy the fruit of his courage and his toil, and should "rise up and call him blessed." But now it is proposed instead to pillory him as a thief and a scoundrel! For myself I propose to put the pioneer in a wholly different category. He has been a public benefactor. His career has illustrated the virtues of enterprise and of courage and constancy.

The country owes him a debt, which it can never pay, scarce less than it owes to those who defended the Republic under arms; and the now abused pioneer performed his share of this service as well. He wrested an empire from the dominion of the desert; he has driven back the savage and brought him under subjection to the forces of civilization; he has added a cordon of new States, extending from the Alleghanies to the Pacific, to the galaxy of the imperial Republic without which it would still be the "shelving strip" which contended with the mother country in the days of the Revolution. It is too late now, when the country is in the enjoyment of the prosperity which his energy, his enterprise, and his courage has wrought, to characterize him as a thief and a robber for the purpose of party advantage. He is beyond the reach of petty assaults. His name and his achievements are part of our common history and are written on the pedestals of the nation's patriotism and those of its material growth and productions.

I am in favor of the repeal of the pre-emption law, and I have been

in favor of its repeal for many years, simply because I thought I could see more plainly perhaps than others who have not been upon the frontier how rapidly the public lands of the United States were being exhausted, and I did not want to live, as I do not now, to see the time when the changed condition of things will come to the people of the United States which will inevitably result from the fact that there are no more public lands subject to settlement. So I was in favor of limiting the quantity which an individual might acquire to 160 acres, and I am in favor of it to-day, not because I believe that 98 per cent., or 90 per cent., or 50 per cent., or 25 per cent., or 10 per cent. even of the entries under the pre-emption law have been actually fraudulent, but because I believe we ought, in view of the fast disappearance of the public domain, to attach new conditions to its disposal.

Growing out of this disappearance of the public domain and from the growth of the cattle industry there has latterly come to be a class of entries heretofore unknown. Persons desiring to get possession of the water of a certain section where grazing was good have employed herders and others to make the necessary entries under the pre-emption law with a view of having the lands transferred as soon as entered to the cattle company. While this class of entries have been infinitesimal in comparison with those honestly made, still they are not only made in gross violation of the law, but they establish a vicious principle and are especially to be reprobated.

The fact that such entries can be made is perhaps reason enough of itself why the pre-emption law should be repealed; and all entries so made should not only be canceled but the persons implicated in making them punished.

Now I come to another point. A great deal has been said not only about fraudulent entries but about the efforts and instrumentalities of the General Land Office to prevent them and to correct them. No doubt there has been in many respects a lax administration of the public-land laws. I remember once hearing an eloquent attorney before the Committee on Public Lands speaking of the law of Mexico in regard to its public lands. He said that every Mexican regarded himself as having title practically to an aliquot proportion of the public domain of Mexico. By reason of the great extent of our public domain heretofore and the liberal character of our laws on the subject of its acquisition men have come to regard themselves as entitled to a quarter-section of public land. They do not always, perhaps, refine upon the requirements of the law as they ought to do, but in nearly all cases, as I before said, back of the entry there is the purpose to make a home, a purpose which is finally realized either in the person of the one who makes the entry or of some one who, the entryman failing in his purpose, purchases from him.

The purpose of the law being thus certainly realized, accidental or incidental violations of its strict terms are of comparative unimportance. The administration of the law for all practical purposes became part of the law. Local officers of the Land Department, regarding substance and general outcome as of superior consequence, and taking account of the necessities of the settler, which required the earliest possible proof so that he might make other and necessary shift for the care and support of his family, or that he might make the land the basis of credit in order to obtain means for the purchase of stock and the improvement of his land, accepted proofs without instituting an inquisition which would operate merely to delay but which could not wholly defeat entries. Suddenly there came a change of administration, not only as to the *personnel* of those who administer the laws, but a change which is hostile for partisan and other reasons to all which has preceded its incoming, and now new, more stringent, and in some cases impracticable rules are to be applied to future entries, which is of little or no consequence, but they are to be applied retroactively and be used to cast discredit upon and to set aside entries heretofore made.

For this purpose special agents are employed, detectives, who, like all detectives, know that the justification of their employment is to be found in their discovery of frauds—a preminm upon their diligence in defamation—and, like other men of their class, liable to be "persuaded" as to their duty by improper means. And so out of the "spy" system now in full vogue, inspired by malevolence, the force is "organized to convict." But not organized to convict the wealthy cattleman who may have thousands of acres acquired fraudulently, but the unlucky squatter whose total possessions are in 160 acres, and who has no persuasive power.

This is what is going on now under the special-agent system, by which men, good and bad, under no responsibility, sit in *ex parte* judgment upon the property rights of their fellow-men. It is both un-American and outrageous, no matter how apparently right the action may be, for no real investigation can be had, as the special agents have no authority to summon witnesses, and the consequence is injustice to individuals having the Government muniment of title. Justice to the Government does not require the doing of injustice to individuals.

To take from one man a tract of land for which he has paid the Government price in order to give it to another with whom the Government is not in privity should never be done except after a full hearing before a tribunal having full power to summon witnesses. And yet thousands and tens of thousands of entries have been suspended upon mere suspicion and have been turned over to the Department spies for pretended investigation. Entries made many years ago, and which have been transferred many times to the hands of innocent purchasers, are suspended, whereby loss and injustice is done to innocent people.

Many entries, I think perhaps thousands of them, have already been set aside upon *ex parte* hearings, upon the reports of these special agents who had no authority under the law to summon witnesses or to administer an oath, and who could only hear unsworn and interested testimony.

I will read to the Senate the section of the Revised Statutes under which every pre-emption entry since the 12th day of September, 1841, has been made:

SEC. 2262. Before any person claiming the benefit of this chapter is allowed to enter lands, he shall make oath before the receiver or register of the land district in which the land is situated that he has never had the benefit of any right of pre-emption under section 2259; that he is not the owner of 320 acres of land in any State or Territory; that he has not settled upon and improved such land to sell the same on speculation, but in good faith to appropriate it to his own exclusive use; and that he has not, directly or indirectly, made any agreement or contract, in any way or manner, with any person whatsoever, by which the title which he might acquire from the Government of the United States should inure in whole or in part to the benefit of any person except himself.

The succeeding portion of this section names the penalties which shall follow false swearing, in addition to the ordinary penalties provided by the statute as a punishment for perjury; and what are they?

And if any person taking such oath swears falsely in the premises, he shall forfeit the money which he may have paid for such land, and all right and title to the same.

That is penalty No. 1; and penalty No. 2 is as follows:

And any grant or conveyance which he may have made, except in the hands of *bona fide* purchasers, for a valuable consideration, shall be null and void, except as provided in section 2288.

And section 2288 simply gives the privilege to the pre-emptor to convey his land for cemetery purposes, and so on. The penalty of the statute is that he shall forfeit the money which he has paid, and that, except in the hands of a *bona fide* purchaser for a valuable consideration, the title of the man shall be forfeited.

Judge Deady, of the district court of the United States for the district of Oregon, has recently decided, in a case which I had hoped to quote but which I could not find, it not being in the Library, that when once a certificate has been issued by the proper land officer it is not in the power of the executive department of the Government to recall it or in any wise to impair its value as a conveyance of the title of the Government; that it can only be set aside in a proceeding instituted in the name of the United States in the proper district or circuit court for the purpose. And in the case of Myers *vs.* Croft (13 Wallace, page 291) Judge Davis, recently the presiding officer of this body, and whose knowledge of the subject on which this decision was rendered and generally in fact of all questions relating to the public lands will not be questioned, adding to that respect to which he was entitled as a judge and as a man of great ability and conscientiousness a thorough knowledge of the public-land system of the United States, says, in narrating what the law is for the purpose of bringing himself up to the decision of the particular case in point, in commenting on this section of the Revised Statutes, which I have read, as follows:

This was felt to be a serious evil, and Congress, in the law under consideration, undertook to remedy it by requiring of the applicant for a pre-emption, before he was allowed to enter the land on which he had settled, to swear that he had not contracted it away, nor settled upon it to sell it on speculation, but in good faith to appropriate it to his own use. In case of false swearing the pre-emptor was subject to a prosecution for perjury, and forfeited the money he had paid for the land; and any grant or conveyance made by him before the entry was declared null and void, with an exception in favor of *bona fide* purchasers for a valuable consideration. It is contended by the plaintiff in error that Congress went further in this direction, and imposed also a restriction upon the power of alienation after the entry, and the last clause in the twelfth section of the act is cited to support the position.

I allude to this simply for the purpose of what I am about to say, to the effect that in this recent raid upon those who have entered public lands there have been acts committed which will result not in benefit to the United States, but in disadvantage and in injustice and wrong not only to men who have entered the public lands, but especially to the men who have purchased from them, which, in my judgment, will far outrun in their consequences and in their effects all the good that has grown out of this sudden change of policy or that can ever grow out of it. Litigation that will outlive the life of any person now living, certainly of any person now having a seat on this floor, will grow out of it, and the money that will be spent in costs and in the employment of attorneys will exceed in value all the lands in controversy.

Among the legal fraternity a great deal of contempt is expressed for what is called "judge-made law." This is a government not only of laws, but of written laws; and while there is committed to the executive department great discretion, especially in the administration of the land laws, at the same time finally the rights of all persons are intended to be settled by the words of the statute. It may be very nice and very enticing and agreeable for those who are charged with the administration of this law to tear it up root and branch and in the exercise of their brief power say that its stipulations, its requirements, the legal rights that have grown up under it shall not be observed and shall not be respected. That, in my judgment, is an evil greater than could ever have grown out of any ordinarily improper administration of the law. Congress makes or should make the laws. It is not

within the proper power of any executive officer either to suspend the execution of a law or to change its terms or qualifications or conditions under any pretense of public policy or public interest whatever.

As I have heretofore said, I am in favor of the repeal of the pre-emption law and have been for many years. One of the very first bills I introduced into this body was for the repeal of that law. It then had no public or popular sentiment back of it; the necessity of it was not as apparent to the great body of legislators as it then seemed to me, and it fell. I refer to that now simply for the purpose of showing that my opinion about this is no new one, but one that has existed ever since I have given attention to the subject. It was because I saw the time coming when by reason of the rapid absorption of the public domain there would be fewer chances for homes than there had been and than the necessities of the situation would require, and then the area which should be permitted to be entered by one person should be circumscribed. That I believed then as I believe now.

I am for limiting the acquisition of the public lands and all lands, so far as the Government can practically do it, to the actual necessities of the individual owning the same, to the land which he can properly cultivate and use with his own labor, leaving free in all other avenues the opportunities for speculation, but preventing in regard to the soil, for which it has been well said there is "no manure like the foot of the owner," so far as possible, speculation, and especially in those lands which form part of the public domain.

With reference to the timber-culture law, as my colleague says, the purpose of it was beneficent. If it had been carried out in the spirit with which it was enacted it would have been of inestimable benefit to all the vast space lying west of the Mississippi River which is denuded of timber; but almost inevitably it became at once the shelter of speculation. The persons who entered the lands were not required to settle upon them. The condition of entry was the planting and cultivation of a certain amount of timber. Of course time was necessary for the preparation of the ground for the planting of the timber. And during this time the person who had filed could not be brought to book, and generally before this period had elapsed opportunity presented itself for disposing of the right to enter to some one who wished to claim the land under the homestead or pre-emption law, and in almost all cases this opportunity was availed of, and so very few entries have been perfected under the timber-culture law, but the thrifty and provident persons who first claimed the lands for timber-culture purposes were enabled to dispose of their claims to good advantage, and I think not even 5 per cent. of all the entries that were made under the timber-culture law have been pursued to final entry under that law. They have been disposed of to persons who desired to enter the lands under other of the public-land laws, and thus the purpose of the law has been defeated; not with great and serious effect, because the land finally had to come under the operation of the settlement laws, but it permitted a speculation on the part of the person who made the original entry, not designing perhaps to follow it out, or having only a feeble design, which was opposed to the intent and spirit of the law.

Instead of that, if there had been an amendment of the homestead law requiring each homestead settler to plant one or two acres of timber around his house in some convenient place for shelter, so that instead of there being a little forest of timber on one section in each township there would have been a smaller forest on each quarter-section, it would have accomplished a better purpose. It is too late now to go back to that; and the committee propose to repeal the timber-culture law entirely.

I do not agree with the man who said that as posterity had done nothing for him he did not intend to do anything for posterity. I am willing and anxious to act with due regard for the coming generations; not too rapidly or with too much cupidity to exhaust the resources of the present and cut off all hopes for those who come after us. But there are to-day sixty million people upon American soil. The additions from natural increase equal 2½ per cent. per annum. The addition from immigration varies from half a million to a million and a half of souls each year besides. The present has some claims upon us as well as the future. He who can aid in so ordering things as that the man of his time and his generation shall be able to live in comfort reasonably as the result of his labor will deserve commendation.

I think that to-day the people now on American soil, now bearing the burdens and responsibilities of citizenship, and who now desire homes upon the public domain should have an opportunity to acquire them; and if they will go, as I would not, to the farthest recesses of the Rocky Mountains, into the little valleys and onto the foot-hills of the great ranges, and take small tracts of land of 40, 80, or 160 acres, making productive what before was absolutely unproductive for all purposes, and thereby give cheap food to the men who are unlocking those other resources of the Rocky Mountains, the gold and silver deposits, I would not prevent it under any sentiment that some other generation might thereby lose an opportunity. The present generation is entitled to a fair chance.

This bill, Mr. President, was framed with a desire to save to the actual settler who was willing to take and be satisfied with 160 acres of the public domain, and with a desire to do justice to outstanding obligations on the part of the Government. It protects all men who have initiated proceedings under any of the land laws of the United States; it protects all outstanding obligations in the nature of warrants and scrip which the Government has issued heretofore and made payable in public lands, and which, if it does not take up in the manner nominated in the law by the application of lands to their discharge, must be satisfied by money out of the Treasury.

We have provided as matter of detail that there shall be estoppel within reasonable time against the Government, that there should be some time within which the Government should be constrained from inquiring into the validity of titles which it had granted, and that thereby there should be security of title.

This bill, without seeking to interfere with the rights of the Government, goes as far as it can within proper limits to give that security of title, that stability which must be the foundation of social order and precede the march of progress. It recognizes the rights of innocent purchasers for value when such purchase and good faith shall be made apparent to the Land Department—which, as I believe, is only a recognition of rights already secured—and it sends cases of alleged frauds to the courts, where alone they can be tried as other issues are tried, by an impartial tribunal and with full power to secure and hear testimony.

I will not say that this bill is the sum of human wisdom; but the committee of which I am a member has labored over it faithfully. Perhaps they would amend it in some particulars if they had jurisdiction of it again, but substantially it is what they believe should be enacted. It represents at least the earnest judgment, the indefatigable labor of the committee, which has reason to say that it knows something about the practical administration of the land laws and of that which requires to be remedied. By this bill as a whole I am willing to stand or fall, and I bespeak for it at the hands of the Senate earnest consideration.

Treasury Surplus.

SPEECH
OF
HON. WILKINSON CALL,
OF FLORIDA,
IN THE SENATE OF THE UNITED STATES,

Friday, July 30, 1886.

The Senate, as in Committee of the Whole, resumed the consideration of the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

The joint resolution is as follows:

"*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That whenever the surplus or balance in the Treasury, including amount held for redemption of United States notes, shall exceed the sum of $100,000,000, it shall be, and is hereby made, the duty of the Secretary of the Treasury to apply such excess, in sums not less than $10,000,000 per month, during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government. The surplus or balance herein referred to shall be the available surplus, ascertained according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1886."

The joint resolution was reported from the Committee on Finance with an amendment, to add the following proviso:

"*Provided*, That no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned: *And provided further*, That the Secretary of the Treasury, in his discretion, may have in the Treasury, over and above the foregoing sums, a working balance not exceeding $20,000,000; and in the case of any extraordinary emergency, and when, because thereof, in the opinion of the Secretary of the Treasury, the public interests shall require it, he may, by written order, suspend the further call for the payment of such indebtedness for such period of time as shall be necessary to maintain the public credit unimpaired."

Mr. CALL said:

Mr. PRESIDENT: The resolution proposes to require the payment by law of a specific sum of money monthly upon the public debt of the United States, and not to leave it as it has been heretofore left to the judgment and discretion of the Secretary of the Treasury and the administration who shall be in charge of public affairs. If it were merely a question of holding a certain amount of money in the Treasury of the United States for which there was no well-ascertained public use it would be easy to dispose of it.

FINANCIAL CONDITION UNCERTAIN.

If it could be known as a certainty, as it has been treated by Senators here, as to what will be the financial condition of the country; if the reasons which they have given for forecasting the future could be relied upon with the confidence with which they assert them, there ought to be but little difference of opinion as to the wisdom and propriety of the resolution. I presume every one concurs in the proposition that no money should be taken by taxation from the people for which there is not an immediate public use. Certainly the proposition is a very plain one and does not need to be enforced by argument that to gather great sums of money from the people of the country and hoard them in the public Treasury will bring calamity and ruin upon the

country just in proportion as the amount withheld from the uses of business and life shall bear to the business of the country and the great bulk of its circulating medium.

THE OPINION OF PRESIDENT AND HIS SECRETARIES.

But the President of the United States and the sagacious man (and it is not always a politician who is the wisest man) who is at the head of the Treasury Department did not see this question in that light. Educated in the practical necessities of business, a man of strong practical judgment, of knowledge of affairs, he, with his First Assistant Secretary of the Treasury, who has shown himself in the communication which he has addressed to the Committee on Finance here to be a man of judgment and mind, regarded this question in a different light. They and the Treasurer came to consider it in the light in which the practical business men of the country regarded it. They regarded it as a question connected with the permanent and equal value of the different kinds of currency which are known as the money of this country.

The question to be considered before the Senate is not as to what amount of money can be spared from the ordinary disbursements of the Government. To so treat it is to look upon it in a narrow and impracticable manner. The question which addresses itself to my mind upon this subject is that which seems to have actuated the President, whose sincerity of purpose, whose desire to promote the good of the country at large, whose practical good sense I think are evidenced in his treatment of this subject, treating it as a subject distinct from the question of what may be the permanent future of silver coinage, but as a matter of present practical necessity, treating it as a question simply of preserving the interchangeable equal value of gold and silver and of the paper money of the United States.

DIFFERENCE BETWEEN GOLD AND SILVER.

Mr. President, to reason upon any subject there must be correct processes of reasoning based upon some ascertained facts, and those facts clearly ascertained can be alone the basis of any sound reasoning. Intemperate assertion, rash and confident opinions drawn from facts which do not warrant them, are not the basis of a calm judgment in regard to the finances and business of a country.

One fact presents itself to my mind as one that men who reason and who have judgment should attach some importance to, should measure and consider, and that fact is this: It is a fact ascertained and admitted that a pound of silver bullion is worth in the markets of the world about one-fourth less than the value as expressed by law of the coin which may be made from it. A pound of gold in the markets of the world is worth as much as the coin which may be made from it according to the prescribed standard of valuation by law. The value of this fact, the significance of it, the influence it may have on money and values are questions for the consideration of all thoughtful men, are subjects upon which Senators may well exercise whatever power of reasoning they may have.

It is a fact that a pound of silver bullion made into coin is worth one-fourth, or nearly one-fourth, less than the value which the law declares it to possess. A pound of gold made into coin is worth the full amount which the law declares it to possess. We have various explanations of this fact. By some it is asserted to be due to the want of an energetic effort on the part of the Government to increase the value of the one, by some to an effort to depress it, by some to combinations of great moneyed interests; but let the facts be what they may as the cause of the difference, what will be the influence of this fact and who shall guarantee that it will not be greater than it is?

SIGNIFICANCE OF THIS.

Mr. President, there are causes for this, but I shall not weary the Senate by entering at large into the subject. The significance of this fact is that it has so impressed the judgment of men, and none can reverse it by declarations, harsh invectives against the great interests which manage and control, whether rightfully or wrongfully, the business interests and industries of the country. The significance of this fact is that it has so impressed the agencies which control commerce and finance and industry and labor, be they good or bad, that they distrust the future of the one and perhaps appreciate too largely the future of the other. Admit all that has been said by the Senator from Kentucky and those who have argued this question, still the fact remains that there is a difference between these two tokens of money which constitute to a large extent the representatives of value in this country and in the world.

HOW SHALL IT BE REMEDIED?

If it be true that from some cause the fact is that as between these two great representatives one is one-fourth less in value than the value which the law declares it shall possess and the other is up to the standard and requirement of the law, it remains for us to consider by what means shall the declination of the one be prevented and its appreciation obtained. That is the first great question. The abundance of this circulating medium, which all admit to be a proper and wise subject for encouragement, is another question. The present question for us is how shall we prevent the declination of the one and secure its appreciation to the equal standard prescribed by law for the currency of the country, which by law is proposed to be so regulated that the one shall be the equal of the other.

Some Senators have urged that it shall be done by increasing the amount of the one, by making it unlimited. Suppose that proposition should be admitted, does it follow that there shall be nowhere a power left to prevent any abatement in the confidence of the people of the country in the one or the other? Does it follow that there can not be a want of confidence throughout the community and throughout the world in the one, and that that want of confidence may not be prevented by practical administration, by the Government being enabled at all times when there shall be an attempted appreciation of the one to pay out its gold dollars for the silver dollars—thus having the power (the greatest instrumentality of associated effort in the world, having the power to put millions of gold dollars as the substitute for silver dollars) to practically enforce to every man the idea that whatever may be the depreciation of this metal a great and powerful agency stands ready to make it good to the equal standard of the law.

In the argument of this question another very significant fact is presented, and that is that while the law prescribes an equal standard of value between two respective things, gold and silver, of certain proportions of weight and fineness, notwithstanding the law has made that a legal tender, notwithstanding there is always a vast multitude of contracts to be performed which by the law are dischargeable in silver or gold either at the choice of the debtor, notwithstanding this use is created by law, which is a great power, a use which can not be avoided, notwithstanding the law requires that all judgments, all failures to perform contracts wherever they are may be discharged in the silver dollar, still the silver bullion which constitutes that dollar is one-fourth less in market value than the gold dollar. With all the power of the Government, with the practical use to pay the revenues of the Government, with the practical use to discharge all future contracts and all contracts which are now to be enforced by judgment, still from some cause or other this fact exists.

Mr. President, I do not think it requires a great deal of reasoning to convince a man of sober judgment, who weighs facts as they are, that this depreciation, from whatever cause it has occurred, may continue, and that when it has gone to the extent of 50 or 25 per cent. there will be a diminution in values throughout this country the future effect of which no man can pretend to foretell. If that is not so, then the one may depreciate to nothing and the artificial uses which the Government by law may prescribe can still be carried on in a circulation which has no marketable value except for the purposes provided and required by law. This, in my judgment, is the practical view of this question.

THE FUTURE OF SILVER.

As to the future of silver coin, I am of the opinion, in my own humble judgment, that that is a future for which there need be no fear. I am of the opinion that the economists of the future will adjust these relations. How far it is within the power of the Government to maintain by law a fixed ratio between any two commodities is a question too large for discussion here. The reasoning man, the man of mind and judgment who weighs carefully causes and effects, may perhaps see in the future an abundant use for all the gold and all the silver coin that an unlimited coinage could supply. But it is a different question altogether from the proposition that the Government may by law prescribe a fixed and invariable ratio between the values of any two commodities. Those who have argued this question have argued it upon that basis and that theory, endeavoring to prove that by law or by a wise administrative policy the Government can preserve a fixed and inseparable ratio of value between gold and silver.

The taste and fashion of the world may prefer to-day silver or gold for all purposes of ornamentation, and yet they insist that while there may be a great and universal demand for the one and not for the other, the same fixed ratio of value between gold and silver will still exist, and that some process of administration, some process of compulsory use and necessity will be adequate to preserve that fixed and invariable ratio.

EQUAL VALUE OF GOLD AND SILVER AND PAPER.

This, then, to my mind is the question which reasonably addresses itself to the judgment of Senators. The proposition made by the Secretary of the Treasury in his reports, and antagonized by the specific provisions of the resolution of the House, is not one that concerns the future of the coinage of either of these metals. It is the simple proposition that there is in the United States in circulation something like $2,000,000,000 of gold, silver, and paper currency, three different kinds; that to preserve the equality of these different species of money is an object of great public necessity; that the disappearance in the practical uses of the country of that equality would bring great financial calamity; that the organisms of credit, the banks, the depositaries, the men who have accumulated and become the sources of credit, by any great depreciation in these different species of currency, will be deprived of a very large portion of their resources; that the debtors of the country, in whose favor so much is said, when they are compelled by law to pay their debts and have not the money to do it with, will become the victims of the most harsh and oppressive terms; that those who have money due to them, by the depreciation of this legal-tender coin, either gold or silver or paper, would be required to be paid in a currency that was not of value; and that, as they had made their contracts upon the basis of an equality in the value of these different species of currency, they might be paid in that which represented nothing; and that to depreciate silver would strike off from

$150,000,000 to $200,000,000 of the values of the country in the hands of its poorer people.

None will deny that this effect will follow from the continued depreciation of either one or the other of the several kinds of money commonly in use in this country. How is it to be prevented? It is to be prevented by a confidence in the public at large, by a confidence in other countries, a confidence in the great centers of trade, which, whether for good or for evil, have practical power in this country—a confidence that that depreciation will not occur. One powerful agency to prevent it certainly is that the Treasury Department of the United States shall be possessed of ample means to make the depreciated currency good whenever there shall be any want of confidence, anything extending to a panic, and that confidence will either exist or not exist according to the ability of this great agency to protect either of these species of money from depreciation of any kind.

To my mind there is no force in the suggestion that it is impossible that this will occur. The causes which produce a want of confidence are not within the forecast of man. They may occur with suddenness; they may be the result of combination; they may be the result of natural causes. They may come from wars; they may come from contingencies which can not now be foreseen.

I can see therefore no wisdom in this resolution, and I should vote against both these resolutions if I had it in my power to do so. I should leave it to the Secretary of the Treasury who has shown that kind of wisdom which is far beyond the wisdom of the politician, far beyond the wisdom of the man of letters, the practical knowledge of a well-informed judgment, of a sensible man conversant, thoroughly familiar, with the subject with which he deals. I know of no man who has exhibited more wisdom and more ability than the Secretary of the Treasury under this administration; and whatever differences of opinion I might have with him, I certainly should not condemn his judgment in advance or withhold from him a discretion to deal with this subject, being well advised and confident that every dollar of this money that could be spared from the public necessities would be appropriated suitably and wisely to the reduction of the public debt.

THE PRESIDENT WISE AND PRUDENT.

Neither do I see anything in the conduct of the President of the United States which should make us at all alarmed that there should be any want of wisdom and prudence in the administration of the finances of the country. He shares, as do the whole people, in the desire that the public debt shall be extinguished as rapidly as possible. He certainly has enforced upon Congress the necessity of reducing the taxes as rapidly as possible. His sincerity of purpose, his practical good sense, his energetic devotion to the performance of his duties can not be questioned. There is, therefore, no reason in the conduct of the administration and no reason in the practical wisdom of the things required to be done which justifies a resolution forcing the payment of $10,000,000 a month upon the public debt of the United States without reference to any of the exigencies that may arise in the conduct of the Treasury.

In my judgment this resolution predicated upon the idea that it may be done without any connection whatever with the interchangeable value of the different species of money that constitute the circulating medium of the United States is a dangerous error and without foundation. The reasoning is upon premises which do not justify it. You might admit every proposition of the Senator from Kentucky in his able speeches here, you might admit every proposition which the distinguished Senator from Colorado and the Senator from Kansas have made, and yet not touch the important question which is before the Senate, whether it is wise to deprive the Secretary of the Treasury of the United States of the power to protect either one of three species of currency belonging to the people of the United States from any cause which may depreciate it and to arrest the depreciation of the silver currency and the silver bullion which must carry with it the depreciation of the coin.

It does not touch the question of what means shall be provided to effect that important purpose, and whether the only means is not having in the Treasury of the United States a fund sufficient at all times reasonably to make good any amount of silver dollars which may be put in question by substituting gold for them in the administrative process of the Treasury of the United States.

FACTS TO BE CONSIDERED.

For these reasons, Mr. President, I should, if I had it in my power to do so, defeat both the House resolution and the Senate amendment. In the absence of that power I shall vote for the amendment.

There are certain facts which must furnish the basis of sound reasoning and true conclusions on this as on all other subjects.

Money has no intrinsic value as money. It can neither sow nor reap. It has not the power of production or invention. It is the creation of human invention and the offspring of the necessities and convenience of men, and therefore subject to the laws and regulations which they may make.

Its function is to measure and represent values, and it derives its function and power from the consent of the people of the community, state, nation, or nations where it is or may be used. This consent for its use depends altogether on its value, and the uses to which it may be put, and the permanence of this use.

When the Government coins metals of any kind for private persons into different denominations and delivers them to the owner of the bullion or metal out of which they were made, declaring by law that certain standard measures and denominations and proportions of weight and fineness shall constitute the standard coinage of a country, it does no more than this, and its declaration by law of these facts can give no additional value to the metal out of which the coinage is made or to the coinage itself. If the action of Government is confined to this declaration of the names or denomination of coin of different weight and fineness, it leaves every one free to use it or not use it; and the use or non-use of it will depend entirely on the advantage or disadvantage it may be to the individual. Every man will take that in exchange for his labor or the results of his labor which will answer his personal needs the best. If this should be the personal promise of some individual, he will take that in preference to any coin of any denomination or standard that will not serve his purpose so well, provided, of course, that he knows the fact.

These admitted and apparent facts show conclusively that money has no intrinsic and inherent power, whether it be metallic money, gold or silver, or paper money, but that it must be, of whatever nature it may be, the subject of wise arrangement, predicated on some ascertained and stable causes.

REGULATION OF COIN VALUE.

This was the former method of Government action and regulation of coinage and money.

The Government declared what should be standard divisions of coin and their respective weight and fineness, and having done this did no more. The uses and value of this coin, and the proportions of quantity and value which it should bear to production and labor and property, were left altogether to the voluntary actions of those who had occasion or necessity to use them and to the natural and business causes which affected them.

Under such conditions as these, namely, unlimited coinage of the metals for the benefit of individual owners, it is quite evident that the quantity was in no sense material except as its abundance or scarcity was a matter of convenience. The greater or less quantity which might be given for one or another value or commodity would be regulated altogether by causes with which the Government had nothing to do, and no concern, and which could in no way affect the people except in the convenience and facility which the abundance or scarcity of an accepted representative of values might afford.

USE, NOT LAW, MAKES VALUE.

It is therefore quite clear that the action of Government in declaring that certain standards of weight and fineness of certain metals, and the coinage of these metals and their proportions on account of the individuals who may own them, will never of itself constitute them money and make them representatives of value and the instruments of exchange and commerce.

It is also quite evident that if there be any commodity or product or thing which is of a universal value in a community, State, nation, or the world of commerce, and such commodity, product, or thing is susceptible of convenient division and subdivision and transportation—that coined or uncoined, divided or undivided by law—such a product or thing possessing these qualities will constitute, if it can be had, the accepted and reliable representative of value and instrument of commerce.

It seems, however, equally clear that the proportions or quantities of such commodities which would be given in exchange for any particular article will depend not only on the scarcity or abundance of the article to be purchased or exchanged or its proper and relative cost, but also on all the causes, both natural and artificial, which affect the product or thing with which the purchase is to be made; and that while abundance or scarcity, the needs for and the uses of a commodity or thing, and the relative cost of its production are the natural and proper elements which should determine the relative quantities which should be given for different things, and the cost of production is the only just and proper measure of values; yet other elements will determine largely the value when the article with which the purchase is to be made is subject in any way to artificial control or monopoly, or to fluctuations of scarcity or abundance.

It is also equally evident that the determination of values by the chance supply or the greater or less quantity of any one or more commodities without reference to the cost of production or the abundance or scarcity of other commodities is one of the results of the moneyed economies of the past, and that this evil is beginning to be remedied in part only by the systems of clearing-houses, by drafts on shipment, and by exchanges in kind through the instrumentalities of banking and commerce.

We have ascertained, then, that money as money has no intrinsic value; that its function is to measure and represent values; that the part which the Government performs is only to declare what shall be money and what shall be standards and proportions of weight and fineness of its coin and the name by which it shall be known; that all these offices being performed can not give value or use of themselves to money, and that any commodity of universal and steady value, susceptible of easy subdivision and transportation, will, by virtue of these qualities, become the representative of value and the means of exchange without the ac-

tion of government, which, when added to these qualities, will only facilitate and regulate its use.

THE QUALITY LAW GIVES TO MONEY.

What quality, then, is it which the Government can impart to money which renders it so important and gives to it such power over men and their lives and fortunes and makes it so often a ruinous factor or a source of benefit in the welfare of communities, States, or nations? If we can ascertain this we may, perhaps, discern its limits, and the facts and the learned opinions which have been brought to this debate, first by the Senator from Kentucky [Mr. BECK], and then by the Senator from Alabama [Mr. PUGH], and the Senator from North Carolina [Mr. VANCE], and the Senators from Texas [Mr. COKE and Mr. MAXEY], and the Senator from Louisiana [Mr. EUSTIS], and the Senator from Colorado [Mr. TELLER], and Mr. SHERMAN, may have their true application, and we may thus ascertain precisely what direction legislation should take in view of the new economies of a new age of industry—economies looking to the just rights of labor.

We may perhaps ascertain in how far these new economies by a better method may be supplanting the old method of measuring values by the abundance or scarcity of money, and substituting such measure by the cost of production, leaving to money as its chief function to furnish the convenient and ready standard of measurement and expression of value.

We may ascertain the meaning and importance of the statistics which show how small a proportion of the actual large exchanges of the world are effected by the actual use of money otherwise than as the mere expression of value, and how much larger a proportion of the small and every-day transactions of life and business are effected through its use both as a representative and a measure of the value of labor and the subsistence of labor. What, then, is the function which the action of government may give and has given to money, which gives to it such power and influence as to make its regulation and the declaration of its value a power of such great extent and influence?

LEGAL-TENDER QUALITY AND ITS EFFECTS.

The Constitution of the United States says Congress shall have power to coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures. No State shall make anything but gold and silver a legal tender for the payment of debts. The exercise of this power, the declaration by law that gold and silver shall be the current coin, and the regulation of its value, does not pretend to and can not enforce its use, nor confine business and exchanges to it, nor prescribe nor affect when used the quantities or proportions of value which it will bear to other things or values, nor make it a representative of value.

Neither does the fact of the actual use of gold and silver coin or bullion or any other commodity or value as money give to it its great power for good or evil, for it is manifest that to-day a community or people may be exchanging in different proportions values for gold and silver or any other commodity, and a year hence the proportions or values may change or some other methods of exchange may be adopted, and beyond the loss or profit that may result to those who have bought and sold and kept there is no material result, as the number of those who will hold and keep the representative or measure of value will be small as compared with the number of those who have used it and for whom it has performed all its functions. The great function then which the law imparts to money, which gives to it its great power and influence over the lives and fortunes and the welfare of the people, is its legal-tender quality—the power given by law of discharging all obligations and contracts by the delivery of agreed quantities and standards, and the compulsory exchange and transfer of the property of the debtor to the creditor, in all cases of damage or loss or wrongdoing, through judgment and execution at law.

The significance of this will be found in the fact that the debtors always exceed in large proportions the creditors; that the number of contracts to be performed in the future vastly exceed the number of those begun and completed at any particular time; that the contracts and obligations of men relate to the future more than the present, and of necessity must be performed in the future; hence the power of regulating and declaring the value of that thing alone in which they can be performed, and the exercise of it, constitutes the thing so declared a representative of value to the extent of this use.

It is true that the power to contract is left free, and men may contract to exchange commodities in kind or to receive drafts and notes of individuals, but still all failures to perform must be compensated in damages in the legal-tender money of a country, all judgments and executions and compulsory payments discharged and satisfied in it.

It is then the legal-tender quality and the compulsory payment of debts and obligations that give to money its power as a representative of value, so far as the positive precepts of the law or the action of the lawmaking power can effect it.

MONEY DERIVES ITS VALUE FROM ITS USES.

Money like everything else derives its value solely from its uses, and it is only by creating a use for it that the power of government or individuals can be of any avail. All the enactments of power and the devices of individuals can not give value to that for which men can find no adequate current use, and the value is purely in proportion to the facility, convenience, and permanence of its use.

When a government or an individual having need for any commodity or thing, whether wheat, or corn, or supplies, or bullion of metals, or coin, or drafts, or promissory notes, and having power to exact and compel the delivery of it, shall transfer this power to those who hold its obligations by the delivery of its promises which they agree to receive in place of or as a representative of the thing demanded, either in taxes or otherwise, they create a use and give a value to the promises thus issued. If the government has the power of exaction of three hundred millions a year, and the people are able to pay it, then the notes of the government will be of a current and universal use for this amount of value, and this use will constitute a value just as the use of any commodity will constitute a value; and this value will be limited to a particular community or country, or extended beyond it into other countries, precisely in proportion to the convenience of commerce and exchange. The value will exist and remain, and only be increased or diminished in proportion to the facility of its use in other countries and in wider spheres of business.

If this argument be true, money derives its value from the uses which may be made of it. These uses depend on its convenience of division and subdivision and transportation and the permanence and universality of its use and value, and this convenience of division and transportation and this permanence and universality of value and use may be created by the law to the extent of the income from taxes of a State certainly, and perhaps to a much greater extent.

CENTERS OF EXCHANGE AND DISTRIBUTERS.

It also appears that commerce has a law arising from necessity and convenience, from easy intercourse, by which it makes for itself centers of exchange, which become, as it were, clearing-houses for the settlement of balances in transactions, and which are a substitute for money and supersede its use for the bulk of transactions.

VARIATIONS OF MONEY VALUES.

We have also ascertained that all money and all representatives of value hitherto used in the shape of money or currency are subject to a double variation: first, in the value of the article bought, which finds expression in the money representative; and, second, in the differing values of the money representative itself, which may be caused by its abundance or scarcity, by the greater demand for it in one place than in another, by the facilities for its transportation or removal, and by the combinations which may be made for its control, its circulation, or withdrawal from use.

It also appears that the differing values of money as a representative of value have been and are the subject of unnecessary and arbitrary fluctuations and change caused by the devices of men, and that these, with the unnecessary and artificial fluctuation of commodities caused by the devices of interested men, are more powerful to-day in their combinations to rob labor of its just compensation and make all values and all property dependent on the will and interest of those who control those causes than they have been in any past time.

THE REMEDY.

To remedy these evils is and will continue to be a great object of intelligent legislation by the friends of the people.

The question before us is supposed by its advocates to be connected with the continuance or suspension of silver coinage, on the theory that there may be too much money, and that when there is much of one kind and but little of another, and the money of one kind is of much greater value than the money of the other kind, the one will drive the other out of circulation, and that this would be a great public calamity, and that the measure of value and the sale of values payable indiscriminately in either will be a loss to the seller and a gain to the buyer by enabling him to make payment always in the cheaper metal or money. It is also contended that by having a great abundance of what is termed the cheaper money, and but one kind of money in foreign countries, all balances will have to be paid in the kind of money in demand where the balances are to be paid, and this will be in the dear money, by virtue of which all the dear money will leave the country. To investigate these propositions we shall have to find out what is meant by cheap money.

CHEAP MONEY AS BETWEEN GOLD AND SILVER.

By what standard is its respective value to be measured? We shall have to apply the conclusions we have already reached as to representatives of value or money to balances between foreign countries, where the legal-tender quality of money does not apply, and where the law of relative values or commercial exchange does apply, where commodities find their exchange at their respective values in the country where the balance is made.

LONG USE OF GOLD AND SILVER, AND ITS CAUSES.

We shall have to commence this inquiry by ascertaining the true relations of gold and silver to the business of the world as money and the reasons for its long use as the measure and representative of values in the commerce and exchanges and transactions of the world, and in the course of this inquiry the facts which have been stated in this debate will find their appropriate place, and either refute or vindicate the opinions which have been expressed.

To what is the long use of the precious metals as the representative of value to be attributed? Certainly not to the fact that they are declared to be money and made into coin for convenience of use; nor to the fact that they are declared by authority to be a representative of value. Their valuation will neither create a use nor a desire for them, and without a use or desire for them by men the valuation of authority would be simply vain. They are precious because for some reason, as bullion, as metal, not as coin, they have always been an object of universal desire. This desire is predicated on their use and value for ornamentation and in the arts in the judgment and taste of much the greater part of the world. It is this universal use and desire for them and the comparative ease of their transportation that has made them as metals, as bullion, the measure and representative of value in all countries. Any other metal or commodity of the like qualities would have been and would be a representative of value equal to them in all these respects and all their uses, and would have divided their empire with them.

OTHER COMMODITIES AS REPRESENTATIVES OF VALUE.

What would have been the harm to the world or to business if there were other commodities of equal desire and equal general use with them which would make such other commodities equally a representative of value? What would be the harm if such other commodities were very abundant and easy to obtain. Men would exchange what they have for them because by reason of the universal desire for them they can be converted easily and cheaply into whatever they want.

Men would agree to take them as a consideration for labor and skill for the same reason. Government would make them a legal tender, because men contract to buy and sell and to take payment in them.

The Government coins and stamps them and declares the weight and fineness and regulates their relative value to each other as money, not their relative value to other commodities or other values. In respect to other values they can have no fixed relation, because the value of other commodities is regulated by their abundance or scarcity either natural or forced, by the cost of transportation, by the combinations made among men, by the demand and use for them.

FUTURE PAYMENTS OR EXCHANGES.

He who agrees to exchange anything and take payment at some future time in either gold or silver coin or bullion does so subject to the chance that its value measured in commodities or property may be either greater or less than it is at the time of the transaction.

But it is said that if a contract be to sell a value for so many pounds of bullion of either silver or gold to be delivered at a future time, then there is some certainty about it. No other risk is taken than that at the time of payment the value of the pound of bullion may be greater or less measured in the things it will then buy than it was at the time of the contract; but he who sells exchanges labor or property to be paid in either gold or silver, or where either is a legal tender, if there be a difference between the commodities which the two will buy, runs the risk of having his payment made in that one of the two metals which will buy the least and which therefore will be of the least value.

This is obviously true; and the result necessarily will be that men contemplating this contingency will, in their contract or sales, fix the amount or value of the thing sold at that price which the cheaper money will represent when measured by what it will buy.

Thus, for instance, if a man were to sell property, to be paid at some future time in so many ounces of gold or silver bullion, he would provide that such additional number of ounces of silver bullion more than of gold as its then or future value measured by what it would buy would be. But if he make a contract to take so many dollars for his property, and it be the law that either silver or gold dollars will discharge the obligation, and there be a difference in what gold or silver dollars will buy, unless he measures the value of his property by demanding the price for it equal to what silver dollars will buy, he might lose, and there will be then a gold value for property and a silver value for property, and by law the gold dollar and the silver dollar being each a legal tender of the same value all transactions will of necessity be based on the silver value; that is, the values of property will be increased to the amount necessary for silver dollars to cover it.

IS A FIXED RATIO POSSIBLE?

Now, the question for us to consider is how far this will be an evil, and whether it is greater than some other evils, and how far it is within the power of the Government to maintain a fixed ratio between gold and silver coin, and if so by what means they can do it.

If contracts by law were payable in either gold or silver bullion at their respective market values at the time of payment, and a legal tender at their measure of value, the difficulty would seem in this respect to be obviated, without injustice to labor or business. It is true the element of uncertainty as to amount of payment would rest on both sides, but it might be further reduced by making the market value at the time of payment to be measured by the purchasing capacity of either of the great commercial staples.

We have then a proposition that the Government can maintain a fixed ratio of value between certain different coins of differing qualities, and that this will be effected certainly by getting the consent of all governments to the proposition that so many grains of gold shall be of the same value as so many grains of silver; that is to say, if a government declares by law that 1 grain of gold is worth just 15½ grains of silver it will be worth just that much and no more.

Why this should be so does not appear, and why this should be so of gold and silver any more than it is true of any other commodity does not appear.

Suppose the Government by law declares that 1 bushel of wheat shall be worth 10 bushels of corn, and no more and no less, will this make it so?

Suppose when this law is made three-fourths of the wheat should be destroyed, and the corn increased three-fourths, and the demand and uses of wheat continue just the same, would the value of the bushel of wheat remain just the same, irrespective of the quantity or supply, or of the uses and demand for it? And if the value of the one bushel of wheat be increased or diminished by causes which do not affect in any way the value of the ten bushels of corn, and over which the Government has no control, how can the declaration by law that they shall be of the same value affect it?

I do not see that the consent of all governments that one grain of gold shall be worth so many grains of silver will any more make it so than the consent of one government will make it so.

It seems very clear to me that the respective value of gold and silver is created by qualities and uses which governments did not make and can not unmake, and that their relative value depends on causes peculiar to each.

There may be a demand for gold in the fine arts or for other uses at one time much greater than the ordinary demand for silver, and this demand will increase the relative value of gold to silver and decrease the relative value of silver.

How will the declaration by law that so many grains of gold coined and stamped as a dollar and so many grains of silver coined and stamped as a dollar shall be of equal value affect them in the supposed case? Let us see. We will suppose in the changes of fashion and the increase of luxury the demand for gold for the arts and for ornament and luxury should increase and that for silver diminish. The gold in the dollar and the silver dollar, for the purpose of paying debts, is of equal value; but the gold in the gold dollar, for the purpose of sale as a commodity, is worth twenty times as much as the silver in the silver dollar. Why will not everybody sell the gold dollar for use in the arts and keep and use the silver to pay debts and meet contracts? And how will the declaration of the Government, or of all governments and of all people, cause or prevent the fashion and taste of men from using the gold in the arts and preferring it to silver, or using silver in preference to gold?

But suppose all governments were to unite, if it were possible, to forbid and prevent the use of the precious metals in the arts or for any other purpose than money. How would this affect the matter and secure a fixed ratio?

A man in this condition of things has property of some kind to sell. What does he say when he proposes to exchange this for something else, or for coin? He says, what will be the value of this coin to me? The answer is, it can be used only for money; it has no other use or value. It can not be used in the arts nor for the support and comfort of life. Its use and value and purchasing power depend on the continuance of this agreement between the governments entirely. It depends on its legal-tender quality, and the quantities of which will be equal to other commodities in its purchasing power is purely arbitrary. It may be increased or diminished indefinitely. It is a representative of value only so far as it is a legal tender for debts and obligations, and the want of permanence and possible change and discontinuance will always disturb confidence in such a representative of value, while it is probably true that such a consent among nations in respect to the ratio of the precious metals would maintain it with some degree of stability.

IS A FIXED RATIO NECESSARY?

But why should there be a fixed ratio of value between the two metals? We have already seen that each can perform the functions of money at their market value as bullion as they have always done without a fixed ratio of value, and that is not within the power of Government so long as differing uses in commerce and the arts exist for either the one or the other, to secure a fixed ratio between them. We have also seen that for convenience of use and cheapness of transportation the two metals are placed on an equality by the use of certificates of deposit granted by the Government and issuable for any amount, and that this method of use and circulation is the same in all respects as if the coin itself was really passed from hand to hand. These several facts demonstrate the following propositions:

First. That gold and silver, by virtue of their relations to and uses in the arts and commerce, and by their convenience and ease of transportation and their intrinsic qualities, have a special and intrinsic value as representatives of value which we call money.

That to these qualities is due their long use for this purpose as a measure and representative of value. That a fixed ratio between them is not necessary to their performance of these functions, which may be

as readily done by their use as bullion at their respective market value as by a fixed ratio.

That the necessity of a fixed ratio has had relation and use only to this legal-tender power—an artificial use—and that this will be evaded whenever there is a difference of value and the amount of gold in a dollar will buy more silver than the dollar contains by making all prices based on the gold value of the silver in the dollar.

WHEN GOLD OR SILVER BECOMES MERCHANDISE.

This latter fact is proved by this statement: If the gold in a dollar will buy more silver than there is in the dollar in London or anywhere else, and the silver dollar will buy as much here as the gold dollar, why will it not pay any one to send the gold to London, sell it, and bring it back to the country in the shape of commodities—sugar, coffee, or anything else you buy—at the gold value abroad, which will buy just as much more as the gold dollar is worth more than the silver dollar; and unless by law you can regulate prices of commodities the price demanded here will be just that much more than the silver dollar is worth with profits and transportation and cost of sale added. If a man sends his gold dollar to London, worth there 20 cents more than a silver dollar, and buys 20 per cent. more silver than is in the silver dollar here, and brings the silver here, the Government says to him, "You can not use that silver here at its value abroad. We have a Government value by law, which makes it worth as much here as the quantity of gold in a gold dollar, and you can only get this for it."

This is only prescribing a price for it when used as money different from its market value even in this country, and is avoided immediately by seeking investment at gold values in commodities—perhaps in silver bullion itself—to be used in commerce and the arts at its market value, which is just that much more value when used for this purpose; that is, he sells his silver bullion which he has bought with his gold dollar at the market price, which is 20 per cent. more than the silver dollar, and thus realizes a gold value and a different ratio right under your laws to the contrary.

It is easy to see that this process may go on and the Government still maintain an arbitrary value of these metals by keeping up a fixed ratio for legal-tender, while a different ratio will exist for commerce and the markets; but this will be done at the country's loss.

If for any reason you make silver answer all the purposes of gold, and the market value of gold anywhere is greater than the rates fixed by law for silver, it is an injury to the holders of gold if they do not use it at its greater commercial value, and if silver can perform its uses as money, wise economy both for the state and themselves demands that they shall do it; and the Government, therefore, can not maintain a fixed ratio or relative value between gold and silver any more than it can between any other values. A greater value of either gold or silver bullion in any of the great markets of the world will make a difference in the value of gold and silver coin in all parts of the world.

LEGAL-TENDER LAWS MAKE VALUES ONLY FOR LEGAL TENDER.

Legal-tender laws will maintain and enforce relative values or a fixed ratio only for legal-tenders; but this will be avoided by fixing the contract price or money value in the cheaper metal or the greater amount, making allowance for the future depreciation.

PERMANENCE OF SILVER MONEY.

How is it then that France, as has been shown in this debate, with her successful industrial system, has always and still maintains both metals and a fixed relative ratio of value? And how is it that we ourselves have and are successfully doing so? And how is it that, as Mr. BECK has pointed out, gold has continued since silver coinage to flow in upon us in a continuous stream and to stay with us? How is it that a gold and silver dollar is equally with us the measure of values and that men deposit gold and take a silver certificate in place of it?

A proper consideration of these facts and their causes will not lead us to any conclusions adverse to the conclusions we have reached, but will serve to demonstrate the solid and incontrovertible grounds on which a sound currency must rest and how they go hand in hand with the use of both silver and gold in almost and perhaps altogether unlimited quantities as money.

How is it that the exclusion of either from use as money might be a calamity of vast and ruinous proportions, and the admission of both in unlimited quantities could only be a source of wealth and prosperity?

These facts will find their explanation and their cause first in the fact that silver, like gold, is a precious metal suited by its intrinsic qualities for the arts and ornamentation, an object of universal desire and demand, portable and divisible, and by reason of these qualities is in and of itself a measure and representation of value, and always will be, independent of and without any action of the Government. It is easily stored and kept and is not perishable, and therefore adapted by nature for accumulation and hoarding. It is to these qualities more than its legal-tender properties that its real use as money is due; but when the coinage and legal-tender use is added it is easy to see that an additional use is provided, and by nature's eternal law not gold or silver but use alone can give value to anything.

USE AND VALUE INTERCHANGEABLE.

We reach, then, a clear conclusion as to which there can be no contention—there can be no value without use. Human use and human values are eternally interchangeable. A use may be created by Government only to the extent of its own capacity to use. The uses of men for money are to measure values and represent values in other things, not for the moment but as permanently as possible, to the end only that the products of labor may be easily exchanged and transferred.

To give to anything the capacity of measuring another thing, and transferring it, we must understand that when I transfer to you a gold or silver dollar I only transfer to you a value which by comparison bears a relation to some other value, and when it is exchanged with another for something he possesses, it is only a barter or exchange of values according to the estimate each one places on the thing he has. The fact that one has money and the other has something else makes no difference. The gold or silver called dollars or half or quarter dollars is only a convenient device and substitute for pounds and ounces, grains and penny weights, and when paper is used it is only a promise to transfer so much quantity of value of commerce.

THEORY OF MONEY.

The theory of money, as I understand it, is that the people of a community, State, or nation select some product of man's labor as a common standard of value. This may be wheat, or corn, or cotton, or cloth, or gold, silver, lead, or anything else. To be a standard of value it must first have a value or use to every one, or to so many people that it will remain a value and be in constant demand, so that it may always be itself exchanged for anything that any one has. Second, it must be susceptible of division into small and portable quantities convenient for use and carriage. Third, it must be imperishable. The community find these qualities necessary to anything that shall be a common means or standard of exchange for their labor or products.

To test this let us consider if it would be possible for the community to take some thing or product that had little or no value, and by agreement of every man in the community agree that it should be a common standard of value, and that each person will take it for his labor or products. It may be copper or iron. The quantity is abundant. Every one can get it, and no one needs it except for the purpose of convenient exchange or measurement of value. The man who wants payment for a day's labor is offered payment in the iron or copper which he has agreed shall be a common standard. The question immediately occurs, How much copper shall I take for my day's work? What proportion of quantity shall be borne by one to the other, and how shall it be determined? Unless there be a value of the copper in its relation to other commodities fixed by its use and the demand for it, there would be no other method than for the community by law to fix the quantity of copper which should pay for the day's work and the quantities which should pay for everything else. This would be to fix prices of everything, or the relative quantities which should be given.

If such a system should ever be adopted, that of fixing by some common arbiter relative values, some much more convenient method than a common money standard and measure of value would be adopted. It will be observed that our modern system of exchanges for cotton and produce and stocks, and transfers on warehouse certificates and drafts and clearing-houses for values are to some extent in this direction. But if the Government were to stamp a certain quantity of iron or copper and lay a tax of a certain amount, payable in commodities in wheat, corn, or anything else, and agree to receive this copper or iron or corn for such amount, they might thus pay it out for any obligations they might have, and create a use to this extent and give it a value, and it would only be a promise to pay or deliver to this extent, and thus give a certain value to the coin.

To illustrate the nature of money and its relations to value and exchange and understand with precision and clearness let us suppose that all production of every kind was required in countries convenient to their production to be stored and certificates of deposit divided into small and large quantities delivered to each owner and the value of these products justly arranged each day in proportion to relative cost of production and quantity of supply and demand for their use.

It is quite evident that these certificates of deposit would be readily and conveniently exchanged by those who needed such things as they did not have. And the certificates of deposit of the article most needed and most in demand would be the most frequently transferred, and for this reason would be best suited for the use of those who did not wish to use the article deposited, but instead to keep it, provided the article to be kept was not perishable. This class of certificates would be readily received by the laborer and by every one else; and if an article greatly in demand and of necessary use was in much less quantity or smaller supply than others, it is quite evident that its relative value to others would constantly increase and the value of the certificates which represented it would steadily increase.

The certificate representing the commodity or product most in demand and not perishable would evidently be the current and preferred representative and standard of value or money. It is also evident that it would cease to be money or a representative of value when there ceased to be a demand for it. It is also evident that in proportion to the abundance or scarcity of this commodity would be the quantity of the products which would be exchanged for it.

It is a representative of value only because it can be and only so

long as it can be readily converted into other values. It can only be converted readily into other values so long as there is a use and demand for it. This use and demand may be either natural or artificial. And here we are to inquire how far an artificial use and demand may be substituted for a natural use and demand in making any article a commodity of universal use and demand and a representative of value.

ARTIFICIAL USE FOR MONEY CREATED BY LAW.

It will be borne in mind that being a representative of value is the special characteristic of money, and that the functions of mere exchange of commodities can be and are becoming readily and conveniently performed by other instrumentalities than money—by warehouse certificates which are assignable, by bills of lading, drafts on shipments, and the obligations of individuals or associations.

It is therefore the legal-tender quality or power created by law that gives to money an artificial or fictitious value. And this it will be seen is a powerful factor in creating a use and demand and value, but has its limits. Suppose Government and all governments were to declare that copper bullion or iron should be a legal tender in the payment of all debts now existing, unless the moral sentiment of the people by its non-observance should render such a law nugatory it would create a value for copper to the extent of existing debts, but it would not be a permanent representative of value to discharge future obligations, because the confidence in its permanence which comes from tradition and long use, and the observance of natural value and use and demand which comes from it, would make people avoid its use and make exchanges in kind and substitute other methods and representatives of value.

If such a law could have an instantaneous effect it would give to the laborer for his day's work something which would not be a representative of value, and the aggregate of the amounts thus paid would be vastly more than all others, but its disastrous effect would be on those who own the sources of supply, the owners of commodities who had placed them on the market and distributed them on the faith of getting a value for them in other commodities. Money, then, is a permanent representative of value, so far as Government is concerned, solely because of its legal-tender power. And it is a grave question whether in the future economies anything but that which is agreed on or contracted for should be a legal tender.

EFFECT OF THE ABUNDANCE OR SCARCITY OF MONEY.

Let us consider, then, the effect of the abundance or scarcity of any commodity which is a measure and a representative of value, for it is solely in its quality as a representative of value, whether it comes from its legal-tender power or from other causes, that we are concerned with money.

It is upon this quality of money that its good and bad uses depend; and by virtue of this it is that the ingenuity of men has made it a device and means for appropriating the labor and profits of the great body of the people and holding them in a subjection as hard and perhaps more oppressive than the milder forms of slavery—the subjection of want and suffering.

ABUNDANCE OF MONEY.

It may be very abundant; its relative value to other things will be less than if it were very scarce; that is, you will give more money for a pound of cotton, corn, or wheat, or for a day's labor than you would if it were scarce. But how would this affect the relative value of corn, wheat, cotton, and labor to each other? The seasons will not change nor the soil either lose or acquire more fertility, or labor become steadier and more skillful because of the abundance or scarcity of money. All the causes which affect the relative value of these commodities to each other can not in any way be affected by the abundance or scarcity of money. What good or what harm will the fact do that a larger quantity of money will have to be given for these commodities? It is quite manifest that this fact would neither injure nor benefit any one.

If any one should be injured it would be the person who owned the money, which in relation to other things or its purchasing power, as it is termed, would be of less value. Hence it is very clearly the interest of those who own mines or have hoarded money or deal in money that it should not be too abundant, and that they should regulate its quantity. It is said the abundance or scarcity of money creates speculative values, or uses beyond the natural use and demand. And this is an evil inasmuch as these values will not be permanent, but their permanency will depend on the permanency of the abundance of money, and the relative value of commodities, at even an inflated value, can not be disturbed by the abundance of the representative of value or of money. The abundance of money can only affect values, whether real or speculative or inflated, by being exchanged or paid out for labor or commodities or products of labor.

Let us consider, then, how this occurs. The natural wants of men lead them to labor, for they sow and reap, and harvest and manufacture, and have as a result the products of the field, the forest, the sea, and the workshop. For all this nothing but labor and nature are necessary. Money of gold and silver or anything else can not produce these results. They are the result of nature and labor and the qualities of man. Having these products, they are to be exchanged in the quantities desired. Among them is a commodity of general and universal use and desire, which becomes, by virtue of this universal use and demand for it, and of its imperishable quality, a representative of value.

This is one of the products of labor, and its relative value to other commodities is measured just as they are, by the amount of labor it took to produce it, and by the use and demand for it. Its only natural use is for ornamentation or for art, but this is found to be a universal use and demand. The exchange can be made without it, but by degrees it is found to be a convenient use for effecting the exchange of these products. And so it is that in this community the miner gives his precious metals, valuable only for art, for other commodities, and being imperishable it is a product and a value both for ornament and for exchange.

The amount of this product depends on the labor invested in it and its chance discovery and production. It is not a necessary means of exchange nor a necessary representative of value, nor has it any arbitrary power of itself to alter values or change the relations of other products to each other.

On the basis of permanent use and value, supplemented by and intermixed with other means of effecting exchanges, commerce has given permanent use to the product of the mines as a representative of value. Left to itself and to natural causes and to the relations of business, money would only bear its part in the exchange of commodities and as a measure of value, and be only of beneficial influence. Its value, like anything else, and its relation to other commodities would be regulated by natural causes, that is, cost of production, abundance or scarcity, and use or demand for it. But on the basis of this natural use Government has intervened certain arbitrary influences by making by law a particular commodity a legal tender, requiring that all debts, interests, and obligations be discharged in it. How far it was wise to interfere with the perfect freedom of contract or to seek to create an arbitrary value and use of a product of uncertain quality, and sometimes of impossible procurement, is a question which the wise and better economies of an age soon to come will determine for itself.

In connection with this resolution we can see that a power by law and custom now exists which compels all transactions to be paid and satisfied in legal-tender gold and silver and legal-tender paper money, and that the abundance and equal interchangeable value of these several kinds of money is of the greatest and of equal importance; and whatever causes shall have the effect of withdrawing either of them from circulation by destroying the confidence of the people in either, and thus making that one which remains the most valuable the object of general and extensive desire, will be to limit and confine the use of the cheaper metal to the single purpose of paying such debts as may have been contracted before its depreciation, or to such debts as may be contracted on the basis of a future depreciation.

It is clear that on this basis the end would be soon reached when the cheaper and depreciated coin would cease to be used as money and the dearer metal and substitutes based on it would become the sole circulating medium, and the legal-tender law be avoided by the cessation of all credits and contracts to be performed in the future.

We are led to the conclusion that in whatever view we may regard money, with its great power over the business and happiness of all the people, with the facility and success of combinations to affect its value, whether it be by an interference with the fixed ratio prescribed by law or in other ways, the preservation of the interchangeable value of gold and silver is an object worthy of the efforts of the Government, and the treasure that may be necessary to be used to accomplish it is neither idle nor unemployed in the interests of the people.

Trade-Dollars—They Ought to be Redeemed.

SPEECH

OF

HON. GEORGE E. SENEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886,

On the conference report on the disagreeing vote of the two Houses on the amendments of the Senate to the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. SENEY said:

Mr. SPEAKER: Soon after the formation of our Government Congress authorized the coinage of a silver dollar and fixed its weight at 416 grains of standard silver. The law was passed in 1792, and was approved by George Washington, then President of the United States. This law was in force forty-five years. The number of silver dollars coined during this period (1792 to 1837) was 1,440,517. All of this coin, except one thousand pieces minted in 1837, was coined before 1806.

The Congress, in 1837, reduced the weight of the silver dollar from 416 to 412½ grains of standard silver. The law making this change was approved by Andrew Jackson, then President of the United States. It was in force thirty-six years. While in force, 6,605,321 silver dollars were coined.

The coinage of silver dollars under the law of 1837 ceased in 1873,

and was resumed five years later under the law of 1878. Our total coinage of silver dollars in eighty-one years (1792 to 1873) was 8,045,838. Of this number, I repeat, 1,440,517 were coined under the law of 1792 and 6,605,321 under the law of 1837. The former contained 416 grains of standard silver and the latter 412½ grains. While the dollar of 1792 contained the most silver, its money value was the same as the dollar of 1837. Both were a legal tender. The silver dollars coined under these two laws were current money at all times and in all places. Never, at home or abroad, was either at a discount. In our own country these silver dollars, prior to 1861, commanded a premium. The best paper dollar we had was below them in money value.

Perhaps no coin ever minted by the Government was prized as highly by the people as the silver dollar of our fathers. The dollar of Washington and the dollar of Jackson are the endearing names given to the dollar of 1792 and the dollar of 1837 by the American people. Few, very few, of the Washington dollars remain. Long ago they ceased to circulate as coin. Of the 6,605,321 Jackson dollars put out between 1837 and 1873 many are lost—lost by shipwreck, by fire, and by other casualties. Many have been consumed in the arts and in the manufactures. Thousands and thousands have gone into the melting-pots to be minted into subsidiary coins. A large number no doubt are in foreign countries—some to return, others to stay. Many of these dollars are hoarded, and not a few are held as keepsakes. The number of these coins at home or abroad in 1873 it is impossible to state. The number is believed to be small. We all know that none were in circulation.

For the twelve preceding years there were no silver dollars in circulation. From early in 1861 until years after 1873 the business of the country was transacted with paper money. Coin during most of this period commanded a high premium. During the war it centered in the hands of a few and seldom was any seen, except in some hiding-place. During the period to which I refer there were among our own countrymen millions whose eye never saw and whose hands never touched a piece of coin, either silver or gold. Never before in our history had the coin in our country been so completely hid from public view. Years after the close of the war, when silver coins again circulated, they were at first great curiosities. Well do I remember hearing a young man remark that he had never seen any silver coin. This was long after the war. No wonder. At the outbreak of the war the young man was a child.

Unquestionably one of the country's most pressing needs in 1873 was more silver dollars. Of the few then outstanding none, I repeat, were in active circulation. Then the business of the country was transacted without the aid of silver dollars. Now they are indispensable. This is shown by the fact that during the past seven years 231,257,594 have been coined by the Government at its mints. Our paper currency in 1873 was irredeemable, and about $732,000,000 was outstanding. The law of 1837 was then in force, and the silver dollar it authorized to be coined was worth in the legal-tender paper money of the United States (greenbacks) a premium of 11 to 17 per cent. Nothing stood in the way of executing this law. No legislation was necessary. A mere executive order would have put in motion all the machinery used at the mints for the coining of the dollar of 1837. Surely nothing could have been more pleasing to the people than the continued coinage of their favorite dollar.

This coin was no experiment. For thirty-six years it had met every want and satisfied every expectation. It was a complete and perfect success—a success in peace and a success in war.

The farmer and the mechanic, the day laborer and the wagemen and wage-women of our country were content with the dollar of 1837. Among all industrial classes the Jackson dollar had not a single enemy. The Democratic party was its friend. Outside of that party were those who disliked the Jackson dollar. They disliked it because they disliked those who made it. To them this Democratic dollar had no charms. Their delight was in a dollar called by some other name. The enemies of the dollar of 1837 were the friends of the dollar of 1873.

The Jackson dollar was dropped from the coin-list and the trade-dollar put in its place. The law consummating this great wrong was passed February 12, 1873. At that time the Republican party was in the full and undisturbed control of every department of the Government. Of the more than one hundred thousand office-holders whose names were then upon the Government pay-roll, all, with a few unimportant exceptions, were representative men of the Republican party.

The trade-dollar law was approved by Ulysses S. Grant, then President of the United States. It passed the House of Representatives, composed of 134 Republicans and 104 Democrats, and of which James G. Blaine was the Speaker. In the Senate the presiding officer was Schuyler Colfax, then Vice-President of the United States. In that body were 52 Republicans and 17 Democrats.

Who, then, but the Republican party is responsible for the coinage of the trade-dollars? Had the men in that party who favored trade-dollars and now oppose redeeming them at their par value stood for the Jackson dollar no trade-dollars would have been made. All that were made, near forty millions, are still outstanding, worthless as money, but good as merchandise, at one-fifth less than their par or face value. The Republican party, I repeat, is responsible to the country for the trade-dollar.

The law authorizing its coinage was passed by Republican votes, in a Republican Senate and in a Republican House, and was approved by a Republican President. The Republican party, through its office-holders, executed the trade-dollar law. Every Government official who assisted in getting trade-dollars into circulation, whether at home or abroad, was a member of the Republican party.

The trade-dollar law is a part and parcel of the financial legislation of the Republican party. Had the trade-dollar proved a success the Republican party would, in the language of all its platforms, "pointed with pride" to the trade-dollar law as one of its financial achievements.

The law was a very great failure. So, too, was the trade-dollar. Let the responsibility for flooding this and other countries with trade-dollars rest where it belongs.

The trade-dollar law was passed in February, 1873. In less than two years thereafter 3,588,900 trade-dollars were coined at the United States mints and passed from the hands of the Government to the hands of the people. In 1875 and 1876 there were 11,829,550 coined. In the two years following (1877 and 1878) the coinage was 20,540,910. For six years the law was in active force, and during this period 35,959,360 trade-dollars were made by the Government at its mints to be circulated as money at home and abroad.

Of this coinage $15,418,450 was under the administration of President Grant and $20,540,910 was during the time Mr. Hayes was acting as the executive head of the Government. Each and every one of these trade-dollars is in bad repute. None are current. All are depreciated. Their par value is $1. Their money value is 20 cents less than a dollar. This experiment in finance foots up a loss in dollars and cents of $7,191,872.

The loss in good name and high honor and true faith admits of no estimate. Upon whom shall this loss of $7,191,872 fall? Shall the loss be made good by the Government retiring these trade-dollars at their par value, or shall it be borne by the holders of this coin?

Ought the trade-dollar to be retired? This is not a new question. My information is that in each Congress since 1876 bills were introduced providing for retiring the trade-dollar. They were referred to the proper committee, and in committee they slept quietly for the remainder of the session.

In the first session of the last Congress a bill to retire all outstanding trade-dollars at par passed the House April 1, 1884. The vote stood 198 yeas, 45 nays, 79 not voting. Two days thereafter the bill was before the Senate and was referred to the Finance Committee. In this committee the bill was permitted to sleep the remainder of the session, which ended in July. About five weeks (January 28, 1885) before the final adjournment of the last Congress the bill with amendments affecting the coinage of silver was reported to the Senate. General debate followed, and the Senate closed its labors on the 4th of March without voting for or against the bill.

In the debates in that body last session strong ground was taken against the passage of the House bill. Senators said that the Government is under no obligation to redeem the trade-dollar, and for this reason opposed the bill. The argument is that the trade-dollar is not a Government coin, and therefore the Government is under no obligation to make good to the holders their loss.

Is the trade-dollar a coin of the United States? The answer to this question is found in the Revised Statutes. Section 3513 provides that "the silver coins of the United States shall be a trade-dollar, a half-dollar, or fifty-cent piece, a quarter-dollar, or twenty-five-cent piece, a dime, or ten-cent piece." That half-dollars, quarter-dollars, and dimes are by this section made United States coins no one disputes.

Why, then, is not a trade-dollar a United States coin? Section 3511 of the same statute provides that "the gold coins of the United States shall be a one-dollar piece; a quarter-eagle, or two and a half dollar piece; a three-dollar piece; a half-eagle, or five-dollar piece; an eagle, or ten-dollar piece; and a double eagle, or twenty-dollar piece." Are not each of these coins of the United States? The same statute, section 3515, provides that "the minor coins of the United States shall be a five-cent piece, a three-cent piece, and a one-cent piece." Are not these, too, United States coins? If not, why? Most unquestionably all of these coins are coins of the United States. The law so enacts. If they are not, then there are no United States coins. Except foreign coins, our laws know none other. These coins of our Government stand upon equal footing. If one is a Government coin, so, too, are each of the others.

If the trade-dollar is not a United States coin, then neither of the others are entitled to that name. The trade-dollar had debt-paying power, and this, under our Constitution and laws, made it money. Bullion has no such power. Congress has exclusive power over coinage, and whatever is coined by its authority is, necessarily, Government coin. The weight and fineness of all our coin, including the trade-dollar, are prescribed by law. All are made at the Government mints and with the labor of Government employés.

The same devices, legends, and inscriptions required to be put on the trade-dollar are found upon all the coins of the United States, except the one and three dollar gold pieces, and the dime, the five, three, and one cent pieces. Upon these excepted coins the figure of the eagle

is omitted, and weight and fineness are not required upon any coin except the trade-dollar.

While the law authorizing the trade-dollar was in force that coin had the same identical place in the statute-book which for thirty-seven years before had been occupied by the standard dollar of 1837. If the latter is a coin of the United States, and this no one denies, why is not the former? From 1873 to 1878 the only silver-dollar piece made at the Government mints was a trade-dollar. Our laws, during those six years, provided for the coinage of no silver-dollar piece except the trade-dollar.

If the trade-dollar is not a Government coin, then it follows that the only silver dollars of the United States in circulation or outstanding in 1873 and in 1878 were those coined prior to 1873, under the laws of 1792 and 1837. Few of these, we have seen, were then in circulation. The further coinage of silver-dollar pieces was in 1873 one of the urgent demands of that time.

In meeting this demand the Congress changed the silver-dollar piece of 1837 in a few and it may be unimportant particulars, and provided for its coinage as changed under the name of a trade-dollar. In weight and fineness the old and the new dollar differ. In width and thickness, in form and appearance, they are substantially alike. The face of the one, like the face of the other, shows a dollar piece. To the unpracticed eye the difference between the two coins is not readily distinguished.

It is only upon close inspection that the real difference appears. Both are coins of the same Government and made only by its authority. It is not among the possibilities that the one is a Government coin and the other is not. Both are money, and both were intended for money by the coining power. Like all the Government coins, a trade-dollar was made a legal tender in payment of debts. All the gold coins of the United States are legal-tenders without limitation in amount.

The trade-dollar law made that coin a legal tender in amounts not exceeding five dollars in any one payment. This provision was in force for three years and more and then it was in effect repealed. All the other silver coins of the United States are legal-tenders in like amount. So, too, are all our minor coins not above 25 cents in one payment.

It is evident that in enacting the law the same value was given to the trade-dollar as the law then existing gave to all other silver coin.

In sums of $5, or less, the trade-dollar was made equal in value, dollar for dollar, with either of our gold coins. In legislating the trade-dollar into the coin-list what more could have been done than was done to make it good and lawful money of the United States? Manifestly, the Government did all it could do to make that coin the silver-dollar piece of the United States. To counterfeit a trade-dollar is a felony, punishable by heavy fine and long imprisonment.

Counterfeiting either of the other coins of the United States is a like offense and punishable in like manner. All general legislation respecting United States coins applies as well to the trade-dollar as to either of the other coins upon the list. There is no legislation special in character which makes a trade-dollar in any material respect different from the other silver coins of the United States. In giving it legal-tender value Congress made it coin.

In taking this value away, three years later, Congress made it bullion. The law is still on the statute-book. It has never been repealed. Why, then, is not the trade-dollar a Government coin? Can there be a doubt that in enacting the trade-dollar law that it was meant and intended to better the dollar of 1837 and make it, under a new name, the silver-dollar piece of the future? The dollar of 1837 then was at a high premium and unquestionably was the favorite coin of the people.

The enemies of this dollar were bent on legislating it out of the coin-list, and equally bent on legislating something else into its place. More and finer silver, it was thought, would give the trade-dollar a value above that of the old dollar piece. An increase in weight and quality was well calculated to accomplish this end.

With two silver dollar pieces in circulation—one containing 420 grains of silver and the other 412½ grains—it might well be expected the former would speedily drive the latter into the melting-pots and leave the field clear for the trade-dollar.

But, probably, that which more than anything else secured for the trade-dollar popular favor both at home and abroad was the inscription upon its face, "In God we trust." These words express better, perhaps, than any others the religious belief of our people. Certainly there could be nothing upon our coin more appropriate and nothing that would inspire more confidence in the integrity of our Government.

Our own people, and people of like faith everywhere, looked upon this inscription as a covenant of the Government that the trade-dollar was one of its coins, and that its par value would be always and ever maintained.

In the execution of the trade-dollar law its friends had everything their own way. Taking advantage of the demand for silver-dollar pieces they pushed the coinage and the circulation of trade-dollars by methods known and unknown.

Nearly thirty-six million were made and put into circulation by the Government within five years—almost five times the number of silver-dollar pieces coined and circulated in the preceding eighty-one years. Daily, from 1873 to 1878, the Government mints turned out twenty thousand trade-dollars. The coinage was forty each working minute for a period of nearly six years.

In July, 1876, 15,631,000 trade-dollars were in the hands of the people. Each one of them was a full legal tender. Used singly or five at a time they had all the money value it was possible for the Government to give. In stamping upon the face of each of these money pieces the words "trade-dollar" the Government said to all to whom they might come, this is a good and lawful dollar of the United States.

Upon the faith of this imprint these coins were taken from the Government and passed from hand to hand among the people in every part of the country. The law, it must not be forgotten, obliged every one to take these trade-dollars at par. Labor, skilled and unskilled, was paid its wages in trade-dollars. They paid for the products of the farm and of the workshop. At the butcher's and the baker's, with the grocer and the shopkeeper, and at market places they were current coin.

In the face of all that the Government has said and done respecting the trade-dollar are we under no obligation to make good what the people have lost by the depreciation in this money? Is not the Government bound to make good to the uttermost the gold coins made at its mints? Who will say that our silver coins less than a dollar are not the money of the Government, or that in honor the Government is not bound to keep them at par at all times and under all circumstances? If there is any obligation upon the Government to maintain the par value of our fractional silver coins, equally binding is the obligation to make good the trade-dollar.

For the redemption of the circulating notes of the Government (greenbacks) the faith of the Government is solemnly pledged. Equally strong should be the pledge respecting all of the coins of the Government. Look into the statute-books and you will find that the Government is obligated to redeem national-bank notes when their redemption has been refused by the issuing bank. Those who held trade-dollars when they fell below par have a stronger claim upon the Government to have their loss made good than have the holders of national-bank notes for the payment of their bills in case payment is refused by the bank.

There is every reason why the Government should redeem its own issues, but no reason why it should stand good for the issues of individuals or of corporate bodies. The holders of our paper currency have all the indemnity against loss the Government can give. Equal indemnity ought to be given to the holders of our coins.

There is nothing to be lost by exchanging trade-dollars for the standard dollar of 1837, which the act of February 28, 1878, authorizes to be coined. The trade-dollar contains the most silver. Exact computation shows that fifty-five trade-dollars will make fifty-six standard dollars. The difference in the weight of the two coins is 7½ grains. In this excess is value sufficient to meet the entire expense of melting the one to coin the other.

It is estimated, correctly it is believed, that the recoinage would make a profit to the Government of three-fourths of 1 per cent. on each dollar recoined, or $7,500 on each one million pieces. Existing laws require the Director of the Mint to purchase monthly $2,000,000 of silver bullion for coinage into standard silver dollars. Trade-dollars are bullion and have been since Congress in 1876 said they were not legal-tenders. Let them, then, be purchased at par, monthly, instead of other bullion, and in this way, if in no other, they will soon reach the melting-pots.

Mr. Speaker, it has been said that the Government is under no obligation, legal or moral, to redeem the trade-dollar, because that coin, it is alleged, was not made for use at home but for export and use abroad. Our trade with China and other remote countries it is claimed made a demand for a silver-dollar piece different from any previously coined, and that to promote this trade the law authorizing the coinage of trade-dollars was enacted.

It is possible that in voting for the trade-dollar law a few had these considerations in their minds. It is possible, also, if not probable, that others in voting for the law had in their minds a silver-dollar piece for circulation and use among the people of our own country. The trade-dollar law, it will be noticed, is perfectly free from hint or intimation as to the purpose of Congress in enacting it. Nor is this purpose suggested by the words and figures which are inscribed upon the face of trade-dollars.

The law simply enacts that the trade-dollar shall be a silver coin of the United States, that its weight and fineness shall be inscribed upon its face, and that in sums not exceeding $5 it shall be a legal tender in payment of debts. Surely there is nothing in this to authorize the statement that trade-dollars were to be coined for the use of people living in countries far distant from our own. Indeed both the letter and the spirit of the law plainly show the legislative intent to be the making of a coin for the use of our own people.

When it is remembered that the trade-dollar law put an end to the further coinage of the dollar of 1837, and that but few comparatively of these dollars were then outstanding, and that for five years thereafter trade-dollars were the only silver-dollar pieces authorized to be coined at our mints, it will be seen that the assertion that our people were to have none, but that other people were to have all, of the trade-dollar

coinage, has no foundation in fact. He who asserts that trade-dollars were not coined for general circulation among our own people certainly forgets that part of the trade-dollar law which makes them a legal tender in sums not exceeding $5 for the payment of debts.

If trade-dollars were coined for circulation in foreign countries this legal-tender provision was of no sort of account. If coined for circulation in our own country the provision was indispensable in making them acceptable to our people. But if it be true that trade-dollars were coined for the sole purpose of circulation and use abroad, are not the obligations of the Government respecting them the same as if the coinage had been made for the exclusive use of our own people?

Trade-dollars are United States money wherever they are held. The obligation of the Government to the holders of this money is the same whether they live in Asia or America. The people in foreign countries and the people in this country took these pieces of silver trusting that the Government, that said they were dollars, would keep good its words. In compelling our people to receive them at their par value the Government put itself under an obligation, binding in morals and in law, to maintain this value and make good any loss from depreciation. This obligation in honor can not be ignored.

Perhaps the strongest opposition to redeeming trade-dollars comes from those who assert that the Government has no property in them and had none in the silver from which they were made. Neither of these assertions is founded in law or in fact. Trade-dollars in large numbers were made from silver bullion owned by the Government and in stock at the mint when the trade-dollar law was passed. Surely no one will claim that the property of the Government in this coinage is not absolute and exclusive. Large amounts of silver bullion were purchased by the Government after the passage of the law, and from it many trade-dollars were coined. That the Government had exclusive property in this coinage admits of no dispute.

The balance of the trade-dollar coinage was made from bullion owned by individuals and corporate bodies, and by them brought to the mint to be coined into trade-dollars at their own expense.

In this bullion, and also in the coinage it made, it is said that the Government has neither property nor interest, and is therefore perfectly free from any and all obligation to redeem the trade-dollar coinage. The coinage law, we are told, authorizes this view of the subject.

The part relied upon enacts "that the owner of silver bullion may deposit the same at any mint to be formed into bars, or into dollars of the weight of 420 grains troy, designated as trade-dollars." Another part of the same law is "that the owner of gold bullion may deposit the same at any mint, to be formed into coin or bars for his benefit." If the tenor or effect of these two laws is unlike it is in a single particular. The gold bullion, it will be noticed, is to be formed into coin or bars for the benefit of its owner. For whose benefit the silver bullion may be coined into trade-dollars the law does not inform us.

There is therefore far greater reason for asserting that the Goverment is obligated to maintain the par value of the trade-dollar coinage than the gold coinage from bullion deposited to be formed into coin "for the benefit of its owner." If it has been claimed at any time or place that the Government is under no obligation to maintain this gold coinage at par, the fact has escaped general attention. In the particular under discussion this gold coinage and the trade-dollar coinage stand upon the same footing. The obligations of the Government respecting the one are the same respecting the other.

Whether silver bullion after its deposit at the mint for trade-dollar coinage becomes the property of the Government, or remains the property of the depositor, is a question which the coinage law does not determine. Considerations outside of this law must necessarily settle this question. If bullion deposits were kept separate and apart so that the identity of each were preserved, and the depositor received the coinage from his own bullion, then, probably, in strict law, both bullion and coinage were the depositor's property.

On the other hand, if the deposits were mixed and mixed also with the bullion owned by the Government and all were kept together as common stock from which all silver used at the mint was taken, then, upon principles recognized in every American court, both the bullion and its coinage were Government property. From the mint we have the information that all silver bullion, after it is assayed, is put together and so kept as common stock. From this stock all silver is taken as needed for coinage or other use.

Upon the deposit of buillion to be coined into trade-dollars its value was ascertained, and this was paid to the depositor in trade-dollars. Those trade-dollars were coined from the general stock, and were kept on hand in large numbers for exchange for deposited bullion.

In the light of these facts it will not do to assert that the Government has no property in the trade-dollar coinage. The assertion is not sustained by the facts or the law. From this course of dealing it may be well said that the Government upon paying the depositor the value of his bullion in trade-dollars was the absolute owner of the deposit.

In discussing the duty of the Government respecting the trade-dollar coinage the claims of those who hold trade-dollars made from their own bullion are not to be considered. Against such claims, if any there be, the objection that the Government has no property in what they hold might have force. But the objection has no strength against those who hold trade-dollars by a different title. Those who hold trade-dollars received in the usual and regular course of business and trade have indefeasible claims upon the Government. To them the Government stands as the maker of their money. They hold it for value.

Coined at the mint from Government silver and with Government labor, in the name of the Government and by its authority and by the Government put into circulation, why is not the Government bound to them for its face value? Look upon the two sides of these coins. Both are covered with inscriptions. What do they mean? Without them, these pieces are bullion; with them, they are United States coins. These inscriptions inspire confidence and trust. They imply, if they do not express, a guarantee as to value upon which the people might rightfully rely. No stronger pledge of honor and faith is it possible for the Government to give. In law, in equity, in sound morals, in good conscience the authoritative sayings and doings of the Government respecting trade-dollars estop it from denying its obligation to maintain their par value.

Nearly one-half of the trade-dollar coinage was made a legal tender in payment of debts. This part, amounting to $15,631,000, the Government compelled the people to accept at its par value. Is there no obligation upon the part of the Government to take it back at the same value? To say "no" is repudiation outright. When the bill to redeem the trade-dollar was under discussion in the Senate (February 5, 1885) it was stated that trade-dollars were made legal-tenders inadvertently. Somebody blundered, said the distinguished chairman of the Senate Finance Commitee, in making trade-dollars a legal tender. To whom did the honorable Senator from Vermont [Mr. MORRILL] refer? Was it to the Republican House or the Republican Senate by whose vote trade-dollars were made legal-tenders? Did he refer to the Republican President who gave his approval to the legal-tender provision of the trade-dollar law?

Let this grave charge of inattention to public duty be answered by the party then in power. Legislation respecting the trade-dollar is open to a graver charge than that of blundering. The joint resolution of July 22, 1876, is more than a blunder.

The resolution reads, that after July 22, 1876, trade-dollars should cease to be legal-tenders, and after that date all trade-dollars coined should be sent out of the country. On the day this resolution passed the Congress of the United States and was approved by the President there were 15,631,000 legal-tender trade-dollars in circulation among the people. The truth of this statement has been questioned.

The official reports show that 15,631,000 had been coined at the mints. Possibly the whole of this coinage had not reached the hands of the people. These trade-dollars were held largely by the laboring and industrial classes of our people. They were in the pockets of almost every wageman and wage-woman. Farmers held them. Tradesmen, large and small, had them in their tills. The savings of the poor were in these coins, and they formed a part of the holdings of those classed as not rich and not poor. All had been honestly acquired and all were honestly held.

The law, then three years in force, said they were good and lawful money of the United States, and upon the faith of this law a million or more of our countrymen were the lawful owners of this trade-dollar coinage. Duty, obligation, faith, honor, all stood in the way of the Government impairing the value of these holdings. Without notice, with no warning, suddenly, while in the midst of great financial troubles, precipitated by the panic of 1873, the Congress legislated all money value out of these trade-dollars.

By this quick transition from coin to bullion our people had $15,631,000 less money and $12,304,800 more merchandise. Three million three hundred and twenty-six thousand and two hundred dollars of value wiped out by a single resolve of Congress may appear in this age as a mere blunder in legislation. Let us hope that those who are to come after us will not regard such work as rank repudiation. We are a debt-paying people. Anything savoring of repudiation is universally abhorred. All legislation, State or Federal, impairing in the slightest degree obligations, public or private, or rights which are vested, is repugnant to honor, to good faith, and to the organic law of the Government.

The faith of the Government once pledged ought to be maintained inviolate. If these 15,631,000 United States coins were not satisfactory money the Congress ought to have retired them at par. This could have been done without the loss of a penny either to the Government or to the holders of this coinage. The holders of this legal-tender money had rights which were entitled to some respect at the hands of the law-making power of the Government. In any legislation which made depreciation possible the honor of the Government was directly involved. But neither of these considerations seem to have had weight.

The fact, if it be such, that the greater part of these legal-tender trade-dollars were in foreign countries doing service as money does not relieve our legislation from the taint of repudiation. Whether they were coined for use in or out of this country, or whether few or many were held at home or abroad, their value was seriously impaired by the resolution of Congress. If to-day Congress would enact that from and after January next greenbacks or any of our gold coins should cease to be a legal tender the act would be regarded the world over as a breach

of honor and faith. That part of the trade-dollar coinage ($15,631,000) put out as legal-tender money, in the judgment of many of our people is still legal-tender money and will be as long as it is outstanding.

The power of Congress to make these coins legal-tenders no one disputes. The power of Congress to make them non-legal-tenders in the hands of their holders is seriously questioned. But whether or not Congress in taking from trade-dollars their legal-tender property transcended the limits of its constitutional powers need not now be discussed. Nor is it necessary at this time to do more than refer to what is so generally claimed, that the Constitution itself makes all silver and gold coin legal-tender money, and that any act of Congress otherwise providing is void.

Upon the passage of the resolution declaring trade-dollars non-legal-tenders the further coinage of these silver pieces ought, instantly, to have ceased. But the resolution otherwise provided. It authorized the coinage of these same silver pieces to be continued, without limit in amount, under the direction of the Secretary of the Treasury, upon the condition that all that was coined should be sent out of the country. Upon the authority of this resolution, and within two years after its passage, 20,540,910 trade-dollars were made at our mints.

All of this coinage, it is said, was sent out of the country. How much of it has returned is, in this connection, a matter of no particular moment. It may be well enough, however, to state that of the entire trade-dollar coinage ($35,959,360) it is estimated that the amount held in this country is from $7,000,000 to $10,000,000. Among people uninformed in our laws these silver pieces are treated as United States coins. Their appearance well justifies this belief. In form and in the inscriptions upon their face they are nearly identical with other United States coins. In other countries they were received in the belief that they were our money and in this country had money value. These people are deceived. The Government made the deceit possible, and for this reason, if for none other, it is obligated to make the trade-dollars they hold worth their face value.

We are told that the trade-dollar coinage held in this country is now in the hands of persons who bought them at less than their par value. This is urged as a reason why we ought not to retire this coinage. While I do not doubt that if we pass a law calling in all outstanding trade-dollars at par we will put money into the pockets of those who have speculated in these coins, and also make further speculation in them possible, still I am satisfied that many of these coins are in the hands of the same people who held them when they fell below par.

In my judgment it is the duty of the Government to redeem all trade-dollars outstanding.

The fact that a few who are thought to be undeserving will be profited if this is done, ought not to prevent us from doing to others what we know to be just and right.

Until trade-dollars are called in and changed from coin to bullion, or put to some other use, they will continue to speak loudly and truly of faith broken and duty not done. All outstanding trade-dollars ought to be retired at par, and that, too, within the shortest possible time.

If we would maintain our financial honor they should be withdrawn at once, and all losses made good. The public interests would be best subserved by relieving the people, and that speedily, of this depreciated money. All of it ought to be got out of the way. There should be but one silver-dollar piece. Now we have two. The intrinsic value of the one is greater than the other. The one is current, and the other is uncurrent. One is worth $1, the other is worth 80 cents.

Payment of the Surplus on the Public Debt.

SPEECH
OF
HON. JOSEPH G. CANNON,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 14, 1886.

On the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. CANNON said:

Mr. SPEAKER: The labor of the first session of the Forty-ninth Congress is now substantially completed. Before we adjourn I desire to submit a statement covering the provisions made by appropriations for the support of the Government for the fiscal year commencing on the 1st day of July, 1886, and ending on the 30th of June, 1887, and compare the same with the estimates submitted under direction of the President by the Secretary of the Treasury to Congress for such service, as well as an estimate of the revenues made by the Government to meet the expenditures. Also, in addition a comparison of the appropriations for the fiscal year 1887, with the expenditures for the fiscal years 1884, 1885, and 1886, respectively. I hold in my hand a letter from the Secretary of the Treasury, transmitting tabular statements A and B, covering these matters.

I send the letter to the Clerk's desk to be read.

The Clerk read as follows:

TREASURY DEPARTMENT, *August* 5, 1886.

SIR: In reply to your application of the 4th instant I hand you tabular statement A, comparing the expenditures of the Government for the fiscal year ending June 30, 1886, with those for the year ending June 30, 1885, noting the items of increase and decrease, respectively.

Also tabular statement B, showing amount of estimates submitted to Congress by the Secretary of the Treasury for fiscal year ending June 30, 1887, and the appropriations made by the regular annual and miscellaneous appropriation bills for that year. The permanent indefinite appropriations will no doubt exceed the estimates ($118,000,000) owing to the claims arising under a decision of the United States circuit court for the district of New York, for refund of duties on cartons, covering at least $5,000,000.

Table B also covers summary of the expenditures (total) for the fiscal years ending, respectively, June 30, 1884, 1885, and 1886.

In further reply I have to say the expenditures for the sinking fund are less for 1885 and 1886, and will be still less for 1887, owing to the fact that in determining the amount to be applied to the fund for those years the aggregate of the various coin and currency certificates held in the Treasurer's cash, as well as the cash available for the reduction of the debt and the amount held as a reserve for the redemption of United States notes under the resumption act, were deducted from the outstanding principal of the debt, whereas in former years the amount was determined without such deductions being made.

Respectfully yours,

C. S. FAIRCHILD, *Acting Secretary.*

Hon. J. G. CANNON,
House of Representatives.

I will insert table B, as follows:

TABLE B.

Title of bill.	Estimates, 1887.	Appropriations, 1887.
Pension	$75,830,200 00	$76,075,200 00
Military Academy	412,075 70	297,805 00
Fortifications	3,396,000 00	
Consular and diplomatic	1,604,961 60	1,364,065 00
Navy	30,836,357 74	*16,489,556 72
Post-Office	54,986,166 89	54,365,863 25
Indian	6,051,259 84	5,561,262 84
Army	25,356,998 01	23,753,057 21
Legislative	21,523,565 62	20,654,346 37
Agricultural	651,875 00	654,715 00
Sundry civil	33,554,600 59	22,657,510 58
District of Columbia	3,839,868 99	3,721,603 99
River and harbor	10,176,920 00	14,473,900 00
Miscellaneous	3,556,519 45	†10,769,015 28
Deficiencies	15,895,122 81	13,967,372 87
Total regular annual appropriations	287,672,492 24	264,804,721 11
Permanent annual appropriations	118,910,955 00	118,910,955 00
Total regular and permanent annual appropriations	406,583,447 24	383,715,676 11
Expenditures for 1886, including $44,551,043.36 for sinking fund, and $42,830,438.18 for the postal service from the postal revenues		329,864,620 04
Appropriations for 1887 in excess of the expenditures for 1886		53,851,056 07
Expenditures for 1885, including $45,604,035.43 for sinking fund, and $45,504,624.63 for the postal service from the postal revenues		351,335,595 17
Expenditures in 1885 in excess of expenditures for 1886		21,470,975 13
Expenditures for 1884, including $46,790,229.50 for sinking fund, and $47,083,869.48 for the postal service from the postal revenues		338,000,343 31
Expenditures for 1884 less than expenditures for 1885		13,335,251 86

* Including $3,500,000 for increase of the Navy.
† Including $5,769,015.28 for judgment court of Alabama claims and expenses of court and laws approved and printed up to July 31, and bills which have passed both Houses.

The Secretary of the Treasury in his annual report to Congress estimated the revenues for 1887 at $315,000,000; the Postmaster-General estimated the postal revenues for 1887 at $47,542,252.64; total, $362,542,252.64.

So it appears that the new administration in the first year of its power asks appropriations for the service of the Government to the amount of over $406,500,000 for 1887; which is, in round numbers, over $44,000,000 in excess of the estimated revenues for the same year; in round numbers, $75,000,000 more than the total expenditures for the fiscal year 1886.

It further appears that the appropriations for the year 1887 are, in round numbers, $54,000,000 more than the expenditures for 1886, and the Secretary of the Treasury tells us in his letter just read that they will not cover the expenditures for 1887 by at least $5,000,000 for refund of duties payable from the permanent appropriations.

Mr. Speaker, it is true that the revenues for the fiscal year 1886 amounted to $380,000,000, in round numbers, including postal revenues—a larger amount than was estimated by the Secretary of the Treasury in his annual report to Congress for the year 1887, but even if the revenues for 1887 should be as great as they were in 1886, still they will not be sufficient to pay these extraordinary appropriations.

The expenditures for 1886 were made under appropriations granted by the second session of the Forty-eighth Congress while Chester A.

Arthur was President. I ask this Democratic House and the country, if in the first grant of appropriations made under this Democratic administration, with the elections next fall staring you in the face, you give, in round numbers, $54,000,000, for 1887, more than was expended in 1886, what will the appropriations and expenditures be next year in event the people give you a further lease of power and you can feel that you are firmly seated in the saddle?

Mr. Speaker, when the country comes to realize the extraordinary record of this administration it will be justly alarmed.

Especially will this be the case when the country realizes that this enormous increase of expenditures has been provided for while the President and his admirers have been claiming the attention of the country by his one hundred and two vetoes of private pension bills, which if they gave $20 per month to each claimant would only save $24,480 per annum to the Treasury.

No wonder, Mr. Speaker, that on Tuesday last, when the conference report on the sundry civil appropriation bill was being considered, the watch-dog of the Treasury, Mr. HOLMAN—who, by the by, has not been quite as vigilant as usual this session—in anguish and with indignation exclaimed, "I greatly regret the unexampled increase of offices in this bill; but at this late hour I will not, on that account, retard the adoption of the report."

Sir, the Democratic party came into power on the distinct allegation that the whole public service was honeycombed with extravagance, and with the distinct pledge that they would reduce expenditures. The truth is that there was not the extravagance they claimed; but instead of correcting abuses that did exist they have left them untouched—not only left them untouched, but have multiplied them.

Mr. Speaker, my colleague [Mr. SPRINGER] claimed great credit for this administration a few days ago, stating that it had largely decreased the expenditures for 1886 over 1885. He did not stop to say that the appropriations for 1886 were made under a Republican administration. But that the expenditures for 1886 as compared with 1885 may be seen as they are, I insert Table A, transmitted by the Secretary of the Treasury, and referred to in his letter which I had read at the Clerk's desk, as follows:

TABLE A.—*Comparison of expenditures of the Government, fiscal years* 1885 *and* 1886.

	1885.	1886.	Increase 1886.	Decrease 1886.	Items of increase and decrease.	
Customs service	$27,125,972 67	$24,165,246 36		$2,960,726 31	Decrease in—	
					Repayment to importers	$1,412,000
					Collecting the revenue and detection of frauds	124,000
					Debentures or drawbacks	486,000
					Furniture and repair of same, public buildings	87,000
					Fuel, light, and water for public buildings	27,000
					Light-house establishment	223,000
					Custom-house and other buildings	645,000
					Total	3,004,000
					Increase in—	
					Miscellaneous items	44,000
					Net decrease	2,960,000
Internal-revenue service	4,550,623 21	4,113,319 90		437,303 31	Decrease in—	
					Salaries and expenses, agents, collectors, &c	259,000
					Redemption of stamps	125,000
					Miscellaneous items	105,000
					Total	499,000
					Increase in—	
					Stamps and paper	62,000
					Net decrease	437,000
Diplomatic and consular service	5,439,609 11	1,332,320 88		4,107,288 23	Decrease in—	
					Payment judgments, Alabama claims	3,301,000
					Awards of French and American Claims Commission	704,000
					Miscellaneous items	102,000
					Total decrease	4,107,000
Quarterly salaries	598,986 61	616,379 42	$17,392 81			
Treasury Department	26,854,109 05	23,323,749 66		3,530,359 39	Decrease in—	
					Salaries	135,000
					Mints and assay offices	197,000
					Bureau of Engraving and Printing	257,000
					Sinking funds, Pacific railroads	4,397,000
					Mail transportation, Pacific railroads	947,000
					New Orleans, Cincinnati, and Louisville expositions	1,000,000
					Building for State, War, and Navy Departments	139,000
					Increasing water supply of Washington, D. C	485,000
					Payment of judgments, Court of Claims	468,000
					Miscellaneous items	615,000
					Total	8,640,000
					Increase in—	
					Court-houses, post-offices, and other buildings	1,058,000
					Louisville and Portland Canal	400,000
					Deficiencies in postal revenues	3,652,000
					Total	5,110,000
					Net decrease	3,530,000
Judiciary	3,945,691 37	3,309,689 19		636,002 18	Decrease in—	
					Fees of supervisors of elections	255,000
					Expenses of United States courts and miscellaneous	381,000
					Total decrease	636,000
Interior, civil	$8,979,206 36	$7,306,224 44		$1,673,041 92	Decrease in—	
					Salaries and miscellaneous expenses	$58,000
					Building and grounds under Interior Department	220,000
					Public-lands service	70,000
					Surveying public lands, &c	254,000
					Deposits by individuals for surveying public lands	681,000
					Miscellaneous items	290,000
					Total decrease	1,673,000

TABLE A.—*Comparison of expenditures of the Government, &c.*—Continued.

	1885.	1886.	Increase 1886.	Decrease 1886.	Items of increase and decrease.	
War	42,670,578 47	34,324,152 74		8,346,425 73	Decrease in—	
					Rivers and harbors	6,868,000
					National Home for Disabled Volunteer Soldiers	117,000
					Soldiers' Home	100,000
					Reimbursing certain States (Kansas) expenses suppressing Indian hostilities, &c	332,000
					Refunding to States expenses in raising volunteers	255,000
					Horses and other property lost in the military service	224,000
					Army transportation, Pacific railroads	300,000
					Miscellaneous items	150,000
					Total decrease	8,346,000
Navy	16,021,079 67	13,907,887 74		2,113,191 93	Decrease in—	
					Double-turreted monitors	290,000
					Steel cruisers, construction	441,000
					Steel cruisers, ordnance	217,000
					Pay, miscellaneous and contingent	100,000
					Mileage, Navy (Graham decision)	208,000
					Steam machinery	90,000
					Construction and repair	30,000
					Provisions	20,000
					Bounty for destruction of enemies' vessels	85,000
					Extra pay to officers and men in Mexican war	63,000
					Lady Franklin Bay expedition	65,000
					General account of advances	1,393,000
					Total decrease	3,002,000
					Increase in—	
					Pay of Navy and Marine Corps	630,000
					Miscellaneous	259,000
						889,000
					Net decrease	2,113,000
Indian service	6,552,494 63	6,099,158 17		453,336 46	Decrease in—	
					Fulfilling treaties and treaty supports	4,000
					Miscellaneous supports	230,000
					Trust funds	9,000
					Miscellaneous expenses of Indian service	210,000
					Total decrease	453,000
Pensions	56,102,267 49	63,404,864 03	$7,302,596 54			
Interest on public debt	51,386,256 47	50,580,145 97		806,110 50		
Totals	260,226,235 11	242,483,138 50	7,319,989 35	25,063,785 96		
Decrease in 1886 in ordinary expenditures		17,743,796 61		17,743,796 61		
Postal service, from the postal revenues	45,504,624 63	42,830,438 18		2,674,186 45		
Sinking fund	45,604,035 43	44,551,043 36		1,052,992 07		
	351,335,595 17	329,864,620 04	7,319,989 35	28,790,964 48		
Total decrease in 1886		21,470,975 13		21,470,975 13		

It will be noticed from the table that the total decrease of expenditures for 1886 over 1885 is, in round numbers, $21,000,000. Now, this decrease comes from a few items, some of which fluctuate from year to year and some of which were exceptional for 1885, and do not in the slightest degree show extravagance in 1885 or economy in 1886. I give a summary of them from Table A:

Repayment to importers (fixed by law), and varies from year to year	$1,412,000
Debentures and drawbacks fixed by law	486,000
Payments, judgments Alabama claims, the money for which was recovered from Great Britain, and has been in the Treasury for many years	3,301,000
Awards, French and American Claims Commission	594,000
Sinking fund Pacific railroads, required by law under Thurman act to be invested in Government bonds, not invested on account of high price of bonds	4,397,000
New Orleans and Louisville expositions	1,000,000
Increasing water supply of Washington, D. C.; loan by the Government	485,000
Judgments of the Court of Claims	468,000
Rivers and harbors, soldiers' homes, and other war expenditures	8,343,000
Decrease in expenditures for sinking fund, arises from different mode of computing same (see Secretary Treasury's letter)	1,052,000
Total	21,533,000

Thus it will be seen that when you analyze the zealous speech of my colleague from Illinois, Mr. SPRINGER, it is but as the "sounding brass and tinkling cymbal."

I was struck with wonder while he was talking, that with his fertile genius he did not address himself to the extraordinary increase in appropriations of $54,000,000 for 1887 over the expenditures for 1886, at which he points with so much pride. I beg the pardon of the House for detaining it with the details of a very dry subject, and yield the floor.

Payment of Treasury Surplus on the Public Debt.

SPEECH

OF

HON. WILLIAM D. BYNUM,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886,

On the report of the conference committee on the disagreeing votes of the two Houses on the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. BYNUM said:

Mr. SPEAKER: It is not my intention to enter into any lengthy discussion of the main question involved in the scope of the resolution as passed by the House, requiring the Secretary to pay out the surplus in the Treasury upon the interest-bearing debt, subject to call.

I heartily supported the resolution as it passed this House, and thought then and now think that its provisions were not only wise and just but, under the circumstances, eminently proper.

No issue was more distinctly made in the campaign of 1884, in the State which I have the honor, in part, to represent, than that the surplus in the Treasury should be applied, without delay, to the payment of so much of the national debt as might be due. That the Government should demand and collect from the people, by taxation, millions

of dollars annually and hoard the same up in the vaults of the Treasury instead of applying it to the payment of the interest-bearing debt, was considered not only bad financiering but a grievous offense against the general welfare. It was believed that such a policy resulted not only in an unwarranted increase of the burdens of the people, by the accumulation of interest upon the bonds which should be redeemed, but that the volume of money, already too small in the West, was contracted and debts already too large thereby increased.

When the present administration assumed control and management of our national finance the surplus in the Treasury, by the revised and corrected statement, amounted to less than $24,000,000. On the first day of the present month it had swollen to over $80,000,000. During the time this immense sum has been accumulating there has been outstanding, payable at the option of the Government, over $140,000,000 of bonds drawing interest at the rate of 3 per cent. Industries, already paralyzed, and labor, already oppressed, have been compelled to give up a share of their meager earnings, which instead of being applied to the extinguishment of their obligations and a reduction of their burdens, have been secreted in the dark vaults of the Treasury and there remained idle, while the debts which should have been promptly paid have been vigilant in their growth. This system of financiering was the result of an implied discretion claimed and exercised by the Secretary of the Treasury.

This House, for the purpose of taking away any discretionary power that the Secretary might have in the matter and compelling him to apply the surplus now on hand or which might hereafter accumulate to the payment of bonds now due, at the rate of not less than ten millions a month, so long as that amount should be in the Treasury, passed the resolution which was sent to the Senate.

When it was returned to this House I am confident a more complete transformation of a legislative provision was never beheld. Twenty millions of the surplus had been taken away and placed under the caption of a working reserve, and that discretion, heretofore claimed and exercised by the Secretary, and which the House had sought to extinguish, was not only rehabilitated, but absolutely clothed with Congressional sanction and legal existence.

What have the conferees of the House presented to us as a compromise? They have not only wholly surrendered the position taken by the House and retraced their steps to the point from whence we started, but have traveled in the opposite direction and met the Senate conferees more than half-way. They ask that we agree to the establishment of the twenty millions as a working reserve, which can only increase the volume already idle, and that the Secretary, by direction of the President, shall cease to pay out the surplus whenever in the opinion of the President there is a great emergency and the protection of the public credit requires it.

Mr. Speaker, for years I have tried to comprehend this mode of preserving and strengthening the public credit, and I confess I have not been able to do so. I have often thought that if individuals could preserve and strengthen their credit by hoarding up their money and suffering their interest-bearing obligations to remain outstanding what a revolution would take place in the commercial world; what immense, colossal financial standings many who are now at the bottom would soon be able to build up, and how low many who are now at the very top would soon sink. To my mind the Government, as individuals, can only strengthen her credit by paying off her interest-bearing obligations and reducing her debt.

The credit of this Government is not based wholly but only in a very slight degree upon the amount of money held in the Treasury. It has a foundation more substantial than if she possessed all the gold coin in the world. The great resources of our country are a continued pledge for the faithful performance of every contract and the payment of every obligation. To hinge the credit of this nation upon a few millions of money in the Treasury and the power of the President to issue a proclamation, is a confession which will and should be repudiated and scorned by the people we represent.

I am in favor of requiring the Secretary to pay out the surplus without qualification or limitation, and am willing to answer to my constituents for any and all the evil consequences that may follow such a policy.

I have the greatest confidence in our friends in the East to create an emergency—in fact, there is no emergency in the manipulation of finances for their benefit and our detriment so great but what they have always been equal to it. When there has been a stringency of money in New York they have been able to secure the payment of the surplus in the Treasury upon obligations held by them. When there has been a plethora of money in that great center they have been all-powerful in keeping the doors of the vaults closed and the money which was there secreted, and which was so much needed in other parts of the country, idle.

The attention of the country has been called to this question, and the people will no longer quietly submit to such a policy. Public sentiment will compel the present officials to pursue a policy different from that which has controlled them in the past.

My objection to the report of the conferees is that it confers greater power upon the Secretary of the Treasury than he now rightfully possesses, and will enable him to cease payment at the will and whim of the money-sharks, who will be the authors of an emergency whenever they desire to speculate upon the legitimate business of the country. The gentleman from Kentucky [Mr. BRECKINRIDGE] says that the resolution as amended is a step in the right direction. I can not agree with him; in my judgment it is a step in the wrong direction, and I am unwilling to take it.

Interstate Commerce.

SPEECH

OF

HON. JONATHAN H. ROWELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886.

The House having under consideration the bill (S. 1532) to to regulate commerce—

Mr. ROWELL said:

Mr. SPEAKER: I regret exceedingly that the Senate and the Commerce Committee of the House are so wide apart in their views of what is necessary and proper legislation in regard to interstate commerce. I regret it the more, because in my judgment it is the handwriting on the wall which notifies us that the Forty-ninth Congress is to adjourn without a compliance with the reasonable demands of the people that some effective legislation upon this subject shall be placed upon our statute-books.

The power of Congress to regulate interstate commerce is conceded on all sides. That the carrying of freight and passengers by rail falls withing the meaning of the word "commerce" has been judicially determined beyond any possible question is also conceded. The need of regulative national legislation is now so universally admitted that there is left for Congress, so far as discussion goes, only the duty of finding out the best method of correcting the evils resulting from unregulated railway commerce.

Two propositions are before us—the Senate bill and the Reagan House bill. They are alike in the definition of interstate commerce, alike in declaring against extortion, unjust discrimination, rebates, and drawbacks, for in this respect they but reiterate the rules of the common law. In all other respects they are unlike. In proposed remedies—and this is what Congress ought to concern itself about—they are as wide apart as the poles. For eleven years, as often as Congress has assembled, this bill, known as the "Reagan bill," not in exact terms but in substance, has made its appearance in the House.

It had its inception in the very infancy of the experimental railroad legislation of this country. Fifteen years ago witnessed the beginning of the attempt to regulate railway traffic in the United States. In that period of fifteen years the majority of all the States and Territories in the Union have tried their hands through State and Territorial legislation at the business of regulating railway traffic within the States. Four-fifths of that majority have pronounced judgment against the theory upon which the Reagan bill is constructed, originated within four years of the commencement of the period of experiments, and at a time when theories were plenty while practical knowledge upon this subject was very meager. We were feeling our way then in the States, flagging a road through the wilderness of untried theories.

Mr. REAGAN. If my friend will allow me, I will say to him there never has been a State bill nor a Federal bill based upon the theories of the bill that the House is now considering.

Mr. ROWELL. I was just going to state, Mr. Speaker, that notwithstanding the fact that a majority of the States of the Union have attempted to regulate railway traffic within the States, notwithstanding the fact that within the borders of those States the attention of the people has been constantly directed to this question, and their legislators have been the exponents of the best and most enlightened thought upon this subject, we are, and have been for eleven years, treated here to a bill which ignores the wisdom and experience of the States, a bill without a precedent, not based upon knowledge, a "floater" in the great sea of legislation, and we are told by the gentleman from Virginia [Mr. O'FERRALL] that this bill is to be adhered to through thick and thin in order to accomplish three purposes.

The first is to add luster to the fame of the gentleman from Texas [Mr. REAGAN]. Now, I object to that purpose because the gentleman does not need anything of the kind to add luster to his fame. That is not our concern.

The second purpose, frankly announced, I must confess, is to give the Democratic party the credit of having initiated a measure of this character; and the third declared purpose is to throw the responsibility of failure to secure legislation upon the Republican Senate. We do not

often get such refreshing frankness connected with such poor reasons. It amounts to this: For Democratic campaign purposes we are to pass a House rather than a Senate bill; we are to pass a bill which the Senate has rejected in former Congresses and which we know can not become law, and the people are to be deceived with this pretense. Weeks ago the Senate passed an interstate-commerce bill and sent it to the House.

That bill is not speculative in its character. It was framed after a most elaborate, thorough, and exhaustive investigation of the whole subject—a bill arrived at by taking the testimony of the various railroad commissioners of the States, taking testimony from railway experts, from shippers, from farmers, from all classes of people who have studied this great question, and by combining the knowledge and experience gathered in Europe since 1832 and in this country since 1870 in railway regulation by law. The result of all that investigation, knowledge, and study is presented here in a bill which needs only the approval of this House and the President to become a law; and we are nevertheless told that for the purpose of shedding additional luster upon the gentleman from Texas and giving the credit to the Democratic House of passing a bill upon this subject, which the Senate will not accept, we are to throw away all of that knowledge and all of that experience so laboriously gathered during the last fifteen years.

It looks to me as though somebody had died a dozen years ago and left us a legacy of doubtful value, and we are to be required to ignore all our knowledge of the practical workings of regulative law upon the railway system of the country in order that the legacy may be preserved for us and some use be made of it.

Now, what we want here is practical legislation rather than eloquent declamation. We can not afford to play at law-making in the interest of personal fame and partisan advantage. I think I know something about this question.

It was my fortune, Mr. Speaker, to be connected as an attorney representing the State of Illinois with the first lawsuit, I believe, ever tried in the United States to test the question of State control over the railway companies. Our State was the pioneer in the attempt to enforce the doctrine that notwithstanding the charters granted by the State, there was a reserved right inherent in the Legislature to control these public corporations—to alter and amend their charters, and to compel obedience to such reasonable laws as should be enacted in the interest of the general public. All our railway companies had been chartered by special acts of the Legislature without any reservation of the right to amend or repeal, and it was strenuously insisted that these charters constituted a contract between the State and the company which could not be changed or impaired by subsequent legislation without the assent of both the parties to the contract. Under these supposed charter contracts the right to fix the amount of charges for carrying freight and passengers was claimed by the companies, subject only to the common-law rights and remedies as applied to common carriers.

The constitution of 1870 made it mandatory upon the Legislature to enact laws against extortion and unjust discrimination. In obedience to this mandate the first Legislature which assembled after the adoption of the constitution enacted such a law as our then experience suggested, providing for a railway and warehouse commission with extensive powers, among them the power and duty of seeing to the enforcement of the law. Out of that law and our experience under it has grown our present statute, and the Senate bill now before us is largely modeled upon it. Out of that law came the celebrated Granger cases in the United States Supreme Court, and the settlement forever of the right of the State to control the railway corporations, the settlement forever I hope of the doctrine that whoever invests his money in a railway enterprise does not invest it in the same way that a man does who invests in private business, but does put his money into a public business, subject to the interests of the public, dedicated to a public use, allowed to control his investment for personal profit, but subject at all times to such reasonable control as may be demanded for the public good.

It is because of the misunderstanding of that doctrine that investers in railway property have insisted that the operation and conduct of their business is their individual concern, good for the public when public and private interests require the same policy, but when they clash private interest being paramount.

If owners of railway property would only realize the true nature of the business under their control, we should hear less of robber legislation, of claims that freight charges should be as large as the nature of the freight will bear. Indeed we should have less need of any legislation upon the subject.

Now, I am earnestly in favor of such general legislation as will bring the railway system of the United States under the control of law. I want to reach such legislation, but so far as I am individually concerned I would about as soon have no law as the proposed measure of the House. It is a question of remedies, rather than a question of definitions.

In the Reagan bill we have a definition. It is a common-law definition, and does not differ materially from the Senate bill. We have also a definition of unjust discrimination which goes further than the common law, and which I shall have occasion to speak about further on. We also have a remedy. It is the same remedy we have had since courts were established and the common law was recognized as the right of Englishmen. It pertains only to the individual and to individual cases. A lawsuit under it settles nothing but the single case, nothing for the community. All the difficulties about evidence remain as now, and every lawyer knows that these are so great that it is next to useless to attempt to enforce a claim for unjust charges.

The Senate bill provides for a commission to see to the execution of the law.

The objection to the commission, as stated by the gentleman from Virginia—and it is the one urged by all supporters of the Reagan bill—is that you can not find five honest men for commissioners, that whoever compose the commission will be owned by the railroad companies, and that on that account the law will be executed or non-executed in the interests of the roads and against the people.

Does the gentleman forget that in every judicial district in every State of the Union there sits a man with power of life and death, who holds the property, the liberty, the all of the citizen in his hands? And has it ever been difficult to find a pure judiciary, either in England or America, whether appointed or elected? And shall it be said that we, the American Congress, may not create another judicial body which shall be as pure and above reproach in the administration of the powers granted to it as the courts which from time immemorial have presided over the destinies of English-speaking people? Such an objection, in the light of experience, hardly reaches the dignity of argument.

The absence of a provision for a commission with defined powers and duties is the marked feature of the Reagan bill, which may be characterized as the absence of all effective remedies.

There is a provision in the Reagan bill to which I desire attention for a few minutes, the provision which declares that in no instance shall there be a greater charge for a short haul than for a longer haul over the same road. It makes no difference whether the freight is going one way or another, whether it is eastbound or westbound, whether across the prairie or over the mountains. It takes no account of the different cost on different parts of the road. It ignores the question of return freight. It is oblivious of the fact that a large part of the cost of moving freight is made up of hauling dead freight in the weight of the cars.

Now, I call the attention of the gentleman from Texas to the fact that it has been judicially determined both in England and America that all discrimination is not necessarily unjust discrimination, and when he proposes as an unbending rule that there shall be no discrimination, he proposes to put upon the statute-books a requirement in some instances for an unjust discrimination.

Mr. REAGAN. My friend is mistaken.

Mr. ROWELL. I am not mistaken.

Mr. REAGAN. The declaration of the House bill is that there shall be no unjust discrimination. That is the language of the bill.

Mr. ROWELL. But the House bill says there shall be no greater charge in any event for a shorter than for a longer haul. That is your definition of unjust discrimination as applied to distance. In practical application it amounts to pro rata mileage rates.

At the January term 1873, the supreme court of Illinois had this exact question up for consideration in the case of The People *ex rel* Railroad and Warehouse Commissioners *vs.* The Chicago and Alton Railroad Company, the case which marked the beginning of litigation upon the question of State control of these corporations.

The Chicago and Alton Railroad Company charged more for hauling a car-load of lumber from Chicago to Lexington than from Chicago to Bloomington, the transportation being in the same direction over the same line, Bloomington being 20 miles farther than Lexington.

The constitution of Illinois directing the Legislature to enact laws against unjust discrimination, the Legislature enacted a statute like the Reagan bill forbidding a greater charge for a shorter than for a longer haul—with this difference, that it should be in the same direction and to or from the same terminal point.

The court decided that it was not necessarily unjust discrimination to charge more for the shorter than for the longer haul, in consequence of which our Legislature changed the statute to meet the requirements of the decision. This was based upon English decisions, and it was held that while ordinarily it would be unjust to charge more for a shorter than for a longer haul, yet in very many cases not to make such a charge would be unjust.

Mr. REAGAN. I will inquire of the gentleman whether the constitution of Illinois does not prohibit charging more for a shorter than for a longer distance?

Mr. ROWELL. The constitution of Illinois makes no such prohibition.

Mr. REAGAN. I was not certain on that point.

My. ROWELL. The constitution of Illinois makes it mandatory upon the Legislature to pass laws prohibiting unjust discrimination. The law I speak of prohibiting the charging of more for a shorter than for a longer haul was made, as was supposed, in obedience to that mandate in the constitution and in accord with it. But the Supreme Court

held that when the Legislature declared against all discrimination it enacted what the constitution did not require or permit.

It was a requirement to do what might be unjust, because discrimination may sometimes be just and a refusal to discriminate may be unjust.

All Legislatures that have enacted laws of longer and shorter hauls have confined their prohibition to hauls in the same direction to or from the same terminal point and not to hauls between intermediate points. This distinction is left out of your bill, but is in the Senate bill. Your bill, if enacted into law, destroys competition—that vital element which controls prices in almost all kinds of business. My idea is that the objective point of all legislation, so far as may be, ought to be toward competition. The objective point of your legislation is opposition to competition.

Your legislation is for narrow bounds permissible, possibly, on the short hauls within the boundaries of a single State. We all understand that in every section of the country are great receiving and distributing depots, cities into which the crops of the country and the manufactured goods of the country flow to be distributed outward, and that within the power of State legislation largely is the traffic entering into these depots of distribution. Take away the right to reduce freights to compete with other railroad and with water routes, and you destroy the power of all these great distributing agencies in collecting and sending to market the produce of the country. You bring a blight upon all that great western world at the other end of the long hauls; you benefit nobody; you do not cheapen rates; you bring upon yourselves the very difficulty you are trying to avoid.

In doing this thing you must necessarily destroy the advantage which comes from favorable location for the purpose of transferring it to less favored places, which amounts to nothing less than transferring one man's property to another without compensation. You take away the advantage of competing lines, which many communities have secured for themselves at great expense. You make it impossible for the longer line between two points to compete with the shorter line without sacrificing its local traffic.

Should the Reagan bill ever become law, and obedience be compelled, in my opinion it will result in freight charges regulated largely by non-competing points, and will bring misfortune upon the great West to such an extent that the demand for its repeal will be much greater than is the demand now for legislation.

But, Mr. Speaker, the Senate bill gives us a practical remedy. It proposes a commission's court without expense to the individual, with ample power to enforce its decisions, not in a single case but in all cases within the law.

To it is given the right in a summary way to have the remedy of mandamus and injunction, to compel obedience to the law in all cases. It has ample power to investigate and declare the truth and to charge the burden of proof to the other side. The main trouble with the common law rests in the evidence not in the right. The Cullom bill, unlike the Reagan bill, takes away that difficulty and provides efficient remedies.

Under the Reagan bill you may take your case into court with the burden upon you of producing the evidence to maintain your rights, and at the end of the case you have settled nothing but the right in one case. You must have a new case for every unjust charge, involving, it may be, but a few dollars. How many shippers do you think will be willing to take the risks of such expensive litigation, so uncertain in results and so sure to provoke hostility on the part of the railroads. Pigmies do not invite giants to combat.

Why then shall we not turn to the Cullom bill and use the strong arm of the Government in this contest, which must sooner or later be fought out with the great railroad power of the country?

It is no uncertain experiment. I undertake to say that in Illinois, after fifteen years of experience, the commission we have always had has proved to be as honest as our judiciary. I undertake to say there is no State in the Union which has come so near solving this question so far as State traffic is involved, and where from a condition of hostility in 1872 such real harmony has been secured between the roads and the people.

This has not been accomplished without trouble and litigation, for the railroad companies did not easily or willingly yield obedience to the law.

Every question involved has been litigated and settled through our commission. The law has triumphed and the roads have yielded obedience. What is wanted now is a law which shall regulate interstate commerce as we in Illinois now regulate it within the State; a law which, through a commission, shall have elasticity enough to meet the varying exigencies which constantly arise in this kind of traffic, which shall be strong enough to protect individuals and communities from the unjust exactions and discriminations now practiced by the roads, and which will at the same time secure the same reduction of freight charges through healthy competition; a law which will emancipate the people from the undue power of the great railroad corporations and secure for them the full measure of good which is our right. Here is a universal demand; we all want an interstate-commerce law.

But we are told we shall not have it unless we launch out upon the sea of experimental legislation; that we shall not have a tested law; that we shall not have that which has been proved to be successful and proper and legitimate; that we must go where no State has ventured, must take what no one outside of this House has approved; and all this that the Democratic party may be credited with something which it can call its own, while the people are left with the common-law remedies which they have had all along. Why not take the result of recent investigations as formulated in the Senate bill, and before this Congress adjourns let the people rejoice that we have given them a law upon this question, that we have not locked horns between a successful and practical proposition and a theory.

The Senate bill is not all that will be required, in my judgment, but it is a beginning. Eventually we shall go further. We shall break up pooling in all forms and shall get the full benefit of competition, not alone at competing points but at intermediate stations; and we shall do this in no spirit of hostility to railroads, and without taking from them any legitimate protection. We can not afford to destroy railroad prosperity if we could, because with all the attending evils which have come with this vast aggregation of wealth, this railway system has brought unnumbered blessings to our people, is capable of bringing more, is destined to be a bond of union between all our people, a promoter of good-will, a destroyer of sectionalism.

If we are but wise it will cease to be master and become our most valued servant.

Treasury Surplus.

SPEECH

OF

HON. JOHN LITTLE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 3, 1886,

On the conference report on the disagreeing votes of the two Houses on the amendments of the Senate to the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. LITTLE said:

Mr. SPEAKER: I voted against the original resolution, but shall favor it with the Senate amendments recommended by the conference committee. I desire briefly to submit some considerations influencing my action. There are three hundred and forty-six million legal-tender notes—greenbacks. The holders are entitled to receive coin therefor from the Government on due presentation.

At the date of resumption, January 1, 1879, the Secretary of the Treasury had accumulated for their redemption or exchange over a hundred million dollars in coin. And that sum was set apart and has since been maintained with but few slight and temporary encroachments as a redemption fund. No law in terms requires this, though it has legislative recognition in the act of 1882 for the reorganization of national banks. It owes its existence rather to a principle or rule evolved from common experience and supported by the general judgment of financiers and financial concerns the world over and time out of mind.

Banks of issue—and as respects these notes the Government is little else—however powerful or well sustained by pledges of public support, experience teaches, should have at least 33 per cent. of their issues in coin for redemption purposes. So, while from that time (1879) till this administration came in, six years—and golden years they were in the growth of the country's credit and prosperity—that sum, one hundred millions, was set apart and kept as a redemption fund, a minimum redemption fund. The monthly average amount of coin in the Treasury available for this purpose was upward of one hundred and eighteen millions, or over 33 per cent. of the greenback issue.

The "surplus" during this period, that is, the accumulations of coin above the hundred millions, was regarded as applicable and was applied as it accrued, save as to a "working balance" of, say, eighteen millions, to the reduction of the bond indebtedness. This was not done rigidly and with periodical regularity, but substantially. A wise discretion was exercised in calling bonds. The financial condition of the country and the prospective necessities of the Government had their proper bearing. It sometimes happened the surplus was allowed to accumulate and lie "idle," as one might unguardedly say, in the Treasury. But it was never idle for a great while. The reduction of the debt went on rapidly and with reasonable regularity, as pointed out the other day by my colleague, Mr. MCKINLEY. The present administration has continued this policy of its predecessors, with the exception that it has not used the surplus to the same extent in the reduction of the debt. They reduced the debt over a hundred millions yearly; it, with the same authority and no less means, only about forty millions. It has allowed the accumulations to go up to an average monthly surplus over the

hundred millions of near sixty millions as against eighteen millions under them.

The purpose of the resolution would seem to be to compel the administration to walk more closely in their footsteps. This, as a general policy, is unquestionably to be commended.

But possibly there may be some reason for the variance from Republican ways not apparent to us, having relation to the upholding of the parity between gold and silver coin, and consequently to the maintenance of specie payments and the public credit. It is due to remember that the commercial disparity between gold and silver is still widening, and that the point may presently be reached, under present laws, where the parity of the coins can not be maintained. Gold and silver coin being the money of the Constitution, and their joint use as money being impossible, with one at a premium over the other, it is plainly the duty of the President so to administer the laws, if possible, as to keep both in circulation side by side. And it is as plainly the duty of Congress so to legislate—or refrain from legislation perhaps I should rather say—as that this may be done. To drive gold to a premium would be to take it from the circulation as money, and thus greatly reduce the volume of the currency.

I think we may rest assured that any administration, both from patriotic and party considerations, will always be ready and desirous to use the surplus revenues to the utmost safe limit for reducing the public debt as long as we have a debt. It may be assumed, therefore, that in the judgment of the President and the Secretary of the Treasury there is urgent reason for the course pursued. If that reason relates to the matters suggested and is well founded it would be a public misfortune to compel a departure so radical as the resolution in the shape it left the House contemplated. That proposed the use of all the "surplus" in reducing the debt, by ten-million installments. It contemplated a reversal of the past order of things. For a wise, and it seems to me necessary, discretion it substituted an inflexible rule. No option was to be left to the Government in any emergency.

Commercial disturbances were to be ignored and financial crises disregarded. Come what might, calls must go on with iron rigidity as often as the surplus reached ten millions. Instead of the sum of a hundred millions being the minimum it was to become the maximum redemption fund. True the measure applied only to the callable bonds; but if wise legislation as to them, why not extend it to the '91's and all others as they mature? We are dealing with a principle as well as with existing conditions.

I have said the original resolution would fix the redemption fund at one hundred millions as a maximum. That sum would probably be regarded as the fixed and only proper one for the fund. It being named by law, the Secretary would scarcely take the responsibility, even if he had the power, of suffering a reduction. Prudence, if not the law's command, would forbid. To avoid reduction the sale of bonds would be the resort. Three classes of bonds, under the resumption act, may be sold for redemption purposes, falling due in ten, fifteen, and thirty years, and bearing interest at 5, 4½, and 4 per cent. respectively.

It has seemed to me that the resolution in its original form might be made to operate practically to substitute these long bonds for those called. Suppose when the surplus should be used under a ten-million call—when, in other words, the redemption fund is down to the quick, ten millions in greenbacks should be presented for redemption, thus reducing the fund to ninety millions, what would happen? To repair it—supposing the Secretary to regard his obligation as suggested and that the revenues were only enough at the time to meet current demands—would not ten million of bonds have to be sold? Can it be doubted that such a result might be compelled if the bankers and brokers of the country, or even of New York, found it to their interest to do so? If ten millions would not accomplish the end another ten could be added. Bankers would or might be put to extremities under this legislation, impelling to such action as would promise readiest relief.

It is said national banks hold on account of their circulation over a hundred millions of the callable bonds. They would be compelled in short order to substitute or liquidate, and liquidation of course means contraction of the currency. Regular ten-million calls would probably enhance premiums on other Government bonds. If the banks could compel sales by the Government to relieve them in the dilemma it would not be strange if they should do so. The very circumstance of such sales to meet ordinary obligations would tend to weaken confidence and keep down premiums. Doubtless banks are preparing now for substitution. But the process is not a forced one, such as the House measure would precipitate.

I would not thus tie the hands of the Government in an invited contest with them.

Again, the House measure would bring about, as it seems to me, a hand-to-mouth condition of the Treasury necessarily embarrassing and harmful. Every available dollar in it when the surplus reached ten millions would be appropriated. Suppose the measure in force, that amount of surplus on hand, and a call made and pending, when Congress should make an appropriation for immediate use of five or ten millions, such as it is liable to do any day, where is the money to come from? Would we be required to wait till it accumulates?

It is common to hear the redemption fund and surplus spoken of as "idle money," locked out of circulation. There could be no greater error in my opinion. It is no more idle than the specie reserve in the old banks of issue was idle. Every dollar represents and has $3 in active use.

But it is said few greenbacks have been presented for payment, and therefore the coin is not needed. This shows only how effective the reserve is doing its work. The knowledge that the coin is ever ready to take it up keeps the greenback out. Destroy that confidence by making it impossible to redeem and you will see the Treasury flooded with greenbacks. If every greenback dollar had a representative coin dollar in the Treasury the latter would not be idle any more than gold and silver dollars there are unemployed which represent, dollar for dollar, the gold and silver certificates circulating as money. Such security would be useful in times of financial stress and storm. Then a panic or breath of war would not start greenbacks to the Treasury for coin, as I fear would be the case with existing means of redemption. This is a consideration that reconciles one to the idea of buying silver and piling it up in the Treasury, cut into dollars, as a temporary policy. It broadens and strengthens the material and effective greenback foundation.

Mr. Speaker, the Senate amendments recommended in the conference report propose a working balance of twenty millions in addition to the hundred-million redemption fund, and give the Secretary of the Treasury power in emergency to suspend the execution of the law. I am willing for that. But I am not willing to indorse a measure in my apprehension founded in fallacy and involving, potentially, a contraction of the currency by the retirement of gold, an injury to the public credit, the subjection of Treasury operations to the will of syndicates, and the embarrassment generally of financial administration.

The Senate amendments are substantially retained by the conferees, except that relating to the trade-dollar. It is to be regretted that some measure could not have been agreed upon respecting it. But I shall vote to sustain the report. It gives us a law forcibly indorsing the methods on this subject of former administrations—and doing little else—without tying the hands of this one. That is well and timely.

Coast and Geodetic Survey.

SPEECH

OF

HON. HILARY A. HERBERT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 24, 1886.

The House being in Committee of the Whole on the state of the Union on the bill (H. R. 9474) making appropriations for the sundry civil expenses of the Government, the pending paragraph being in reference to the Coast and Geodetic Survey, &c.—

Mr. HERBERT said:

Mr. CHAIRMAN: The Coast Survey of the United States was inaugurated seventy-nine years ago. During that time this bureau has acquired considerable reputation among the scientific bodies of the United States and perhaps throughout the world; but it has so far failed to complete for the first time the survey of our coasts.

This has not resulted from any want of liberal appropriations, but, as I shall endeavor to show, from a spirit which has animated that bureau from the beginning—a purpose to continue its existence as a bureau indefinitely.

Congress has been exceedingly patient about it; but occasionally it has made inquiry as to when this work would be completed. In 1857 Professor Bache, then the Superintendent of the Coast Survey, said in a letter to the Secretary of the Treasury:

> In determining the scale and mode of executing the Coast Survey it should be considered that the work is a temporary one, having a limited object, the surveying of a definite extent of coast; taking all the operations into consideration, the Atlantic sections are more than half done, the Gulf (of Mexico) sections are nearly one-third done, and both can, at the present rate of appropriation, be completed in from ten to twelve years by close economy and thorough efficiency of arrangement.

Now, a special commission, of which I was a member, was organized two years ago to inquire into the work of this bureau.

We examined Professor Hilgard, and he stated that within five years from the time in which he then spoke the survey of the Atlantic coast would be completed, and that within nine years from that time the survey of the Pacific coast would be completed. In other words, what Professor Bache said twenty-nine years ago would be completed in ten to twelve years, the Atlantic coast, Professor Hilgard now says will be completed in five years. We have, therefore, in twenty-nine years gained at most only seven years. Now, if we count out the four years of the war, and I contend that that is certainly more than fair, because the work went on, appropriations were made, and the work progressed during that

period, we have twenty-five years in which we have done, upon Professor Bache's original calculations, simply seven years' work. In other words, if we were then twelve years off from the completion of the Atlantic coast, and we have since done twenty-five years' work and are still five years from the goal, it is a simple question of arithmetic as to when we will get there. We have only to divide the twenty-five years' work we have actually done by the seven years of progress we have made, and we find that we must multiply the future calculations of Coast Survey Superintendents by three and one-half in order to approximate actual progress. Multiplying Professor Hilgard's five years for the completion of the Atlantic coast by three and one-half, and we find that seventeen years will take us into the beginning of the next century. Multiplying his nine years by three and one-half, and we find this thirty years will bring us at least to the year 1915 before we can expect the first survey of the Pacific coast to be completed.

The Coast Survey was organized in 1807; therefore this survey will have gone on for one hundred and eight years before it completes its first round of our coast. This survey was begun under Thomas Jefferson. It was his opinion that such a survey was needed then. When we consider the energy of our people and what private enterprise has accomplished, I venture to say that they should have consented to this extraordinary delay in the progress of an important public work is one of the most marvelous facts in the history of human affairs. The calculation I have made is more than fair to the Coast Survey because Professor Bache made his estimate expressly upon the hypothesis that the appropriation should continue at the rate of $463,000 per annum—what was then allowed. The actual average since that time has been $549,000. If we multiply the thirty years between us and the completion of this work (as we get it by testing Hilgard's prophecy by Professor Bache's) by the annual sum of $549,000 we have $17,470,000 necessary yet to complete this work.

Calculations like these I know, Mr. Chairman, are of little value for the purpose of ascertaining when this work will be completed, but they do serve to show how little can be placed on estimates of this character that may come from the Coast Survey. Professor Bache was one of its most illustrious men. No man in that bureau ever had a higher character. He estimated that in twelve years at $463,000 per annum the work on the Atlantic and Gulf coasts would be completed; in other words, that it would take $5,556,000 to do this work. Since he spoke over $16,000,000 have been expended, probably not one-fifth on the Pacific, and still Professor Hilgard estimates that it will take five years to finish the Atlantic coast. There is only one mode in which we can relieve Professor Bache's estimate from being absolutely discreditable to him, and that is by supposing that he calculated upon the hypothesis that the bureau would confine itself to the work in hand and that instead of doing this it has expended millions of money in departures from and additions to the purposes the Coast Survey had in view in 1857 when he spoke. That this is true, at least in part, and that this excuse for Professor Bache does exist to some extent, will appear, I think, as I proceed. Now, let us be a little more particular, a little more specific, and go back and see what was the purpose of this survey. I send to the Clerk's desk the act of 1807 and ask that it be read.

Mr. WARNER, of Ohio. Will you tell us where the money has gone to?

Mr. HERBERT. I will tell all about that.

The Clerk read as follows:

An act to provide for surveying the coast of the United States.

Be it enacted, &c., That the President of the United States shall be, and he is hereby, authorized and requested to cause a survey to be taken of the coast of the United States, in which shall be designated the islands and shoals, with the roads or places of anchorage within 20 leagues of any part of the shores of the United States, and also the respective courses and distances between the principal capes and headlands, together with other such matters as he may deem proper for completing an accurate chart of the coast within the extent aforesaid.

Mr. HERBERT. Now, you see, according to the purport of the original act, the sole purpose of this survey was to make an accurate chart of every portion of the coast of the United States; in other words, a nautical map to warn sailors against the perils of the sea. Nothing else at all. No other purpose appeared in any act or law relating to the survey of the coast until the year 1843. This bureau originally was under the Treasury Department. Its progress seemed to be very slow, and after remaining there for ten years the work was transferred to the Navy, where I think it ought to be now, because I believe that other countries are right when they put nautical map-making under the charge of their navy. I believe that the sailor, the man who looks upon the land from the sea, ought to make maps to be used on the sea, and not the landsman who looks upon the sea from the land. As I have said, Congress, because I suppose the progress was slow, transferred the survey of the coast in 1817 to the Navy. In 1832, the progress not being satisfactory, it was retransferred to the Treasury; then in 1834 again to the Navy; in 1836 again to the Treasury, and there it has remained ever since—for a period of fifty years this has been a civilian bureau.

Now, in order to make nautical charts some survey of the land along the coast is necessary, as a matter of course. But the purpose being to warn sailors against the perils of the sea, we would naturally suppose that the principal portion of the work was to be done on the water—soundings in the channels for the rocks and shoals. These are to be delineated on the map; and you need on the map just enough of topography to enable the sailor to know where he is.

You want for nautical purposes only those objects which can be seen by the sailor from on shipboard.

In 1843 the whole bureau was reorganized, and from that time on till now naval officers, detailed to work under the civilian head of the Coast Survey, did the work on the water. They made the soundings and reported to the chief of the bureau, who had the maps made and the shore topography done.

That civilian bureau, as I have said, has been in possession of the Coast Survey from that time up to this. Up to 1843 the expenditures were not large; but all together they have been, according to the report of a majority of the present commission, $20,000,000. In this estimate the majority include the four millions paid for the expenses of the work done by the Navy.

Now, $4,000,000 from the pay of the Navy have gone to this work and $20,000,000 have been appropriated directly to the Coast Survey since its organization. The work on shore consists of trigonometrical work, astronomical work, and such other work as is necessary accurately to ascertain points and to determine the latitude and longitude. It is just by reason of its accuracy in these things and its great care that the bureau has gained reputation among the scientific people of the world. There is no doubt about the fact that its points have been determined and fixed with great accuracy. But the question is, have we not paid too dear for the whistle? Has not this cost more than it is worth?

While objecting to the plan which has been pursued, I find no fault with the survey, because it takes pains to be accurate in its work. Its surveyors ought to be very careful, and they are. Sometimes they stay six months at one point to determine accurately the latitude and longitude. I do not object to this if it is necessary. But I call attention to it for the purpose of saying that work as expensive as this may easily be carried too much into detail. And the question arises, has not too much of this expensive work been done, and has not the Survey spent too much money—first on topography?

Professor Hilgard gave us an estimate as to the relative cost of the topography, the trigonometrical work, and the hydrography. It will be borne in mind that the hydrography is that portion of the work which is done upon the water, done by the sailors, under the control of this civilian department. Here are his figures: He estimates that the cost of the trigonometrical work is two-tenths of the whole, and the cost of the topographic work four-tenths of the whole. So that, taking $20,000,000 as the aggregate, you have two-tenths of it, $4,000,000, as the cost of the trigonometric work, and four-tenths, $8,000,000, as the cost of the topographic work, the two items together making $12,000,000. He then says that the hydrography, the work on the water, costs three-tenths of the whole; that would be $6,000,000. So that the cost of the topography, the work done on the land, is twice as much as the cost of the hydrography, the work done on the water.

Mr. WARNER, of Ohio. Can the gentleman inform us how far back from the seashore this topographic work extends?

Mr. HERBERT. Professor Hilgard answered that question. He said that as a rule it extended back from 1 to 3 miles; sometimes very much more and sometimes very much less, but that he stated as the general rule.

Now, let us stop right here and ask ourselves the question, are these the just and proper proportions in which to expend this money? I contend not.

Mr. WARNER, of Ohio. They could employ more men that way.

Mr. HERBERT. Of course they could employ more men that way and spend more money and take more time, and before I get through with this bureau I propose to show that they have determined never to finish this work until they get themselves established as a bureau doing other work, geodetic work for example, throughout the whole country, which will last an indefinite length of time, and at which they can continue just as long as the money of the people of the United States will sustain it.

Mr. LORE. How does this method of coast survey correspond with that adopted by other nations?

Mr. HERBERT. I will answer that question presently. I wish to say now, as I was about to say when interrupted by a question, that the majority of the commission, my friend from Indiana, Mr. LOWRY, and my friend from Connecticut, Mr. WAIT, when they came to this point, in answer to these criticisms which were made in the commission and which I press here, said that they could not undertake to judge of this matter; that it was not for them to decide whether there was more topography than there ought to be, because the maps of this bureau had met the approval of scientific men in this and other countries. They were unwilling to criticise what the scientific men of the world said was properly done.

Who are these scientific men? Members of the Academy of Sciences, professors in colleges, gentlemen who sit in their studies and pore over mathematical and astronomical problems, and who may never have been to sea. Are they the men to judge of nautical maps? It seems to me that the educated sailor is the expert who should decide this question.

Mr. WARNER, of Ohio. Yes. What does the sailor say about them?

Mr. HERBERT. They condemn this elaborate, extended, and expensive topography. Their judgment is, as I will show, that after it is all completed at this great expense, it really is not worth the cost of engraving and printing.

But to go back to the question I was discussing—the cost of this topography. This is not the first time that this question has been raised. Away back in 1878, when Congress had before it the question of the consolidation of the scientific bureaus, at the time when the present Geological Survey was formed out of the four surveys then running west of the Rocky Mountains, this question was considered. The Academy of Sciences reported upon it; it was examined and commented upon by Army officers and by naval officers, and these officers at that time contended that this topographic work was needlessly expensive. General Comstock undertook to say that it cost nearly $500 a square mile, and the reply was made by the then superintendent of the bureau that the most expensive of it cost only some $98 a square mile. I call attention now to this contention eight years ago for the purpose of showing that when the present commission asked Professor Hilgard for a statement of the relative cost of the topographic, the trigonometric, and hydrographic work he knew very well its importance and its bearing; he knew well that calculation was to be made which has been made, and of course when he gave his statement he made it as favorable to the bureau as he possibly could.

Mr. GLOVER. May I ask the gentleman a question?

Mr. HERBERT. Yes.

Mr. GLOVER. I want to ask the gentleman whether the law does not require that these surveys shall be made for purposes of defense as well as for purposes of commerce, and whether that requirement does not account for the details which he criticises?

Mr. HERBERT. My friend asks me whether there is not a provision that this work should be made for purposes of defense also. I will read the language which was used for the first time in the plan proposed by the board according to the act of Congress in 1843. As a part of that plan I read the following:

From the points thus furnished—

After speaking of the triangulation—

by the several triangulations, the topography shall be executed, using always the most approved instruments and principles, the topography to be carried inland as far as may be necessary for a proper delineation of the shore, and for purposes either of commerce or of defense.

Now, how much is necessary for purposes of defense? I will answer that question briefly here and more at length when I come to comment on those maps which illustrate my argument. For purposes of defense we want to know any commanding position and the roads. That is all. We do not wish to know the "cultural features," as they are called in the technical language used in this survey; that is to say, the houses and fences and things of this character; for as they change and shift, the delineation of such things, unless wanted for immediate military purposes, only tends to confusion. In this respect the delineation of them is worse than worthless. We have the testimony of Professor Hilgard himself on this very point. He states, on page 155, that the country has been built up so much on the coast of Long Island that the shores could not be recognized from the old maps. Why? Because of any changes in the shore itself? No; the changes have been in the "cultural features;" that is the reason the old maps are now confusing. If we had done as other governments have done, if we had exhibited on our maps only the roads and the prominent natural features, this confusion would not have arisen. If there is a stream or a hill or a mountain it ought, of course, to be put down.

Mr. GLOVER. I would like to ask the gentleman whether the maps prepared under the direction of the Navy Department—the hydrographic maps——

Mr. HERBERT. I will answer that question when we get to these maps. If the gentleman will allow me to progress regularly, I shall get through sooner and much more satisfactorily to myself. When the gentleman's question properly comes in I will answer it with pleasure, in fact I intend to answer it whether he asks it or not, but I shall be very glad to have him call my attention to it.

I was discussing the cost of this topography. Professor Hilgard, when he was asked this question about the different proportions, knew that this very criticism would be made; it was with this understanding that he gave these proportions. The ascertainment, therefore, of the cost per square mile of the topography executed by the Coast Survey is simply a question of mathematics. We have merely to take the number of square miles of topography as reported by the Coast Survey and divide by that the amount of the money expended—$20,000,000.

In document 270, an official publication of this Government, compiled by Captain Wheeler, we have exact data. In January of the present year he asked the Coast Survey (in order that he might put the answer in his book) how many miles of topography it had executed. The answer was given, and upon that answer the calculation was made by Captain Wheeler. Taking altogether the $4,000,000 expended by the Navy Department in executing the hydrography under this bureau and these $20,000,000 appropriated directly to the Coast Survey, the cost per square mile has been $333. But if you deduct the $4,000,000, giving Professor Hilgard the benefit of the supposition that he meant his remark to apply only to the Coast Survey, and there is no evidence that he did, we have as the result $275 for every square mile of topography executed.

This is the very lowest figure that can for a moment be contended for. But the fact seems to be that Captain Wheeler is right, and that the cost is really $333 per mile.

And now, sir, expensive as it is, do the real experts, the sailormen of this and other countries, do they approve of this topography? The evidence is that they do not.

Let us look at one of these maps. Here is a Coast Survey map—a chart of New York Harbor. Here [illustrating] is the city of New York; this is the East River; this the Hudson River. Here is the topography, extending all over Long Island and away down to Coney Island. Upon that map we find delineated not only every road but all the fences, every watermelon patch, &c. Then coming down here to Staten Island we find portrayed, first, these heights. The topography is executed with great care.

Mr. BOUTELLE. Is it not to be presumed that these minute topographic details have been given by the officers of the Government in pursuance of law? And has it not been the object to make these topographic surveys as accurate and minute as possible for military purposes? That, it seems to me, would be a sensible assumption.

Mr. HERBERT. The law no doubt provided that so much of the topography should be portrayed as was necessary for purposes of commerce and defense.

But let me ask you whether there is any necessity, for purposes of defense, that these cultural features should be portrayed all over Long Island?

Mr. LONG (pointing to the map). Was not Washington's battle of Long Island fought right in here?

Mr. HERBERT. Yes; but these fences portrayed on this map were not there then and they are not there to-day, and if the fences now there should be put on a new map they would not be there five years hence.

Now, let me tell you how much the topography on that map has cost the Government. An estimate has been made by a naval officer, and I suppose he is correct, that that topography cost something like $90,000.

Mr. LONG. On this one chart?

Mr. HERBERT. Yes, sir; the topography there on that one chart, not including engraving, cost the Government of the United States $90,000.

Now, let us turn this chart over and look at the one beneath it. [Turning to another map.] Gentlemen will bear in mind that the map which we have turned over was the chart made by the Coast Survey for the United States Government, costing $90,000 for topographical work alone, and this chart which you now see is a reproduction, a reproduction from the other by the British admiralty.

Now, the British want on a map of New York Harbor precisely the same features we want. Whatever is necessary for our sailors on approaching the port of New York is necessary for theirs, and whatever features upon the map would be useful to us in defending would be useful to them in attacking our coast. We all know that the accurate maps made by France were invaluable to the Germans in their successful campaign in the Franco-German war.

Here you see by this reproduction that the British admiralty in reprinting this map, putting on it all their sailors will need and all the topography they will ever want for the purpose of attacking us, have left off all the elaborate cultural features. The work that cost this Government tens of thousands of dollars they do not consider worth printing. Of course they put on the roads; they print all the soundings because they are needed.

Mr. DAVIS. Do they not get the elevations?

Mr. HERBERT. Oh, yes; they get all the elevations on Staten Island. And everything else needed for attack. These are called natural features. There are the heights; they put them all down. They need them. They are not only useful but permanent cultural features; houses, fences, and lots are evanescent. In a few years they change and then the map is misleading.

Mr. BOUTELLE. Is not that a Coast Survey map?

Mr. HERBERT. Oh, no; this is a British admiralty reproduction of the Coast Survey map.

Mr. VIELE. Is it not a reproduction for the use of their sailors?

Mr. HERBERT. The point I make is that elaborate topography is not necessary for their sailors or they would have it.

Mr. GLOVER. Was the original chart made by the Coast Survey or the Geological Survey?

Mr. HERBERT. It was made by the Coast Survey. I will turn this chart over now so we can see the one that is under it. I have not stated heretofore what it costs to engrave these maps. Now, the engraving of that map of New York Harbor, the topography of which cost $90,000, probably amounted to $10,000 or $20,000. But the engraving of this map which you now see is much less.

Mr. FARQUHAR. Is the gentleman certain the British Government

have not reproduced more than one chart—that it has not reproduced a navigation chart as well as a general topographical chart?

Mr. HERBERT. No; I know nothing about that.

Mr. FARQUHAR. There may be three charts furnished.

Mr. HERBERT. Let us see what the date of this is. It is 1877.

Mr. DAVIS. Is it not necessary for us to go more into detail than the British Government?

Mr. HERBERT. Well, the Coast Survey people seem to think it necessary to do a great deal of expensive topography which the British do not seem to think is worth printing after it has been done.

Mr. DAVIS. This is our country.

Mr. HERBERT. Yes; and this is our Coast Survey, too.

Now, we turn to the charts of the coast taken by the Hydrographic Office, which is now conducted by a sailor, and is better, perhaps, than heretofore. In this map the topography is left out. Here you see the soundings and the lines of the shore.

Now, it is true the Hydrographic Office has in time past indulged in some of these topographical extravagances that are so unnecessary——

Mr. GLOVER. Does the gentleman mean recently?

Mr. HERBERT. I will come to that presently. I do not say they are entirely free from criticism; but the fact is that in these later days this elaborate topography is even more unnecessary than in the past, because we have now an expensive system of buoys, light-houses, range-beacons, and other guards along our coast, so that the navigators are more frequently guided by them than they are by the topography as laid down in these charts. Topography is much less necessary on that account than formerly.

The Hydrographic Bureau of to-day makes these maps generally in the simple form indicated in the map now before us. The shore lines are indicated and the soundings marked. If there is any one map of theirs where topography has gotten in more than was necessary——

Mr. GLOVER. Let me ask the gentleman on this point if he has seen the recent hydrographic charts.

Mr. HERBERT. I must decline to yield now. I was about to refer to the map of the Bahamas, and the continuation of the South American coast which was partially a reproduction of the Coast Survey map, and in which this topography was not eliminated. But the rule of the Hydrographic Office is as I have stated. That is also the rule of the British admiralty.

Here is another Coast Survey map I wish to show you as a specimen of expensive topography. This is the island of Mount Desert. These elevations are all shown not by contour lines, which would be cheaper, but by hachures, the most expensive kind of engraving. This is now a great watering place, but was not at the time this map was made. I do not mean to say that this map was made in that interest.

Mr. BOUTELLE. This was made before anybody ever thought of it for that purpose.

Mr. HERBERT. I am not asserting anything to the contrary; in fact, I had said that it was not a watering place when the map was made.

Mr. BOUTELLE. It was made at a time when Mount Desert was regarded as one of the greatest natural curiosities in the world, and which it still is.

Mr. HERBERT. Of course, and just because it was one of the greatest natural curiosities in the world, and of little or no use to the sailor, this very elaborate map was produced. That map cost thousands of dollars, the mere engraving of it after the topographic survey had been made. That is a fair sample of the practical working of this bureau under the present system. Thousands of dollars are expended upon an elaborate map of this great natural curiosity, whereas 47 miles of your own coast are yet unsurveyed, and that too the very part of which accurate surveys would be most useful to your fishermen. This survey has been going on for seventy-nine years, and we find this island beautifully mapped and the coast of Maine neglected.

Mr. BOUTELLE. You might make the same application with reference to all the other surveys.

Mr. HERBERT. I do; that is exactly my point. It is the same thing all along the coast; but I am calling attention to these particular points simply as illustrations.

Now we come to another Coast Survey map. This is the map of the coast of Massachusetts, with which my friend, Governor LONG, is well acquainted, showing Martha's Vineyard and Nantucket. Here is Martha's Vineyard, and all of these fences and other features are portrayed very clearly. If gentlemen will put on their spectacles and look at it closely they will see how liberally the work has been done, showing the minutest details of natural and artificial features. This coast survey extends, as will be seen, 2, 3, or 4 miles back, across the entire width of the island. I do not know how wide it is at this point, and will ask the gentleman from Massachusetts.

Mr. LONG. It is perhaps ten or a dozen miles across, I should say, at that point.

Mr. HERBERT. All of this has been carefully and accurately surveyed. Now, what is the use of that? Certainly it is of no use to the sailor. Look here at all these lines of fences and other features illustrating the exact topography of the land; are they of any use whatever to the mariner? Are they useful for purposes of defense?

Now, for the purpose of contrast I wish to show you a map which is the result of private enterprise.

Mr. BOUTELLE. You hold that they went over more ground than was necessary?

Mr. HERBERT. I hold that they stopped too long and spent too much money on such features as I have pointed out.

Now, here is a map which is gotten up by a Mr. Eldridge, of Boston. I suppose some of you gentlemen here know him.

Mr. DAVIS. Before the gentleman passes from this point let me ask him if this is not a part of the general system of surveys of the interior of the country as furnishing base lines for correct geographical surveys of the whole interior of the country?

Mr. HERBERT. No, sir; the transcontinental surveys are established for that purpose.

Mr. DAVIS. But they triangulate from the coast where the base lines are fixed by the Coast Survey.

Mr. HERBERT. Yes, sir; sometimes. But this Coast Survey Bureau was not established for the purpose of furnishing points for such surveys. The survey under consideration has exclusively to do with coast work.

Now, this other map is made, as I have said, by Mr. Eldridge, of Boston.

Mr. LONG. A private enterprise?

Mr. HERBERT. Yes, sir. This map represents that the surveying was done by Eldridge, the publisher; but we know he did not make the survey, although he may have made some corrections. The map is a reproduction of a Coast Survey chart. Now observe that he leaves out all the useless topography of Martha's Vineyard and Nantucket. He is making maps to sell to sailors and so he leaves out that topography, which is conclusive proof that it is not worth printing. Eldridge shows simply the shore lines and such objects as can be seen by the sailor from his ship.

Now, it will not be necessary to make that map over again so far as the shore line is concerned until the shore itself is so washed and changed that another survey will be necessary. But if this publisher had put upon it all this elaborate topography of the Coast Survey fences, houses, &c., then, whenever these fences should be changed and new houses built, new maps would be necessary. Otherwise, as Professor Powell said in his testimony, the map itself would be confusing. In some parts of Massachusetts, he says, you can not now tell the coast from the old map because these features have been growing and changing so rapidly. These maps of Eldridge are sold to the sailor at higher price than those of the Coast Survey. Eldridge makes money by his reprints because he knows what the sailor wants. If our Coast Survey had confined itself to practical map-making, seeking to meet the wants of the sailor instead of attempting to gain the applause of professors in their college chairs, this survey of the coast would have been finished long ago.

Now, sir, I have called attention to these maps for the purpose of showing that the judgment of the Hydrographic Office and the judgment of the British admiralty, sustained by that of the sailors of the world, condemns this elaborate topography as useless. Not only Americans, but all the world, buy maps from Eldridge, and sailors want no more topography than he prints.

Mr. BOUTELLE. There is topography on that map. You can not do without it.

Mr. HERBERT. Of course there must be topography, but the gentleman can not have listened to me or he has not understood me if he thinks I mean to say that all topography is useless. I said no more topography was needed by the sailor than what he could see. What he can see from his ship he wants—that is, the permanent, natural features.

Mr. BOUTELLE. Suppose on the coast the principal and only object observable is a mountain 5 miles inland—should that be on the map?

Mr. HERBERT. Certainly; that should be there.

Mr. BOUTELLE. What rule would you be guided by in putting on those objects? You would not put them on helter-skelter?

Mr. HERBERT. I repeat that the gentleman can not have listened to me or he would not misunderstand me, as he seems to do. I say these features ought to be there—all the mountains, all the rivers, all the creeks should be there; but there is no necessity for any more. The natural features are enough. What I complain of is that the survey devotes too much time to, and spends too much money upon, elaborate topography, and neglects to complete the survey of the coast. The sailor wants maps of the whole coast. He ought to have had them long ago. There has been an expenditure of $12,000,000 on topography, while only six millions have been devoted to making these soundings.

Mr. LINDSLEY. Could they have made the soundings accurately without first making the topography?

Mr. HERBERT. They could get the soundings accurately, of course, when they get the shore line and such of the objects on shore as Eldridge puts down, but I repeat there is no need of this elaborate topography.

Mr. BOUTELLE. You refer to the drawings——

Mr. HERBERT. I refer to the taking down of every fence and the accurate delineation of everything that is there along the coast. I will show the gentleman another map.

Mr. DAVIS. I want to make another suggestion. Is it not a fact

that Eldridge's map is considered more valuable because it is of more recent date? Owing to the shifting character of the coast, when composed of live sand and the currents changing, is not Eldridge's map of more value because of the recent date? And is there not another reason for his map being valuable, that it is based on Mercator's Projection, which is more familiar to sailors?

Mr. HERBERT. It is taken from the Coast Survey map.

Mr. DAVIS. With some additions. I understand he claims it is more valuable because on some points where changes have occurred he has shown those changes, and I see it is published in 1885.

Mr. RANDALL. That is not a later work, but a later print.

Mr. HERBERT. Let me go on. The Coast Survey is now resurveying Long Island Sound. Here is a map of Bridgeport, and I find here [pointing it out] figured Barnum's circus, his winter quarters. In another place is his residence. Will any of these inquisitive gentlemen, who seem to find it so difficult to understand the difference between such topography as Eldridge prints and that over which the Coast Survey lingers so long—will any of these gentlemen tell me that a coast chart ought to show where Barnum's menagerie is and where Jumbo made his headquarters?

Mr. CUTCHEON. That is for the information of the horse marines, I suppose.

Mr. HERBERT. And for their information only. In this very bill we are considering there is an appropriation for a resurvey of Long Island Sound. One of the maps I exhibited shows that on both sides of that sound the topography was taken years ago. There [pointing to it] is the map showing the north and the south sides of the sound and there is the topography extending back 3 or 4 miles.

This old survey which cost tens of thousands of dollars, and this new survey costing tens of thousands more, is rendered necessary solely because the old maps contained cultural or artificial features which have changed, and now in this new survey the same mistake is being committed. Barnum's circus and a thousand other features more ephemeral are being mapped at Government expense. At the very time this resurvey was going on at such great expense of time and money Professor Mitchell, one of the Coast Survey officials, testified before our commission that the soundings needed to be taken again along Nantucket shoals because the true location of those shoals was not known, and that millions of property passed there in a single day and could not take the shortest route but was compelled to go out of the way for want of resoundings. That is the way they have neglected the real work the Coast Survey was organized to perform.

Mr. LONG. Is not that the result of changes from the shifting of the sands?

Mr. HERBERT. That the sands have shifted is true; but that the sailor does not know now, that he does not now know where the true channel is, is the result of neglect, a shameful neglect, by the Coast Survey of the work it was set to do. If a portion of the vast sums of money spent on Mount Desert and on this useless topography had been spent on resounding Nantucket shoals we should know to-day where the true channel is, and thus time and money would be saved to our coastwise commerce. Mr. Chairman, we shall always have a necessity for a coast survey; that is to say, for resoundings. As the gentleman from Massachusetts [Mr. LONG] has suggested, the sands are always shifting, and these resurveys ought to be made in order to warn the sailor of the everchanging perils of the deep. That is where the money ought to go. But the fact is that the Coast Survey Bureau knows very well that the moment the topography of the country is completed Othello's occupation will be gone. Naval officers, under the direction of this civilian bureau, now make these soundings. They will always do this work, and there will be no excuse for the perpetuation of this expensive bureau for surveying the coast when this topographic work is completed.

Every one, I believe, admits that when that work is done the time will have come to consider the propriety of the transfer of the work to the Navy Department. The majority of the commission say that when this survey of the coast—the topographical work—shall have been completed we ought to consider this question; but they hold that the transfer ought not to be made before that time. Sir, that is a dangerous utterance. If the Coast and Geodetic Survey understands that it is to hold on to this work until it is completed, when will that day come? I venture to say, sir, it will not come during the life of any gentlemen who now listen to me. In my opinion we ought to transfer this work to the Navy now—all of it. It is true that years ago it was transferred two or three times back and forth between the Treasury and the Navy Departments; but at that time we did not have such a body of officers as we have now; we did not have our Naval Academy, which has given us a well-educated corps of officers, amply qualified, as the testimony before the commission shows, to take charge of this survey.

Now, what else? I was asked the question whether this accurate triangulation was not a part of the work done to aid States in making their surveys, and I answered that it was not.

But from the very beginning—and I have set forth in the minority report the evidence to establish the fact—from the very inception of this bureau there has been a disposition manifested and an intention clearly shown to get out into that illimitable field of geodesy. When the survey began on the coast of Maine the coast was neglected (47 miles of which is not yet surveyed), and triangles were extended entirely across the lower portion of the State, far back into Massachusetts. This disposition to get away from the coast and into the interior has been manifest from the beginning till now. Then afterward, about 1868, they began an independent system of triangulation along the Appalachian chain, commencing in Pennsylvania; they carried it along down that chain until now they have reached the State of Alabama. What is the purpose of that triangulation and where is the law to justify it? I asked a Coast Survey officer to cite me to the law authorizing this work. To me it seemed that it was done to consume time, or perhaps not so much for that as for the purpose of getting out into a new field of work which would perpetuate the existence of the bureau after the time should come, if ever, when the topography along shore should be completed and the Navy would claim the work. The officer could cite no statute authorizing this triangulation, but said that it was estimated for 1868.

I looked at the Book of Estimates for that year and found an estimate of, say, $15,000 grouped with a lot of other estimates, amounting, we will say, to $75,000 (I will not be accurate about the figures), and the appropriations for those items would amount to, say, $40,000; so that from looking at the estimates and at the appropriations made, which did not mention anything of the kind, nobody could see that there was any such survey provided for. In that way, by these "unobtrusive appropriations" inserted in the annual bills, it went on for several years. This is a fair sample of the subtle methods resorted to by this bureau to draw money from the Treasury and perpetuate its existence.

Mr. HOLMAN. To what extent were geodetic surveys made by the Coast Survey prior to 1868?

Mr. HERBERT. I think the first of that work was done in 1868. That is my recollection. In 1871 there was ingrafted upon one of the appropriation bills authority to fix points for State surveys and to run a grand system of triangles across the continent. What was that for? It was done, of course, as all the evidence shows, at the instance of the Coast Survey, and the testimony quoted in the report of the commission abundantly establishes their intention to become a bureau for carrying on this geodetic survey before they should ever relinquish the work of the Coast Survey.

I make no criticism upon the character of the geodetic survey. There is no doubt that it is very accurately and well done, and that in no country has it ever been done better; but it is also true that it is very expensive, and in my opinion it is far in advance of the wants of the present day, except possibly that portion of it which provides for the fixing of points for State surveys.

Mr. LONG. What do you say about that? Ought that to be interfered with?

Mr. HERBERT. I certainly do not think there ought to be any fixing of points for any State survey unless it is particularly estimated for and a request made for it beforehand, and even then I have great doubt whether the General Government ought to undertake it, because I believe that all the States ought to be treated alike. I do not think the Federal Government has a right to spend money to help the State of Massachusetts, for instance, because it is engaged in a State survey, while it does not help the State of Connecticut, which is not so engaged. If all are engaged in surveys and all are treated alike, then it may be right and proper; but for the General Government to spend money for the benefit of one State and not for another is not, in my opinion, in accordance with the principles on which we ought to make appropriations here.

Mr. HOLMAN. Are not geodetic points established by ordinary astronomical observations with substantially the same accuracy as by the system of triangulation?

Mr. HERBERT. In order to establish those points it requires the use of telegraphic methods, of astronomical methods, and of geometrical methods.

Mr. HOLMAN. But are not the results about the same?

Mr. HERBERT. My own opinion, which is formed after a careful study of the subject, is that in order to secure accuracy all the methods that are resorted to by the Coast Survey are essential.

Mr. HOLMAN. And there is no absolute accuracy after all?

Mr. HERBERT. No; not absolute, but still very accurate.

But to return to the point from which I was diverted. I asked Mr. Colonna, when before the commission, for what purpose this triangulation was made down along the Appalachian chain. He answered that the object was to verify the work along the Atlantic coast. But in reply to that answer I said, "The maps have already been made down there; you have already triangulated that before making this triangulation out on the Appalachian chain." And that was not denied.

I ask gentlemen what can be more useless than the expenditure of thousands of dollars to "verify" the accuracy of maps already made? I think I should dignify this excuse if I should call it a subterfuge, especially from the Coast Survey, who were examined on this question, when we find that this very witness, Mr. Colonna, said there was no error in this triangulation along the coast that was greater than 150 or

160 feet, and that Mr. Schott, who is considered one of the most scientific men in the bureau, said there was no error greater than 50 or 60 feet; and both of them said that on none of the maps could such an error appear, for a mere line on the maps made would represent more space than would be included in 150 or 160 feet. This I take it is proof positive that the triangulation along the Appalachian chain is unnecessary for the purposes of nautical maps. Now, as to this survey across the continent.

Mr. RANDALL. Has the gentleman yet touched on the expenditures for "furnishing points for State surveys?" I have here a statement of the manner in which the money appropriated for that purpose has been expended, and I would be glad if the gentleman could incorporate it as a part of his remarks.

Mr. HERBERT. I have not looked at the statement, but I will do so.

The statement is as follows:

Statement of expenditures on account of the appropriation for "furnishing points for State surveys" for the fiscal year ending June 30, 1885, and for the period from July 1, 1885, to June 23, 1886, showing name, official position, name of college to which attached, residence, character of expenditure, where expended, and the amounts expended by each person engaged on the work.*

Unexpended balances						2 09	1,392 52

*Referring to acting assistants temporarily employed under the provisions of paragraph 17, regulations Coast and Geodetic Survey, which reads as follows: "The superintendent may employ temporarily, from time to time, for periods not exceeding seven months in one year, as may be required in the execution of the geodetic and magnetic work, acting assistants, whose pay shall not exceed $4 per working day, and who shall in no case be considered as attached to the normal or permanent force of the Coast and Geodetic Survey: *Provided*, That not more than two such acting assistants shall be employed in any one State at the same time without special authority from the Secretary of the Treasury."

One word more in order to answer the question about this transcontinental system of triangulations. When we asked Professor Hilgard for what purpose he wanted this system of transcontinental triangulations he said, "To tie together and bring into harmony the work on the Atlantic and Pacific coasts." Now, that is a high-sounding phrase, but it means absolutely nothing when you come to look into it. Why? Because the lines of longitude are ascertained by astronomical and telegraphic methods with so much accuracy that it is claimed the officers of the Coast Survey have sat here in Washington and by means of the telegraph corrected the difference in longitude between Paris and Greenwich, which before that time had been relied upon by the English and the French.

Mr. WARNER, of Ohio. If it will not disturb the gentleman, I would like to ask to what extent this geodetic survey, this system of triangulations, is being carried across the continent?

Mr. HERBERT. I was about to say that there is no necessity for this transcontinental system of triangulations, because the lines of longitude are ascertained with so much accuracy without it.

Mr. WARNER, of Ohio. But this triangulation is going on?

Mr. HERBERT. A single grand chain of triangles is being extended across the continent, and is about four-fifths completed.

Mr. WARNER, of Ohio. And what is expected to be accomplished by it?

Mr. HERBERT. When we made that inquiry in the committee the answer was that there ought to be a general geodetic survey of this whole country; that systems of triangulations ought to be run across the country north and south and east and west, at distances of one or two hundred miles apart, in order to afford the basis for a map to be made at some time in the future; that is all there is of it.

Mr. WARNER, of Ohio. But was not the original purpose to determine by those methods of triangulation the figure of the earth, its rotundity, which, of course, as the gentleman has said, can be much better ascertained by astronomical and telegraphic methods?

Mr. HERBERT. I do not agree with my friend that the shape of the earth can be determined by those means alone. Triangulation is also necessary for geodetic purposes, and, of course, one of the avowed purposes is to aid in ascertaining more accurately the shape of the earth.

Mr. STORM. I presume the object of this geodetic survey is to determine the prominent physical features of the continent.

[Here the hammer fell.]

Mr. RANDALL. I will take the floor and yield to the gentleman from Alabama, so that he may conclude his remarks.

Mr. HERBERT. I will finish what I have to say in a very few words. I desire to sum up very briefly the thoughts which I have endeavored to convey, and which have been expressed in a very desultory manner because of the many questions asked me.

Mr. WARNER, of Ohio. Will the gentleman be kind enough to state whether it is the Coast Survey or the Geological Survey that is now carrying on this geodetic work, or whether it is being carried on by both?

Mr. HERBERT. The Coast Survey is doing the strictly geodetic work. The Geological Survey is doing work by the same methods, but with much less accurate results. The Geological Survey uses the points which have been fixed by the Coast Survey when it has them at hand, but does not wait for them. It does its work with a great deal of rapidity, but with much less accuracy than the Coast Survey; at least so the Coast Survey officers claim.

A MEMBER. Does the Geological Survey admit that?

Mr. HERBERT. It does not; but I have no doubt, from the whole testimony, it is true.

On the point that the expensive topographic methods of the surveys render resurveys more necessary, I desired to refer to the testimony of Mr. Hilgard. It will be found on page 155 of the evidence. He says:

> The country is building up on the shores of Long Island Sound, for instance, so that you would not recognize the shore from the old maps.

It would not be so if the cultural features were not put down. Surveys and resurveys, therefore, become necessary. It is an extravagant system and ought to be discontinued.

Now, the gentleman from Pennsylvania asks me a question which I will answer.

Mr. RANDALL. I ask the gentleman from Alabama to insert that paper which states the matter of expenditure of $12,000.

Mr. HERBERT. The Coast Survey has claimed that no one else could do this work as well as it could. That is to say, Mr. Chairman, that the naval officers educated at Annapolis are not competent to do this work. Yet this Coast Survey employs professors in the various colleges throughout the country to do it. In other words, sir, this geodetic work, much of it, is done by professors in colleges, who never had a theodolite in their hands, who know nothing practically about the matter. Every year, I think, the committee puts in an appropriation for that specific purpose, to pay for the employment of these professors. One of the Coast Survey witnesses said in his testimony, "It was to enable the professors better to educate the youth of the country." Is that reason satisfactory to any gentleman here? Is there not rather a political purpose in it? Is it not to secure strength upon this floor in order to prevent the Coast Survey being reformed? I leave you to judge for yourselves.

Mr. DAVIS. Would it not be useful? Perhaps it is fair to say the changes which take place in the topographical features of the country at certain periods ought to be shown and presented by these surveys. We know old maps become valuable as showing the changes which have taken place in the country. How can we preserve any knowledge of these changes otherwise than by these topographical surveys and maps?

Mr. HERBERT. As I take it, all the Government needs is a survey to map out the natural features of the country. For practical purposes

all we want is to put down the shore lines, the rivers, the harbors, the bays, the inlets, the hills, and mountains. These are permanent features.

Mr. DAVIS. Take the harbor of New York, where at the present time important topographical changes are occurring.

Mr. HERBERT. But not over the whole of Long Island. There is no necessity for making the chart of Long Island a cadastral, or property map, showing the boundaries of every man's property. That is what these maps are, really cadastral maps, because they survey every fence and mark them down with as great care as if they were fixing the boundaries of property. But they fix no landmarks for the owners, they settle no disputes about property, for they have no authority or power to do anything of the kind. In fact this elaboration is of no earthly use.

Now, will this House sustain this unnecessary and extravagant system? If so, upon what ground will it be done? Is it because this old spendthrift has become so venerable by age we dare not reform it? I can not see any other reason. Or is it the reason given by the majority of the committee, and that is, we ought not to express any opinion on it because it is approved by scientific men of the world?

I have shown sailors everywhere have no sort of use for these topographical details. It seems to me, therefore, this appropriation bill has not even gone far enough. It proposes to retrench and save some $160,000, but it should go further and cut out some of the appropriations for resurveys.

Mr. GLOVER. I would like to ask the gentleman if he has seen the map of the harbor of Corinto, prepared by the Hydrographic Office in May, 1885?

Mr. HERBERT. That is the map of which I have been speaking, after the establishment of the Coast Survey.

Mr. GLOVER. Does not that map contain the topography of a railroad line, a man's back yard, and all of the objectionable features which the gentleman has referred to in connection with the Coast Survey's maps?

Mr. HERBERT. Well, it is a Coast Survey map.

Mr. GLOVER. No, sir; it is a Hydrographic map.

Mr. HERBERT. I have said that there are some of the Hydrographic maps that contained these features; but I condemn all such maps, no matter whether prepared by the Hydrographic Office or any other. Such a map is not worth the money it costs. No man can justify such an expenditure, or excuse it, unless by saying that he does not understand these things and will not set up his judgment against that of scientific men. That is the ground the majority take in their report.

Mr. RANDALL. You mean the majority of the commission, not of the committee who reported this bill?

Mr. HERBERT. Yes; of the commission who examined this subject.

Mr. BOUTELLE. Let me interrupt the gentleman from Alabama for a moment.

Mr. HERBERT. Yes, sir.

Mr. BOUTELLE. I understood the gentleman to say that the Coast Survey now recommend a resurvey of the Long Island coast by reason of topographical changes.

Mr. HERBERT. I did not understand the gentleman's question.

Mr. BOUTELLE. I understood you to say that the Coast Survey was engaged upon a resurvey of Long Island.

Mr. HERBERT. Yes, sir.

Mr. BOUTELLE. Did I understand the gentleman to say that this resurvey was made necessary because of changes that had been made in the topography of the island?

Mr. HERBERT. I say this: They are making a resurvey of Long Island, and the testimony of Professor Hilgard shows that it is rendered necessary by reason of the changes which have taken place in the cultural features delineated on the old map.

Mr. BOUTELLE. And not by reason of a change of the coast or of shoals along the coast?

Mr. HERBERT. Professor Hilgard gives the reason——

Mr. BOUTELLE. For if he has stated that as the reason, it seems to me to be a most remarkable statement.

Mr. HERBERT. I have given my authority. Professor Hilgard says it is by reason of the cultural features which have been changed since the former survey.

Mr. BOUTELLE. Does he give that as the sole reason for making a new map?

Mr. HERBERT. I have given the language of Professor Hilgard more than once. He says the country is building up on the shores of Long Island; and because it is building up, so that you would not recognize the shores from the old map, it is necessary that there should be a resurvey.

Mr. BOUTELLE. Is that the sole reason he gives?

Mr. HERBERT. That is the reason he gives. The testimony upon this point was very fully and carefully taken and is set forth in the minority report. Much of it is from Professor Powell.

The gentleman from Pennsylvania said that the Committee on Appropriations could not undertake to correct all of these abuses.

Mr. RANDALL. I said we could not undertake in this bill—we could not undertake to do what the gentleman has so elaborately set forth for the reason that it would be a change of existing law. We tried in every possible way to meet his views by reducing the appropriation, and that is all we could do.

Mr. HERBERT. Yes; that was what I was about to say. The appropriation for shore work seems to have been reduced in this bill and most properly so. I trust the appropriation for this shore work will never again be so large as heretofore. Instead of resurveying Long Island shore they should complete the coast of Maine and the works elsewhere along the coast.

Mr. RANDALL. There is a provision in the bill looking to a survey of the coast of Maine from Machias Bay toward Quoddy Head.

Mr. HISCOCK. Let me ask the gentleman from Alabama how far inland do they survey in connection with the soundings?

Mr. HERBERT. The testimony is that they take the topography of the shore from 1 to 3 miles inland, sometimes very much farther, and sometimes much less.

Mr. HISCOCK. Is not that absolutely necessary?

Mr. HERBERT. I think not.

Mr. HISCOCK. I would like the gentleman to answer this question: Does he not understand that every object which may be salient, which may be sighted from the sea, should be included in the survey and marked on the chart? Does he not understand that that is absolutely necessary for the safety of the sailors? Did the gentleman ask that question?

Mr. HERBERT. I did.

Mr. HISCOCK. And do you mean to say that they told you that was not so?

Mr. BOUTELLE. If they did they do not know their business.

Mr. HISCOCK. The point I make is this: That so far as reducing this expenditure is concerned—and I have examined this question a little; I appropriated once for this matter—wherever within sight of the shore there are prominent hills, mountains, anything which is an object which the sailor may use, that the pilot employs and calls into use when he is upon the water, it is absolutely necessary his charts should take in those objects and be a perfect continuation of the survey he has got on the water.

Mr. LONG. In justice to the gentleman from Alabama it should be stated that that is what he has been saying over and over again.

Mr. HISCOCK. I understood the gentleman to say that they did not say that.

Mr. HERBERT. I have said half a dozen times that all these natural objects should be included.

Mr. HISCOCK. Not natural objects merely, but also the artificial objects should be included—light-houses, steeples in the villages, everything that can be recognized by the pilots.

Mr. HERBERT. That brings it right down to a point and is a good illustration of the difference between my contention and the practice of the Coast Survey. I said in the beginning, and I repeat it, that all natural objects should be put down because they are permanent. But in answer to the gentleman from New York [Mr. HISCOCK], I repeat that these cultural objects should not be put upon the map, because they are evanescent and perpetually changing; and if you do it your map will be, as Professor Hilgard says, confusing, because you must keep up with changes in those objects, and as often as a new house or a new steeple is built you must put that down; and if you do that it will cost more money than any government in the world will be willing to pay.

Mr. HISCOCK. You will find, so far as pilots are concerned, that they will tell you it is a great convenience, to say the least of it, to have on their charts every object on the coast with which they become familiar.

Mr. HERBERT. Local pilots have little use for nautical charts. Except for the soundings, they seldom refer to them. They are on the spot all the time. They keep up with all the changes, natural and artificial. They know of the building of every church and every steeple. It is your pilot from a distance who undertakes to bring in his own ship that consults the chart. This is the pilot who wants the chart. If there could be a new survey every month and a new chart engraved and printed the same month, so that he could always have a map showing the cultural features as they exist, then, of course, he would want all the artificial features put down. But the fact is otherwise. These surveys can not be made every month. Years elapse from one survey to another. Years often elapse between the survey and the publication of a map, so that even on the day a map is printed it is incorrect and confusing if it undertakes to put down these features.

But the fact is, sir, that the modern sailor is mostly guided by beacon-ships, light-houses, buoys, &c. These things have increased in our country, and the appropriations for them in all our appropriation bills have increased rapidly for the last twenty years; and just in proportion as the sailor places increased reliance on these aids to navigation he has less and less need for the topography I have been speaking of.

Mr. BOUTELLE. Does the gentleman think the future topographer should include the Bartholdi statue in his map?

Mr. HERBERT. I do, because that will be a permanent and prominent object like a light-house. But I do not think the future topographer will put down Barnum's circus. If he does and asks me to vote money for it I shall refuse to do it.

I thank the House for the courtesy it has shown me.

Pensions and Pension Legislation.

SPEECH
OF
HON. WILLIAM R. MORRISON,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Friday, July 30, 1886.

The House having under consideration the message of the President returning without his approval the bill (H. R. 7436) granting a pension to Mary Anderson—

Mr. MORRISON said:

Mr. SPEAKER: It would seem that very much of what is said here professedly in behalf of the soldiers of the country is not said alone for their benefit, nor for the sole purpose of obtaining for them that relief which we are so often told their patriotism, sacrifices, and sufferings justify and demand.

In the vetoed case under consideration the widow's husband was in his lifetime a pensioner, and was no longer ago than 1882 killed by a railroad train, and in a way not fairly traceable to his Army service. All such cases appeal strongly to our sympathies, but I do not see upon what principle or rule of action we can grant a pension in any such case until we are ready to grant pensions to all the men and the widows of all the men who served in the war, which we are not yet able to do. We have not yet given a pension to the men who served in the Mexican war forty years ago.

When the bill to increase the pension of General Hunter's widow, just disposed of, was under discussion the gentleman from Ohio [Mr. BUTTERWORTH] allowed himself to attribute the opposition to its increase to the fact that General Hunter was one of the officers who tried Fitz-John Porter, and in a spirit of general accusation against the majority the gentleman from Ohio referred to the too liberal pension granted to the widow of General Hancock, but which he says was very properly done and for which he very cheerfully voted. I did not vote for the $2,000 pension to Mrs. Hancock. It was and is without a precedent. It is a new departure in pension legislation which is likely to be expensive. As compared with the great mass of the bereaved and widowed she lives in affluence and plenty. The yearly $2,000 given her might, as I believe, have been more prudently and justly given in sums of $100 each to twenty dependent widows.

The widow of General Hunter receives now $30 per month, the amount the law gives to all widows of officers of her husband's rank. She, too, is blest, at least favored, with great abundance and good fortune. Exceptions and increases in the amounts allowed by general law ought to be allowed only in exceptional cases—in cases of great hardship and to relieve actual want or suffering. This is not one of them.

When one of the first vetoed pension bills was considered the President was criticised and accused of placing the stigma of desertion on the memory of the dead soldier, when the fact was the President but stated what appears in the records of the War Office, where the charge of desertion was placed twenty years ago and still remains.

Mr. TAULBEE. Will the gentleman allow me?

Mr. MORRISON. Yes, sir.

Mr. TAULBEE. I presume you refer to the case——

Mr. MORRISON. Of Tiller, who claimed as alleged dependent father of the deceased soldier. I think it was the Tiller case.

Mr. TAULBEE. I will be glad if you will state who accused the President during that discussion. I advocated that claim.

Mr. MORRISON. Not the gentleman from Kentucky, who is always fair in debate, and who said that with the facts before the President the veto was justified. But that was not the character of all the discussion in the vetoed cases, much of which was in the same spirit of partisan, unfair, and unjust criticism which marks most of the pension discussion in and out of Congress.

On Friday evening last when the bill giving a pension of $50 a month to the widow of General Stannard, the dead messenger of the House, was passed with no vote against it the gentleman from Ohio (General GROSVENOR) availed himself of the customary courtesy and took leave to extend his remarks in the RECORD, which he did two days later, saying, among other things:

> I have no word to say against the honest confederate soldier. I do not wonder that they do not feel the zeal in this behalf that we do. I say, Mr. Speaker, that these confederate generals and colonels and majors and captains and statesmen have been vastly out of proportion in their liberality as compared with the Northern Democrats. The men who in this Congress have hedged the way to the relief of the soldier have not been the confederate gentlemen, but have been the Democratic members from the North, as I will proceed to show you.
>
> I do not wonder, Mr. Speaker, that our Southern brethren—our erring Southern brethren—our returned brethren—the men who boast that they are "in their father's house," and have "come to stay"—I do not wonder that they have feeling upon this question. The brave men of the South who at the call of what they believed to be patriotism—mistaken, and horrible though the mistake was—are suffering as our men are suffering, and barred from participation in these bounties by constitutional provision, barred by public sentiment, and yet no constitution, no public sentiment can bar humanity. You may pile constitutions as high as mountains between the vote of an ex-confederate Congressman and a suffering and dying comrade of his own command, and you can not strangle humanity; you can not stifle that feeling of comradeship which is as strong between the men of the South as between the men of the North. I hope it may never die. It ought to live.

Was this intended to help General Stannard's widow, whose pension no one opposed? Was it to help any soldier, soldier's child, or widow to a pension? No; not that. For long years the party associates of the gentleman, and I doubt not the gentleman himself, have been telling the people of the North that the Democratic party was so dominated by Southern men that when it got into power they would prevent payment or granting of pensions. But now comes the gentleman from Ohio and confesses the great wrong his party has done his Southern brethren, "these confederate generals and colonels and majors and captains and Southern statesmen," who he finds vastly more liberal in granting pensions than Northern Democrats. Why this shift of accusation from South to North? Is it because of that feeling of comradeship among Southern men which the gentleman from Ohio hopes may never die he believes to further accuse them of illiberality in granting pensions would lose them no votes? Is it because he believes to so accuse Northern Democrats might cause them to lose some votes? Or are we permitted to believe that the gentleman from Ohio is willing to subordinate the cause of meritorious pensions and give it over to vote-getting?

In the furtherance of his purpose, which can hardly be misunderstood, the gentleman (General GROSVENOR) permitted himself to say:

> To the proposition of certain Democrats to add a revenue measure to each pension bill I put up the answer of the committee on pensions of the Grand Army of the Republic made to Congress this year. It is as follows:
>
> BOSTON, MASS., *July* 1, 1886.
>
> SAMUEL S. BURDETT,
> *Commander-in-chief Grand Army of the Republic:*
>
> The committee on pensions, appointed under resolution of the national encampment of the Grand Army of the Republic, and authorized to speak therefor, feel impelled, through you, in the name and behalf of three hundred and twenty-five thousand veterans, to enter an emphatic protest against the proposition now pending in Congress to attach to all pension bills—and pension bills only—a measure of special taxation to provide for the payment thereof.
>
> This proposition is not to increase the revenues of the Government for general purposes by new taxation, but in effect a declaration that while all other expenditures of the General Government, for salaries, public buildings, river and harbor improvements, and the like, shall continue to be paid from existing sources of revenue, the debt due to the soldiers and sailors of the Republic, for which the most solemn faith of the nation has been plighted, the pensions to the men who gave sight and hearing, limbs and health, and who offered their lives in defense of the nation, shall mercilessly stand aside, unless subjected to the invidious distinction of a special method of taxation.
>
> That every other obligation of the National Government shall be met from the usual and ordinary revenues, but the obligation to the soldier be singled out and alone made to bear the burden of a new and special tax.
>
> That in the payment of pensions, and pensions alone, one class of the people shall be arrayed against another—the tax-payer against the beneficiary—by providing as to pensions, and for no other form of indebtedness, a particular tax for a specified purpose.
>
> Speaking in behalf of our comrades of the Grand Army of the Republic, we protest against this measure as the most iniquitous possible, and which the Union veterans of the country will resent and repudiate.
>
> Respectfully yours,
>
> G. S. MERRILL,
> JAMES TANNER,
> JOHN C. LINEHAN,
> JOHN S. KOUNTZ,
> *Committee on Pensions.*

Mr. Speaker, we here find the gentleman writing down that "certain Democrats" proposed to add a revenue measure to "each pension bill" and indorsing the Grand Army of the Republic committee statement that it was proposed to attach such a measure to "all pension bills," that "the debt due to the soldiers and sailors shall mercilessly stand aside unless subjected to the invidious distinction of a special method of taxation." Now, he could but know that his own statement, as well as the statement of the Grand Army committee, was unfair and unjust, because both were untrue. No one has offered to add a revenue measure to each pension bill, nor proposed that the debt due the soldiers and sailors should mercilessly or otherwise stand aside unless subjected to a special or other method of taxation whatever. It has never been proposed by anybody to pay or to provide for paying the many private pensions annually granted or the debt due to the soldiers and sailors, amounting annually to more than $65,000,000, otherwise than from the ordinary sources of revenue from which all other ordinary expenses and obligations of the Government are paid.

The proposition so misconstrued and misinterpreted imposed no condition upon the payment of any pension granted or to be granted. It laid no tax, made no loan, reached no hoarded surplus. It did provide a means by which the House might or might not, in its discretion, lay a tax, make a loan, or reach an idle and useless surplus to pay pension arrears or other new and largely increased amounts made payable by general pension bills and for the payment of which the ordinary revenues are or may be insufficient. In this measure the Grand Army committee pretend to find that iniquitous purpose which must be looked for among those who inspired the committee's statement.

In the effort to make it appear that his party has done everything and ours nothing for the soldier the gentleman from Ohio declares "there is no truth in the statement" that General Grant vetoed the bounty-equalization bill originated and passed in a Democratic House. He says "there

can not be found in the United States the original or a copy of any veto of that bill ever issued by General Grant." This statement is the merest quibbling evasion. The bounty-equalization bill was passed by the House and by the Senate. It was sent to General (or President) Grant, and did not become a law for want of his approval.

Comparisons are frequently made in discussions by the gentleman from Ohio and others between the relative amounts paid for pensions and for interest on the public or war debt. What relation this comparison has to the granting of pensions is not clear. Nor am I quite sure of its purpose, unless it is made in the belief that the payment of pensions falls largely upon the owners of the bonded debt and other public securities; and generally upon the fortunate owners of capital to whom the burden of payment would be no privation or hardship. Such a belief would be a grievous error. The taxes which were laid upon property, capital, and income during the war for the payment of its cost, including pensions, have all been removed. Now pensions, as well as interest on the public debt and all other money obligations of the Government, are paid by taxes laid on articles in every-day use, and therefore these obligations, including pensions, are paid in unequal proportion by those who are no further removed from want and suffering than are those to whom the pensions are paid.

But, sir, what are the facts and what justice is there in the statement that the majority here has failed to respond to the just demand of the soldiers, their widows or dependent relatives? When the first Democratic House after the war met in 1875 the pension-roll was $29,683,116, and was apparently falling off, for in 1878 it was less than $27,000,000. Since then it has grown with the aid of legislation originating in a Democratic House to $65,747,380 last year and we have appropriated $75,000,000 for this year. In this Congress we have added $4 per month, estimated at $6,000,000 a year, to the pensions of widows who have no votes.

After nearly forty years we have enrolled in the House the Mexican war soldiers at a cost of at least $5,000,000 a year. This pension bill everybody favors, but it never gets through, and neither Northern Democrats nor "these confederate generals and colonels and majors and captains and Southern statesmen" have hedged the way.

Not only in legislation but in administration have the Democrats greatly exceeded their opponents in granting pensions. More than twenty years had elapsed before the appointment of the first Democratic Commissioner of Pensions after the war, General Black. In that time it might reasonably be supposed that all pension claims which were good or could be shown to be good had been allowed by his Republican predecessors, and that only such as were of doubtful propriety or very difficult of proof remained to be considered by him. It fell to him to adjust such claims only as his Republican predecessors would not, or at least did not, allow, or as the claimants in all that time were so doubtful of the justice of such claims they did not present them. In short, it fell to him to adjust claims which were largely of the shadowy kind—shadowy at least so far as the claimants were able to present them. Yet, with such cases coming down to him, General Black in the fiscal year ending with June last, his first full year in office, issued 81,222 pension certificates, which is 6,721 more than was ever issued in any previous year. And this great labor was done with a considerably reduced clerical force, saving in appropriations and reduction in the cost and expenses of the Pension Office, as shown by a statement here submitted.

The work of the Second Auditor's Office is, next to the Pension Bureau, the most important branch of the public service to those who served the country in the late war.

The Second Auditor, Mr. Day, and the force in his office settle the claims of soldiers, their widows and orphans, for arrearages, back pay, and bounty.

He came into office twenty years after the war, during which time his Republican predecessors with all the clerical force demanded had been adjusting these claims. Such as were easily adjusted and could be established without painstaking and great labor were no doubt settled; only those most difficult and hard to establish came down to him to settle; and yet left to the consideration of such claims only as his predecessors had not in twenty or more years been able to adjust, at least did not settle and pay, this faithful and effective officer settled in his first year more than three thousand claims in excess of those allowed by his predecessor in the previous year. His allowances were half as much more than the previous year. The accounts audited, vouchers handled, and all the business of his office increased in like proportion in the interest and for the benefit of soldiers living or widows and children of soldiers dead, and all this has been accomplished with a less average number of clerks and a considerable decrease of expenditure.

Mr. Day and his work in behalf of those whose claims come down to us from their war services has commanded the unstinted approval of the gentleman from Ohio [Mr. BUTTERWORTH], who, in his speech on one of the appropriation bills, said:

> Mr. Day, the Second Auditor, is an energetic, conscientious, clear-headed man. Nobody can go about his office without appreciating the fact that the President was fortunate in choosing such a man for Second Auditor. He is crowding the business of his office.

In conclusion, I repeat that very much of what is said here and elsewhere on the subject of pensions is not intended for the single purpose of securing relief for those entitled to the gratitude and beneficent aid of the Government, but is said for partisan purposes and in terms and statements unfair and unjust because untrue.

APPENDIX A.

PENSION OFFICE STATEMENT.

Statement showing the amount of appropriations and the actual expenditures during the year 1886.

	Appropriated.	Expended.	Balance.
Salaries of clerks	$1,954,650 00	$1,789,774 05	$164,875 95
Salaries of special examiners	210,000 00	165,045 75	44,954 25
Per diem and expenses of detailed clerks	360,000 00	307,508 70	52,491 30
Per diem and expenses of special examiners	220,000 00	176,359 36	43,640 64
Total	2,744,650 00	2,438,687 86	305,962 14

Of the balance ($305,962.14) $71,190 represents the amount saved by operation of law and $234,772.14 by economy of office.

The records of the bureau further show a saving in the matter of stationery, printing, and binding during the year of $13,683.55.

This immense work has been performed with a force of clerks less by over one hundred than for the years previous.*

The number of names added to the rolls was 43,166. For comparison see page 21 of Commissioner's report, 1885.†

During the fiscal year ending June 30, 1885, there was paid out for pensions, including arrears, the sum of $65,733,094.27.†

During the fiscal year ending June 30, 1886, the Pension Office issued 81,422 pension certificates, a larger number by 6,721 than were ever issued in any previous year. In the month of June the number of pension certificates issued was 10,375.‡

For comparative statement of amounts expended, year by year, from 1873 to 1886, inclusive, with average clerical force, see below:

Statement showing the average clerical force, year by year, and the amount of money expended on account of pensions.

Year.	Disbursements on account of pensions.	Clerical force.
1873	$29,185,289 62	341
1874	30,593,749 56	324
1875	29,683,116 63	330
1876	38,351,599 69	353
1877	28,580,157 04	334
1878	26,844,415 18	335
1879	33,780,526 19	375
1880	57,240,540 14	375
1881	50,626,538 51	367
1882	54,296,280 54	759
1883	60,431,972 85	1,545
1884	57,273,536 74	1,547
1885	65,733,094 27	1,631
1886	65,747,380 00	1,519

APPENDIX B.

STATEMENT OF ARREARS, BOUNTY, ETC.

In the Second Auditor's Office during the twelve months ending June 30, 1886, the average number of clerks employed was ten less than in the previous fiscal year, and there was a decrease of more than $20,000 in the expenses.

In the matter of claims for arrears of pay and bounty there was an increase of 3,314 in the number settled and of $247,652.78 in the amount allowed, the total amount certified in 1885 being $540,064.52, and in 1886 $787,717.30.

The record of money accounts audited shows an increase of 632 in number and $9,285,000 in amount, and 425 more property accounts were examined and disposed of in 1886 than in 1885.

The correspondence of the office shows a large increase, 64,375 letters received and registered against 44,682 in 1885, an increase of 19,693, and 220,130 letters written against 200,362 in 1885, an increase of 19,768.

The other principal items of increase are:

Vouchers handled by file clerks in 1886	1,394,289
Vouchers handled by file clerks in 1885	1,209,788
Increase	184,501
Pay-rolls and other vouchers repaired in 1886	23,571
Pay-rolls and other vouchers repaired in 1885	14,761
Increase	8,810

* The following is a statement of the clerks borne upon the rolls at the periods named:

June 30, 1884	1,552
March 16, 1885	1,665
June 30, 1885	1,540
June 30, 1886	1,536

† Of which 2,314 were restorations.

‡ From March 17 to June 30, 1885, the Pension Office was under the administration of the present Commissioner, and during said period 31,294 pension certificates were issued, of which 15,906, or 51 per cent., were originals, making a total issue from March 17, 1885, to June 30, 1886, inclusive, of 112,626, and a total addition to the rolls of 56,756 new names. The amount paid out for pensions during the period from March 17, 1885, to June 30, 1885, was $23,643,851.77; to June 30, 1886, $65,747,380; making a total of $89,391,231.77.

Pages of defaced and mutilated pay-rolls copied and verified in 1886	1,274
Pages of defaced and mutilated pay-rolls copied and verified in 1885	128
Increase	1,146
Pages of accounts, &c., journalized in 1886	3,068
Pages of accounts, &c., journalized in 1885	1,997
Increase	1,071
Certificates of non-indebtedness issued to claimants in 1886	5,602
Certificates of non-indebtedness issued to claimants in 1885	4,022
Increase	1,580
Requests for information received from the Pension Office, Third Auditor's Office, Adjutant-General's Office, and other bureaus in 1886	18,138
Requests for information received from the Pension Office, Third Auditor's Office, Adjutant-General's Office, and other bureaus in 1885	14,425
Increase	3,713
Requests as above answered in 1886	17,212
Requests as above answered in 1885	13,716
Increase	3,496

Republican Management of the Navy.

SPEECH

OF

HON. HILARY A. HERBERT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 5, 1886.

On the subject of appropriations for the Navy and the bill to increase the efficiency thereof.

Mr. HERBERT said:

Mr. SPEAKER: Republican and Democratic methods are nowhere so aptly illustrated as by the history of our Navy read in the light of the figures made in the last twenty years. Other comparisons are apt to deceive. Our population has nearly doubled, our wealth has more than doubled, business and the expense of carrying it on in every department of the Government has increased, our pension-roll has grown to $76,000,000 per annum, river and harbor bills carry $14,000,000 annually, and so the aggregate sum necessary to carry on the Government has necessarily increased. But there is one department or arm of the Government that has not grown with the growth of the country, and that is the Navy. Its *personnel* has remained nearly the same.

Let us look at that, comparing two decades. Over the expenditures for the Navy from 1867 to 1876, inclusive, the Republicans had absolute control. Not only had they the executive department which expended the money, but they controlled every Congress during that era. It was the Forty-third—a Republican—Congress which appropriated for 1876. Up to that time the Democratic party was so weak as not even to be a check upon Republican extravagance. But in 1874 the Democrats came into power in the House. Their consent was necessary to the appropriations for the year 1877, and we have had a Democratic House in every Congress since except the Forty-seventh. Let us now compare the two decades:

Year.	Expenditures on account of the Navy.	Year.	Expenditures on account of the Navy.
1867	$31,034,011 04	1877	$14,939,905 36
1868	25,775,802 72	1878	17,395,201 37
1869	20,000,737 97	1879	15,125,126 84
1870	21,780,229 87	1880	13,526,984 74
1871	19,431,027 21	1881	15,063,671 60
1872	21,249,809 00	1882	15,032,046 26
1873	23,526,256 70	1883	15,263,437 17
1874	30,932,587 42	1884	17,292,601 44
1875	21,497,626 27	1885	16,021,079 07
1876	18,963,309 82	1886	15,029,704 95
Total	234,191,119 10	Total	155,819,889 46

The difference in the expenditures during the two decades is $78,871,229.54, enough to build and equip a respectable modern navy.

But, Mr. Speaker, it may be said that this statement is unfair, because in 1867 and 1868 the Navy had not been fully reduced to a peace footing. That is true. In 1867 and 1868 the estimates were for fifteen thousand men.

But the act of June 17, 1868, reduced the number of men to 8,500. It remained at this figure until June, 1876. Then it was reduced to 7,500 men. By the act of May 12, 1879, 750 boys were added, and the number allowed has since remained at 8,250 men and boys. So the difference in the number of sailors to be paid from 1869 onward is so slight that the difference in the expenditures can not be explained by attributing it to this. To make it absolutely clear that the difference results not from the amounts paid to men, or to men and officers, and to exclude every other conclusion except that it resulted from extravagant methods, I will leave out of the calculation the two years 1867 and 1868, and we have the total expenditures for the Navy during eight years, when Democratic influence was not felt in the councils of the Government $177,381,605.34 against $155,319,889.46 expended within ten years after the Democratic party began its policy of reform.

The average annual expenditures during eight years of complete Republican ascendency, from 1869 to 1876 inclusive, was $22,172,625.64, and during the ten years which followed, from 1877 to 1886 inclusive, was $15,531,988.94. In other words, there was a saving in the expenditures of the Navy during each year after the Democrats came into power in the House and exercised partial control over appropriations, averaging $6,640,636.70, thus making a saving during ten years of $66,406,367, enough money to build and equip a respectable modern navy.

To make it still more clear that but very little of this great sum saved could have come from the pay of officers and men, I have had tables prepared showing the amounts actually paid out for this purpose during all these years. Thus it is shown that the average amount annually paid to officers and men of the Navy and to marines during the eight years of complete Republican control was only $380,664.12 annually more than was paid for the same purpose during the ten-year period. Deducting this sum from $6,640,636.70, the annual saving as above, and the amount saved annually remains $6,259,971.58.

The exact figures showing the amounts paid out are as follows:

EIGHT YEARS.

Year.	Pay of the Navy.	Pay of Marine Corps.
1869	$8,525,992 84	$732,562 43
1870	7,854,330 53	674,296 96
1871	7,093,732 00	807,579 03
1872	7,213,133 75	700,000 00
1873	7,093,929 00	678,145 00
1874	7,549,855 94	747,639 00
1875	7,248,996 83	599,279 99
1876	7,077,943 00	598,845 15
Totals	59,667,873 96	5,538,347 56
Yearly average	7,452,234 24	692,043 44

TEN YEARS.

1877	$7,021,758 45	$623,120 30
1878	7,215,082 36	606,917 06
Deficiency 1877	2,574,233 81	
1879	6,868,275 00	614,815 00
1880	6,351,892 21	559,673 35
1881	6,903,581 35	585,610 64
1882	6,771,135 24	590,550 56
1883	6,902,777 87	636,413 18
1884	6,765,523 67	613,777 28
1885	7,249,589 41	602,994 72
1886	6,952,264 28	626,147 94
Totals	71,576,113 65	6,020,020 03
Yearly average	7,157,611 36	606,002 00

This in ten years would amount to more than sixty-two and one-half millions of dollars, enough still to build and equip a respectable modern navy. Where, then, was this extravagance? I have shown it was not money paid out to officers or men in the service. It was perhaps everywhere, in all the branches of the service, but especially in the Bureaus of Construction and Repair and Steam-Engineering.

In the eight years of complete Republican control, eight years during which the Navy was on a peace footing, the total expenditure of the Bureau of Construction and Repair was $30,811,257.67 and of the Bureau of Steam-Engineering $12,776,394.68.

During the ten years after the Democrats came into power in the House the Bureau of Construction and Repair spent $14,316,265.14, and the Bureau of Steam-Engineering $9,785,075.81. I leave out of the calculation all special appropriations made for increase of the Navy during both periods. The tables presented do not, therefore, include the eight steam-vessels ordered in 1873 and built in 1874 of wood, and which have rotted and become worthless, while other nations were build-

ing of iron and steel. As will be seen, all the expenditures for increase of the Navy during both periods are accounted for separately, as I am dealing now only with ordinary expenditures. It will be seen that the average annual expenditure of the Bureau of Construction and Repair under full Republican control was $3,851,407.20. After the Democracy got control of the House the annual expenditure for the same purpose was $1,431,626.51. So the average expenditures by the Bureau of Steam-Engineering during eight years of undisputed Republican control were $1,597,049.33. After the Democracy got control of the House the expenditures by the same bureau were only $978,507.58. The table showing the expenditures in full is as follows:

Year.	Bureau of Construction and Repair.	Bureau of Steam-Engineering.
1869	$4,932,604 55	$1,981,605 19
1870	4,267,898 10	1,085,439 23
1871	4,829,999 80	1,000,000 00
1872	3,489,423 49	1,160,000 00
1873	3,300,000 00	1,650,000 00
1874	a3,499,994 00	2,299,784 00
1875	3,297,708 97	1,799,946 64
1876	3,293,818 76	1,799,619 62
Totals	30,811,257 67	12,776,394 68
Yearly average	3,851,407 20	1,597,049 00
1877	1,750,000 00	942,500 00
1878	1,744,204 29	941,809 42
1879	1,499,515 78	799,744 21
1880	1,485,996 26	1,052,058 93
1881	1,490,117 08	798,740 90
1882	1,298,908 49	1,005,607 02
1883	b1,709,837 39	1,598,352 74
1884	c1,356,139 85	c1,068,551 84
1885	d992,778 08	f894,755 16
1886	988,767 92	682,955 59
Totals	14,316,265 14	9,785,075 81
Yearly average	1,431,626 51	978,507 58

a Construction of steam-vessels, $3,200,000.
b Double-turreted monitors, $395,423.26; c steel cruisers, act of March 3, 1883, $1,300,000.00; d steel cruisers, act of July 7, 1884, $972,209.77—total, $2,667,633.03.
e Machinery for double-turreted monitors, $861,163.63; f steel cruisers' machinery, $626,866.89—total, $1,488,030.52.

I have taken these two bureaus as a sample of Republican maladministration. No illustration could be more apt, for all the world knows that, notwithstanding these extravagant appropriations, the Navy has gradually dwindled into such insignificance that we are unable now to cope with any modern fleet.

Take other bureaus, and we find under Republican control similar extravagance. The Committee on Naval Affairs during the present Congress ascertained that the Bureau of Equipment has on hand, in the language of Commodore Schley, enough canvas "to furnish two suits of sails and a foretop-sail to the whole British navy." Some of this canvas was bought thirteen years ago and now is worthless. The same bureau has on hand spectacle-clews for sails by the ton, and valued at $18,744, enough to last the Government for eighteen years to come.

Then there is the Bureau of Provisions and Clothing. Many of the purchases for this bureau can not be accounted for on any hypothesis consistent with honest and fair dealing. Estimated according to the sales made to sailors last year, there is now on hand a supply of pea-jackets for twenty years, monkey-jackets for five and one-half years, black-cloth trousers for four and one-half years, satinet for three and one-half years, canvas duck for twelve years, caps for four and one-half years, mattress covers for twenty years, and boots for twenty years; but in truth and fact much of this clothing has been on hand so long and has become so worthless that sailors refuse to buy it.

The extravagant policy, long acquiesced in, of keeping in store large supplies of clothing brings loss in two directions, first, from sales of condemned clothing, next from the necessary reductions in price which the Government is compelled to make in order to keep pace with a falling market.

The losses in ten years last past have been—

From sales of condemned clothing	$272,000
From reduction in price	438,000
Total	710,000

The fund on hand, subject to the orders of this Bureau of Provisions and Clothing, was extravagantly large. It seemed to be a standing temptation to fraud. So the present Congress took away and returned into the Treasury $325,000 of this fund. We also provided for the return to the Treasury of the surplus balances on hand to the credit of pay of the Navy and pay of the Marine Corps. At the close of the last fiscal year these sums were, respectively, $576,380.24 and $217,694.24. Thus we have returned to the Treasury of moneys unnecessarily appropriated over a million dollars and provided against a future similar accumulation.

I will not dwell longer on past expenditures, but will close by making brief reference to the appropriations for the Navy at this session of Congress. The total sum included in the annual appropriation for the naval service for the fiscal year ending June 30, 1887, is $12,989,907.20. Subtracting the amount included in the bill for completing and arming certain new vessels ($186,898), we have the sum of $12,801,009.20. This is less than the appropriation for last year, excluding from that also all appropriations toward a new navy, by the sum of $333,695.75; and it is less by $6,162,300.62 than the sum, $18,963,309.82, which was expended during the last year of eight-year period of full Republican control, of which I have given the tables.

This Congress has appropriated toward increasing our Navy, including the $186,898 I have already mentioned, the sum of $3,686,898. Adding that to the amount in the regular bill for the naval service, we have for 1886 the sum of $16,489,907.20 appropriated for all the purposes of the Navy.

Ten years ago annual appropriations made by the Republicans, when undisturbed by Democratic ideas of economy, for the naval service alone amounted to $2,273,402.62 more than this aggregate. In other words, the Republicans spent in 1876 on the naval service alone, not contributing one dollar to increase the Navy, $18,963,309.82. Now, under Cleveland, we support the Navy, contribute more than three and a half millions to build a new navy, and still save over two and one-quarter millions upon Republican expenditures of ten years ago.

These figures, I think, show that Democrats can and will, if permitted, build up our Navy on a less sum than Republicans expended when they allowed it to rot.

Interstate Commerce.

SPEECH

OF

HON. WILLIAM P. HEPBURN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886.

The House having under consideration the bill (S. 1532) to regulate commerce—

Mr. HEPBURN said:

Mr. SPEAKER: It is not my purpose to attempt any very extended comparison of the respective merits of these two bills. I wish to urge upon the House such action as will result in some legislation on this question of interstate commerce. It is a question of primary importance. None other within my knowledge is regarded of more importance, at least in the section of country where I reside than that of wisely and justly controlling the railroad corporations. I want to secure some legislation on this subject. I want to secure at least a start in that direction. I am thoroughly satisfied that if the recommendation of the Committee on Commerce of this House be adopted there will be no legislation whatever on this question. They have to-day given us, substantially, the same proposition which they have been urging upon the House year after year; and so far as my knowledge goes, it has never received in the other branch of Congress more than 11 affirmative votes. It is, with slight changes, the Reagan bill of past sessions. It has been repudiated in the Senate upon every occasion when it has been presented; and I do not believe that any of its friends of the House Committee on Commerce have the slightest hope of securing favorable action upon it in that body.

The Cullom bill, for which our Committee on Commerce propose to substistute the Reagan bill, while it is not all that we desire, is certainly a step, and a long step, in the right direction. It will at least secure reasonable charges by the railroad companies and do away with very many evils. I admit that provisions looking to the same end are to be found in the Reagan bill, but the differences in the methods of enforcing the remedies are great. The bill of the House committee simply commends the aggrieved individual to litigation—litigation in the courts, in which all the odds of wealth, experience, and knowledge of the subject-matter involved are against him. Against these odds of wealth, experience, and knowledge he must fight his battle, alone and unaided.

I take it that no legislation is necessary to declare that extortion and overcharges shall not be permitted. Under the common law to-day, a person who suffers by extortion may bring his action in the courts and recover if he can make his proofs.

But the difficulty with him under the Reagan bill is to establish his cause of action. He has the affirmative of the issue, and the burden is upon him to show that a given rate—the one exacted from him—is excessive or extortionate. Under the other bill this is not true. He has a friend at court. It becomes under the Cullom bill the duty of the commission—skilled men, experts on the subject of transportation—to investigate for him and ascertain the very facts, to furnish the very

proofs of all that he may need. They have the broadest range, the amplest facilities, to procure the necessary information. They may resort to and examine all sources of information, and the expenses are paid by the Government. The bill provides that the commission shall have all of these ample opportunities for investigation, and they are required under the law to make their findings of fact; and these findings in the subsequent litigation that may occur are to stand as true *prima facie*. These findings make out the complainant's case for him, shifting the burden of the proof from the weak, where it can not be made, onto the strong. That is on the supposition that the complainant is in the right.

Why, gentlemen, I regard this as a boon of inestimable value in equalizing the possibilities that may result from litigation. To-day if a suitor goes into court and attempts to establish an affirmative proposition against a railroad carrier he finds that the experts, the men who have the information upon the subject, are all of them upon the other side of the question, all of them hostile to his purpose. The great difficulty in the way of the overcharged shipper lies here: Suppose my friend from Nebraska is called as a witness to substantiate the proposition that a given rate is extortionate. He perhaps has much more information than the average suitor on subjects of this kind. He says the given rate in inquiry is extortionate. "How do you know?" is the question submitted upon cross-examination—I am trying to look at this and discuss it as a practical question, as something every man will have to meet under the terms of the Reagan bill—"how do you know that this is extortionate?" Perhaps the very best reason that he could give would be to suggest a comparison between the rate charged and another rate charged by some other corporation.

Well, sir, the attorney would suggest, "What are your means of information? What is your knowledge as to the conditions in the two cases? What do you know of the elements of cost that enter into the thing we call transportation, forty or fifty or sixty distinct elements of cost—the grades here and there, the cost of construction of that road, the cost of this; how much of the time of that is impeded by snows or storms as compared with this; the amount of traffic of the two roads, the cost of fuel?" And so he would go through the whole list of factors that aid in making the total of expense in moving freights.

The gentleman would undoubtedly be compelled to say, unless his information is more ample and his knowledge much greater than that of the average citizen, that he was unable to answer these questions. His evidence would have absolutely no weight, because not based on knowledge of the subject-matter, and the suit would fail. Hence it is a mere mockery to a man to say he shall have his right of action; it is a mere mockery to say that the railroad corporations shall not impose upon him when you give him no means to make good his assertion that they have imposed upon him. It is not enough to give him a right of action. If you intend to give him anything of value give him such a remedy as will enable him to assert and maintain his rights in the courts, if the corporation that has wronged him will not obey the findings and order of the commission and compel him to go to the courts for relief.

[Here the hammer fell.]

Mr. O'NEILL, of Pennsylvania. I yield to the gentleman the remainder of my time.

Mr. HEPBURN. The Cullom bill gives the facilities and furnishes the aids. Now, gentlemen, we can secure the advantages which are demanded if we refuse to vote for the adoption of the amendment and let the question come before the House as to whether we will have legislation upon this vital question, or whether, through an adherence to the report of the Committee on Commerce, we will suspend action between the two Houses and remain in precisely the same condition we have been in for all time past.

If it were not for the known and well-known opinions and integrity of the gentlemen who are urging the adoption of the Reagan bill, we might almost suspect that they were the men who wanted no action at all; that they are pursuing a course they know will leave the corporations of the country absolutely untrammeled, and furnish the people no relief whatever.

Mr. REAGAN. I desire to ask the gentleman a question. I wish to ask the gentleman from Iowa how he gets the information that the Senate is so firmly fixed in its opinion that there is no compromise possible?

Mr. HEPBURN. I judge from the action of the Senate heretofore. The bill of the gentleman was before the Senate at the last session. It received merely 11 votes and no more. The gentleman knows the facts as well as I. The Cullom bill passed the Senate by a vote of 42 to 2, I believe.

Mr. REAGAN. I do not know that.

Mr. HEPBURN. Then the gentleman is not so familiar with the subject as I had supposed.

Mr. REAGAN. The gentleman is not authorized to speak for the Senate, or say that it will not agree to a compromise.

Mr. HEPBURN. I am only speaking from sources which are open to the gentleman in common with myself.

Mr. O'NEILL, of Pennsylvania. I gave the balance of my time to the gentleman from Iowa.

The SPEAKER. The gentleman's time had expired.

Mr. O'NEILL, of Pennsylvania. I think not, Mr. Speaker, until 5 o'clock.

The SPEAKER. But the gentleman had occupied an hour. The Chair was not aware of the fact that he had more time than that.

Mr. McMILLIN. Mr. Speaker, having been in the chair at the time, I will state that the gentleman's hour expired at five minutes before 5 o'clock, but he was entitled to an hour and five minutes, as the Chair understood.

The SPEAKER. Then the gentleman from Iowa will proceed until 5 o'clock.

Mr. HEPBURN. I will reserve the remaining five minutes until the evening session.

* * * * * * *

Mr. HEPBURN. Mr. Speaker, I sympathize with the gentleman from Virginia [Mr. O'FERRALL] in his very laudable desire to place new laurels upon the brow of the gentleman from Texas [Mr. REAGAN], and to enhance so far as he may the value of the distinguished service which that gentleman has rendered to this Government. I sympathize with him, too, in the hope he has expressed as to the results the great Democratic party is to accomplish in its new mission and with its new lease of power. Yet I am constrained to express the fear, judging from what we have up to this time witnessed, that all of his blissful anticipations as to the performances of that organization are not to be realized. I believe that up to this time he could count on the fingers of his right hand, even if he had lost four-fifths of his fingers [laughter], all that that party in a year and a half has accomplished in the direction of performance of the extraordinary promises that it made before it obtained its present lease of power.

I would have been glad if the gentleman, instead of giving us the essay, estimable as it is, upon the general subject of transportation and the glories of the Democratic party, which he has just delivered, had met the requirements of the majority of his committee in view of the legislation they propose. There came to this House and was referred to his committee a proposition under and by which it was believed that control of the railroads would be possible. That proposition had received the attention and careful consideration of the other branch of the national Legislature for many months. It was the result of a carefully considered examination of this vexed subject. The Senate Commerce Committee, which framed it, had called many witnesses, had carefully examined them, was familiar with the views of all the railroad experts of the country upon this great question. The committee of the Senate appointed at a previous session had visited all parts of the United States; had invited all classes of persons interested in transportation to appear before it and express their views, to state their grievances, and to suggest remedies.

Shippers and carriers, boards of trade, and chambers of commerce in great numbers and in all parts of the country—East, West, North, and South—had availed themselves of this opportunity, and the committee had in this way collected a vast fund of valuable information bearing upon the subject, which as a public document has been published in two large volumes, and is a valuable contribution to the fund of information on the carrying trade of the country; and, as a result of all its investigations and all its efforts, had crystallized certain provisions into a proposed law passed by the Senate and sent to the House. The Committee of Commerce of the House, of which the gentleman is a member, now proposes at once to wipe out all that has been done in this direction, to do away with it instanter, and to give us something radically different in its place. It seems to me that it would have been wise for the gentleman who proposes this substitute for the Senate bill, wise for all the gentlemen upon the majority side of that committee, to have given some reason why it is better that we should not now, on this very day, secure legislation that so many of us want, by adopting the bill of the Senate. That ends the matter. That gives the people immediate relief. The passage of the substitute gives us nothing but a disagreement between the two Houses—no legislation.

Mr. O'FERRALL. Will the gentleman allow me to ask him a question?

Mr. HEPBURN. Yes, sir.

Mr. O'FERRALL. Are we legislating here for the people or for the Senate?

Mr. HEPBURN. We are legislating here for the people, but we can not legislate for the people without the aid of the Senate. It requires the concurrence of the two Houses in the same bill to enact law. The gentleman has seen fit to tell us of some of the propositions contained in the substitute he advocates, yet he has failed to tell us that every provision that he has alluded to is contained in the original Senate bill for which he proposes to substitute another—every one of them, save one; and I think I can show before I get through that the remark applies in a degree to every one of them.

My friend calls my attention to the pooling. I want to call the attention of the gentleman who may conclude this debate to this marked fact—that pooling is not prohibited in the substitute; it is only the money pool that is prohibited. Pooling can go on just as it exists to-day so far as combination is concerned, so far as private arrangement is concerned. All that the bill proposes is to prohibit the money pool,

and to say that after the combination has been made the members of that combination shall not divide the profits which may result from it.

The gentleman has called attention to the fact that the bill which he advocates provides that no discrimination in rates shall occur. Has he not found in the Senate bill, which he undertakes to ignore, precisely the same provision? The Cullom bill, the Senate bill, prohibits all discriminations.

The gentleman says that in his measure there is a provision, which he extols as though it were a new discovery, requiring all rates to be reasonable. But a similar requirement is in the other bill. All rates shall be reasonable in the language of the Senate bill.

Further, he says that all shall have the same facilities, the rich and the poor; that there shall be no classes; that here it shall not be held that one class or one locality shall have, either in the facilities for shipment or in rates, an advantage which is denied to another. The same provision is to be found in the bill of the Senate.

"Shipments shall be continuous." That is simply copied from the Senate bill, in which everything relating to the continuousness of shipments found in the substitute is to be found in the original.

Mr. REAGAN. In that respect the Senate bill is copied from the House bill.

Mr. HEPBURN. "No pooling of earnings," says the gentleman from Virginia. I have already spoken of that.

"There shall be no rebate, no drawback, and no undue advantage," says the gentleman. But he will find precisely the same provision in the bill which he so seriously contemns.

"Schedules shall be published and schedules shall be permanent." There is the same provision in the Senate bill. If there is any difference, the difference in my humble judgment is in favor of the bill which the gentleman does not esteem.

"There shall be no greater charge for a shorter haul than for a longer one." This has been at all times the especial pet measure of the gentleman who drafted this bill. No matter what other changes he has made during the eleven years that he has been unsuccessfully advocating his measure he has clung tenaciously, with the utmost of affection, to this particular provision. Does not the gentleman find that provision word for word in the Senate bill? The author of this substitute lives near the seaboard. There might be an advantage secured by his constituents by the adoption of this provision, but it would be procured at the expense of those who live at a great distance from the seaports.

But the Senate bill contains this with another wise provision. It is known, Mr. Speaker—I think no one will deny it—that the fourth section of the substitute would operate most harmfully against large classes of shippers.

There are localities, notably the city of Chicago, where because of an extraordinary west-bound traffic a large number of cars every week would have to pass back empty, increasing the cost of all the traffic on the seven great trunk line roads, if the carriers were not permitted to fill those cars at rates to meet the competition of the water route, by the extraordinarily low charges which shippers from that point get. Twenty-two thousand tons was the amount of east-bound rail freight from the city of Chicago, which by reason of these low rates was able to compete with the water route from Chicago to New York the week before last—22,000 tons—more than a thousand car-loads, and the shipments by rail have in some months reached the enormous proportions of 235,000 tons in a single month. Now, suppose the provisions of the Reagan bill should become the law of the land, suppose a company could charge no less rate from its western terminus than from intermediate points, what would be the result? The gentleman would assume, and would argue, that necessarily the rates to intermediate points would be lowered to correspond with the low rate from Chicago. But that would not be the case.

The companies must necessarily raise the terminal rate—the Chicago rate—and lose all of that traffic. They would lose it because the increased rate would be greater than the water rate. As it is to-day, it may not pay the actual cost of transportation; but it pays something more than the cost of hauling the cars that would be hauled back empty but for it; in many instances it barely pays for carrying back the empty cars. But that is an advantage to the intermediate shipper. There is a certain sum which must be raised by the carrier, the sum that will cover the fixed charges upon the road and that will pay the operating expenses. Shippers have to pay for this. If no portion of this can be earned from the terminal station it is absolutely necessary that the intermediate station shall pay it. All classes are benefited by a provision which allows the carrier to charge this less rate in instances of this character. By the Reagan bill the carrier is not permitted to do this. By the Senate bill, while it contains precisely the same provision as the Reagan bill, the commission is permitted in cases of this kind to suspend the operation of the fourth section and give to the Western shipper the benefit of the low rate given by the roads that are brought in competition with water rates.

"Ah," says the gentleman, "you are opening the door to all kinds of fraud and all kinds of black-mail." Mr. Speaker, is it not possible for the present Executive of the United States to find within all the borders of the land among the 12,000,000 of voters of this country five men who can and will honestly administer this law? It seems to me that those gentlemen who say "no" are disposed to put a stigma upon their species which I at least am not willing to indorse. I am fully persuaded that the present Executive, that any President we have ever had, could and would select from the citizens of this land five men who could and would faithfully and honestly administer this law, and in cases where they were satisfied it was necessary to suspend the operation of this section, could safely be permitted to use their power to suspend it and give to localities situated as is the city of Chicago (which I use for example), and the people farther away from the seaboard, to which all of their products are ultimately sent, the right to secure these lower rates that now come from the competition with the water routes.

The gentleman tells us further that "all prohibited acts are declared to be unlawful and made criminal." Why, sir, that is a provision of the other bill. So it is with the next suggestion which he makes, that where recoveries are had under the bill which he advocates the attorney's fee shall be charged among the costs. That is one of the provisions of the Senate bill. He further urges that books are required to be produced and officers and employés required to testify. That is also a provision of the other bill. "Persons doing prohibited acts are guilty of misdemeanor." That is also a provision of the other bill. But the penalties under the Senate bill are more rigorous than under the bill which the gentleman advocates.

Thus, Mr. Chairman, all the provisions which the gentleman so earnestly extols in the substitute he advocates are to be found among the provisions of the bill which he declares to be utterly worthless, which he condemns and contemns with all the severity of denunciation and rhetoric.

But, Mr. Speaker, there are some provisions of great importance in my judgment to be found in the original bill which are not to be found in the substitute.

The gentleman went through with the entire schedule of virtues to be found in his bill. He did not advert to any of those provisions, which are remedial in their nature and wonderfully beneficial to be found in the Senate bill that are not in the Reagan bill.

Under the provisions of the Senate bill the circuit courts of the country are always to be open for the hearing of cases growing out of this statute. Under the provisions of that bill the equity side of the court is appealed to, the cumbersome system of equity pleading is abandoned, and the fact statement, the informal pleading, is the system adopted.

Again, cases arising under the Senate bill are to be heard *instanter*. There are to be none of the law's delays. Again, under the provisions of the bill which the gentleman prefers the suitor has no new remedy whatever. He must appeal to the courts, as he does in any other litigation.

The gentleman is not willing to trust to a commission. There is not virtue among all our citizenship to meet the emergency of furnishing relief under a commission system. But he is compelled under his own bill to resort to the aid of some class of men. He must rely on human agency after all.

Courts can be corrupt, the gentleman need not be reminded, as well as commissioners; and here to possibly a corrupt court—there are few of them, but there may be some under the gentleman's bill—the suitor is remanded. He is remanded to it without any aid from any law other than that to-day possessed by all suitors. He stands there alone, weak and poor and ignorant though he may be, with a ten-dollar case or a one-hundred-dollar case. He must make his own case against a wealthy corporation. He must do that, too, without technical knowledge of the matters litigated. He has no witnesses who are better informed than himself. The witnesses which must establish his case are the experts that belong to the other side of the question. The employés of the carrier are the only experts he can secure.

Under the Senate bill the law mercifully provides him with his witnesses. That gives to him where he makes his complaint the aid of the commission. It becomes their duty at once to investigate. They may send for persons and for papers. They may resort to the books of the corporation. They can compel the attendance of the employés as experts, and the members of the commission will soon be experts themselves; and from the mass of testimony they make up a finding which becomes in the future litigation one of the records of the court and stands there *prima facie* as true, throwing the burden of proof upon the corporation.

The gentleman proposes in his love for the poor man, in his desire to secure him redress, to take that from him, and to leave him without assistance save that which nature has given to him.

The SPEAKER *pro tempore*. The gentleman's time has expired.

Mr. DUNHAM. I will yield the gentleman five minutes of my time.

Mr. HEPBURN. Mr. Speaker, I have five minutes of my own time coming over from the afternoon session.

The SPEAKER *pro tempore*. The gentleman will proceed.

Mr. HEPBURN. Under the bill, which the gentleman seems to think is entirely without fault, there is no provision investing these courts with the power to punish disobedience as contempt.

Under the procedure authorized by the Senate bill that corporation found to be in the wrong may be compelled by the order of the court

to extend redress, but if there is failure, then the strong arm of the law, the whole power of the Government, compels obedience to the mandate of the court.

Under the provisions of the substitute it is a strong corporation against a weak suitor. In the other it is the majesty of the Government against a creature which it has created.

Mr. Speaker, it has been suggested that a commission of five would be entirely inadequate to transact the immense business that would come before it. Suppose this is true—I do not believe it would be found to be true—but should it be, the shipper would have, without the aid of the commission, all of the remedies, under the Senate bill, that he could have under the substitute. The man aggrieved is not compelled to resort to the commission. He may proceed at once to invoke the aid of the courts. He may bring his suit precisely as he must do under the substitute. All of the aids given him by the commission are in addition to those of the substitute, and in addition to the court remedies also provided for by the Senate bill.

But there is another marked difference between the remedies provided for by the two bills. All actions under the Reagan bill are private actions, and bind only the parties to the suit. The suit of A against a carrier affects in its results only the parties. Suppose that at a given point a carrier pursues a course that harms all the shippers at that point, to protect themselves each one must resort to litigation. This is not the case under the Senate bill. Under its provisions the commission would investigate the grievance and make its order, which would be general and apply to all cases, which, if not promptly obeyed, would impose upon it the duty of procuring the writ of injunction or mandamus of the proper court, compelling the righting of many wrongs at once. The Reagan bill operates upon individual cases; the Senate bill operates upon groups of cases. Under the latter many cases are disposed of at once that under the other would be separated into many actions. The Senate bill is the measure for the people; the Reagan bill is the measure for the lawyers, whose interest it would be to fill the dockets of the courts and multiply indefinitely the litigation of the country.

Another marked difference between these measures is this: The Reagan bill does not pretend to give any relief or remedy against extortionate passenger charges. The Cullom bill includes them within its ample provisions. Just why the gentleman from Texas should ignore complaints of this kind I do not know. Fortunately the Senate bill is not silent on the subject. And as these passenger charges constitute nearly one-fourth of the earnings of the carriers, and as they are often extravagantly high, it seems to me the subject was one worthy of the attention of the House Committee on Commerce, and worthy of our earnest consideration.

The gentleman is anxious for legislation. I have no doubt that is true, but if he is, I beseech him to abandon the substitute he now favors and aid us in securing this Senate bill. It is practical, and it is possible we can secure the redress we need simply by the abandonment of his favorite idea of "crowning the gentleman from Texas with new laurels and showering new honors upon his worthy head" and voting for the bill that has already passed one House and needs only our sanction to become law. If we will agree to the Senate bill we can have this needed legislation before the end of this week. I urge gentlemen to enable us now to accomplish this great good.

If he will simply abandon his bill that has never received favor in the Senate and devote himself to those measures that are attainable, practical, we can have before the week closes an enactment which, if it is not perfect in itself, is so far beyond the present status that it will be a relief to the great majority of cases.

The gentleman says the commission system is not in good repute. I think he is mistaken in that statement. So far as my own experience goes (and of course it can apply only to State commissions, to such as can be controlled by the States), where there are commissions they have resulted most beneficially to the people in respect to all State traffic.

In the State in which I live, among all of the grievances which have been submitted, among all of the cases called to the adjudication of the commission, there has been but one solitary case, according to the last report of that commission, where the railroad company has not yielded to the moral power and influences brought to bear upon them through the action of this commission.

I know that litigation between the people and the corporations has wonderfully decreased. While a few years ago our courts were thronged and glutted with this kind of litigation, it is now seldom that disputes between the shipper and the carrier are carried to the courts, so far, I mean, as they involve simply questions of State commerce and are within the jurisdiction of the commission. They settle them; and in my humble judgment they would be settled in this broader field of interstate commerce if we had that class of commission or if jurisdiction over that class of cases was conferred upon a commission concurrent with the courts.

Mr. Speaker, I am a friend of the Cullom bill. I want to see it passed. I am acting not only in obedience to the declared will of my State, instructing its Senators and requesting its Representatives to vote for that bill, and of my party, which at its last State convention declared in favor of this system, but I am acting in harmony with the dictates of my own judgment in the premises. I believe it will produce relief. I believe it will settle these vexed questions. I believe we will hear no more of the extortions of corporations; that the extortions will cease to exist under the beneficent influences of this beneficent law, and therefore I am heartily and thoroughly in favor of its adoption.

Interstate Commerce.

SPEECH

OF

HON. RANSOM W. DUNHAM,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 21, 1886.

The House having under consideration the bill (S. 1532) to regulate commerce—

Mr. DUNHAM said:

Mr. SPEAKER: The object of all legislation is to accomplish some good, either to government or people. I think it will be admitted that legislation which benefits neither is no good and it would be better to avoid it. Beyond doubt legislation that results in injury to great interests is unwise. An exception to this rule may be allowed if the people derive a benefit that does not stop with temporary gain, but if the final result is a disadvantage, then it were better never to have been done.

Dangers beset the pathway when prejudice or imaginary grievances stand as guideboards to action. The crooked road of blind passion is not the straight, smooth highway that true statesmanship seeks to tread.

The bill now under consideration proposes to deal with the largest single interest in this country, to control and regulate its business. The railroads of the United States represent some $7,000,000,000 in capital, cover 130,000 miles of track, and give employment to nearly one million men, and directly give support to at least five millions of people. Should the result of our action prove ruinous to this immense interest the people, who will finally become the real sufferers, will justly hold us responsible.

No one will attempt to deny but what unrestrained license has been injudiciously taken advantage of by railroad corporations until public sentiment has demanded a correction of evils.

An admission of this fact must be accompanied with the statement that corrections have been largely made, in some sections in obedience to positive law, in others by advice and recommendation of commissions, and in others by the law of necessity known as competition. Positive law in many cases has reduced rates of freight and passenger tariffs, but competitive necessity has carried the figures lower than any legislative body ever dared to positively demand.

Now comes the question, how shall evils still existing be reached? Shall it be done moderately, in a spirit of fairness, within the bounds of reason, or shall severe and stringent measures be taken, such as can only ruin and leave desolation to follow?

Any real friend to the people, any true believer in doing the greatest good to the greatest number, will promptly say a cautious movement is the best. To creep before you attempt to walk is natural, and if you attempt to overreach nature you will certainly fall.

General and not individual interests or benefits must be looked to. Whole communities or States or several States, and not localities, justly claim the greatest consideration. True, a proper regard for the rights of all earnestly prescribes that all shall be treated as nearly alike as possible, but the rule of law is as old as the centuries that what benefits the public must control against private interests.

Legislation on the subject of commerce between the States claims the attention of Congress. All know it is a difficult subject to handle. The conflicting interests of capital and labor; the question of how far legislation can go against corporations; to what extent they can be regulated and yet not interfere with the demands of the people, not ruin the wages that go to the thousands of employés. These considerations claim our careful attention. I do not believe we should treat a great business subject like this under a spirit of party politics, or allow our action to be controlled by hopes or fears as to how many votes it will make or lose. That corporations have no souls has repeatedly been proven to be correct; that legislative bodies have often met them on their very ground and in their action cut to the quick does not admit of argument.

The gentleman from Texas [Mr. REAGAN] is the father of a proposed act to regulate and control interstate commerce, so far as it is carried on by railroads. In my judgment the bill in its present form is un-

wise, uncalled for, unjust, and if ever enacted into law is so proscriptive in its terms that it will defeat itself, at the same time it may work ruin to the great interests it seeks to control, and in the end cause troubles innumerable, such as vexatious and expensive law suits, delays to business, practical ruin to the capital invested, discourage the building of new lines, thereby hindering and checking the growth of new communities, and what is more important at this time than all other points its certainty of interfering with the rights of labor. The terms of the bill are arbitrary and not flexible as ought to be the case. It is particularly objectionable in that no authority is given to any officer or board to meet the varied questions as they arise and decide them in a spirit of fairness and justice to all concerned. Our best authorities universally agree that commissions are the best remedies thus far produced, and in all the States that have adopted them not one has failed to work admirably, and in scarcely a case have they failed to equitably adjust and satisfactorily settle all differences.

The interests of railroads and the people are so closely blended that the necessities of both are supplied from each other, but in case of disputes arising a prompt and equitable settlement is advisable and desirable for both. Now, admitting this, what better mode can there be for regulating interstate commerce than by means of a board of commissioners?

The bill under consideration ignores all chance for fair adjustments, and proceeds upon the theory that iron-clad law is the best. A great railroad is nothing more than an immense commercial house. Certain rules for manner of conducting the business and government of employés are necessary, but danger of disaster might lie in the path should they be so firmly bound as to be unable to follow the laws of trade.

One of the difficulties in the way of Congressional legislation on this subject is the fact that any United States law can only affect property passing from one State to another; therefore many roads must necessarily be wholly exempt, and in that way may make rates which may prove ruinous to others. The Reagan bill does not establish rates directly, but in its terms so controls them that perhaps their position would be no worse if it absolutely and arbitrarily did make them. Section 4 refers to what is commonly known as the short and long haul, and prohibits the charging more for the former than the latter. This subject is the one that creates more discussion, more complaint, than any other, and yet is less understood than any one of the various railroad problems.

The natural tendency of every one is to condemn the practice, and the general public, not being familiar with all the items that go to make up the business and plans of a railroad company, jump at conclusions, saying it stands to reason it must be wrong. A wise legislator will examine carefully his footing, and doing this he must admit that men who have spent their lives in the transportation business, men who have studied the question in all its forms, looked at it in every direction and from every standpoint, surely ought to know more about it than the mere theorist. Who would think of engaging a blacksmith to handle the delicate mechanism of a watch? Who would employ a chimney sweeper to clean the walls of an elegant mansion? What manufacturer would place his machinery in charge of a house carpenter? What great mercantile house would place its business in the hands of a contracting mason? Where is the legislator so wise in his own conceit as to deny the conclusions of practical railroad experts?

Let us suppose a few cases where the prohibition of short-haul charges may work an admitted injury. For instance, the rate of freight from Boston to San Francisco is $1 per 100 pounds, and this is divided among six railroads in certain proportions to each. Suppose the Lake Shore road, running from Buffalo to Chicago, through a part of six States, receives for its proportion of the work 15 cents per 100 pounds; under the terms of this Reagan bill it is prohibited from collecting more than that rate on all similar freight shipped over its line, either between its extreme terminal stations, or from any one station to another on any part of its line. This, also, applies to all the other roads that form a part of the contracting line from the Atlantic to the Pacific Oceans. In other words, Boston being a competing point for various lines of roads to the Pacific coast, and also with water communication claiming a share of business, rates for through freights made from that city must be no less in proportion than from one small inland point to another.

Again: suppose, as is often the case, the rate of freight from Chicago to New York via Jersey City is 15 cents per hundred pounds, shipped by railroad through seven States, must every interior non-competing point have the same? Has Chicago, that has water communication all the way to New York, no advantage over the non-competing interior places? Can not a railroad company be allowed to make a low rate that will enable it to compete with the water route without being compelled to do the same for every other point that has no water advantages, and whose business compares with Chicago as a bucket of water to the great ocean?

Shall a railroad running from Chicago, obliged to compete at that point with several other roads, all anxious for business, be tied down at all its non-competing stations to accept rates forced frequently by ruinous competition? Why should Kansas City, Omaha, Minneapolis, Cincinnati, Indianapolis, Saint Louis, great Western cities of trade and transportation, favored by nature in location, and, like Chicago, covered with a network of railroads reaching out in every direction, be placed on an equal footing with intermediate stations?

Some may claim that local points east of Chicago are entitled to same rates to local stations west of great Eastern cities like Baltimore, Philadelphia, New York, and Boston as are allowed between Chicago and the Eastern cities just named. There is no denying it does look so to the superficial observer. But let us examine the question. Chances are an empty car must have been hauled to the western point and that it must after discharging be hauled to the eastern terminal. Railroad experts say there is more work in this than through hauling. Facilities for loading and unloading at the interior points rarely equal the extreme stations. Neither the shipping nor discharging point has any competition, and probably the road is getting no more than fair compensation which may be necessary to in a measure regain what it has lost by the competition of water and other roads. This brings forward the question why the country should apparently be at a disadvantage over the city terminal point. The reply is, it has always been so, and is due to necessity and not always to justice.

Now, let us look at another view of the case—the standpoint of a manufacturing concern—the difference between two companies in the same business, one located in a large city, the other in a country town; one pays perhaps $250 per front foot for land whereon to erect its buildings, the other pays $250 per acre; one pays enormous city taxes, the other very little; high city rents and prices for provisions force one to pay its employés much more than the other; both of these concerns sell their product perhaps in the same sections; the city goods must go by rail directly through the town occupied by the other. The question arises, how is the city company to compete? How can it be done except by the railroad company charging more for the short than for the long haul, and thus enabling both to lay down their goods at a given distance at precisely the same cost? Locate New York as the city and 50 miles in the interior of New Jersey as the country, with Virginia and other Southern States as their market. The Pennsylvania road must give the New York dealer lower rates or he must close up his business. Unless the Pennsylvania road does charge the New York manufacturer less than the Jerseyman, then it certainly discriminates in favor of New Jersey.

Mr. REAGAN. May I ask the gentleman a question?

Mr. DUNHAM. Certainly.

Mr. REAGAN. Is it your conception that it is any part of the business of the railroads to equalize the profits of private parties by decreasing the profits of one and enlarging those of another?

Mr. DUNHAM. I will say in response that it may not be a part of the business of the railroads. I am willing to concede that it is not; but it is a necessity at times to communities; and I understand, and in fact it is claimed, that the railroads are run for the benefit of the people. If it is necessary for the benefit of a community to place that community, in reference to freight rates, at any time equal to another community, then the railroad company may do so by making a concession to one so as to enable it to compete with the other.

Mr. REAGAN. Does my friend think that a State government or the United States Government would dare to do such a thing as that?

Mr. DUNHAM. I do not know that they would. I do not think it is the business of States; but it is probably the business of railroads, for two objects; one to make money for their stockholders, the other for the people.

Mr. O'NEILL, of Pennsylvania. Does not my colleague from Illinois understand that the railroads in that part of the country represented by the chairman of the Committee on Commerce, generally have been failures? They pay neither interest on their bonds nor dividends on their stock; and he speaks from the standpoint of broken-down railroads.

Mr. REAGAN. No; I do not speak from that standpoint. I will take any road; take the Pennsylvania road, for example, if you call that a broken-down road.

Mr. O'NEILL, of Pennsylvania. No, sir, I do not; but I speak of the general experience of the gentleman from Texas in reference to railroads.

Mr. REAGAN. The gentleman misapprehends the position I take.

Mr. DUNHAM. And not only is it for the benefit of the railroads to make these concessions to the towns or to manufacturing concerns, but it is for the benefit of the people, and the railroads and the people belong together, their interests harmonize. If the people crush out the railroads they crush out themselves. If the people by a series of obnoxious measures of legislation or of injurious legislation compel the railroads to do business at a rate that is ruinous to them they might as well close out their own business, because a railroad company is like a mercantile establishment; if it constantly loses money it goes to the wall. If a railroad company constantly loses money they go into the hands of a receiver, wiping out the stock; in fact they fail. Now, it is for the interest of the railroads to help the towns through which they run; and if the city of New York needs a rate lower to Virginia, North Carolina, or Texas, owing to the increased cost of manufacturing business in that city over a town 50 or 100 miles in the interior, it certainly is for the benefit of the people of New York that they should have that rate, and it is no injury to the town 50 or 100 miles away, especially

as they both sell their manufactured goods 500 miles off at the same price.

The Reagan bill prohibits what is proper and legitimate in such a case as this, and yet it inconsistently says, "all charges for such services shall be reasonable."

Now, we will turn in another direction. Millions of bushels of grain arrive at the port of Buffalo each year via the lakes from the West. There are several ways of getting this grain to New York—one all water, one all rail; other, part rail and part water. The New York Central road is wholly within the State of New York. If it carries any of this grain it must compete with the Erie Canal which last year carried millions of bushels of grain at under 5 cents per bushel. It can do this, has done it in the past, will do it in the future; and yet from Buffalo to interior points it charged and collected a higher rate than 5 cents and also a higher rate from interior points to New York.

Can the Erie, West Shore, and other roads that reach New York by going through another State compete, under this Reagan bill, with the New York Central? You may say they can, but if they take grain for one person from Buffalo to New York, then they must do it from Buffalo to all points and from all points to New York at the same rate. In other words, severe United States law forces several roads toward bankruptcy, while another with no better facilities bears off the palm, collects the profits, and does all the business. How much better would it be to have a railroad board of commissioners that could adjudicate promptly upon such cases and place such parallel roads on equal terms. Here is a discrimination, or rather here is proposed to be a discrimination, in favor of the New York Central Railroad upheld and supported by law.

The scales of justice will never balance under such weights as this. Under this short-haul prohibition section railroads that now make through rates up and down the Atlantic coast from Maine to Texas must retire from the business, for they surely can not afford to do local work at prices they must concede in order to compete with the ocean steamers. Must the lines of railroad that take cotton and sugar from New Orleans or other Southern and Western cities to Pittsburgh, thence on to Philadelphia and New England, making rates that compete with the Mississippi and Ohio Rivers, be compelled to do all their local business at the same rate? Shall the great Southern ports, like New Orleans, Mobile, and Galveston, blessed by nature with extra means of communication, have no advantages over interior towns?

I say to you your theory of anti-short haul is wrong; that your idea is nothing but a theory; it is based purely on an imaginary grievance. Enforce this principle and the immense through business from extreme Western points to Eastern cities will surely cease. More than half the time through contracts are made at bare cost and frequently for much less. The roads can not afford to and will not do the local traffic at prices forced by ruinous competition.

Pass this bill and the Western roads can only haul their freight to the lake and river cities during the season of navigation. When ice-bound winter settles upon the water ways the West must keep its products, and the East failing to accumulate in the fall must go without. Adopt such a measure as this and you turn back the car of progress twenty-five years.

Argue, if you please, that local points between Chicago and Saint Louis and the seaboard are entitled to the same rates or even the same proportionate rates—you must concede that the great country west of the lakes and Mississippi River is the gainer by the low rates made by railroads to the Atlantic coast. Between Chicago and the seaboard lie great commonwealths, great cities that enable the agriculturist to obtain prices that approach at least fair remuneration for their labors. Through rates by railroads tend to bring remote sections of one common country on to a par with others. What matters it to the consumer of breadstuffs in New York whether they come from Ohio or Iowa, Dakota, and Nebraska? What matters it to him whether one shipping point pays more or less than another? It so happens that the great consuming part of this country is east of the Alleghanies. What they want is cheap food, and they have no more partiality for Ohio than for Nebraska.

What the great producing States and people want is cheap freights and rapid transit, and any interference by legislation that will eventually become a stumbling-block on their road to wealth will not be allowed to stand. The great law of competition briefly mentioned in the first part of my remarks has so far worked wonders in favor of both sections and drawn each, financially, commercially, and agriculturally, much nearer together; and more than likely they are both better off to-day than they would have been had the Reagan proposition been law many years ago.

Now, having considered the short-haul subject, let us look a little at another one of the prohibitions of this Reagan scheme. I refer to rebates or drawbacks, and while it would be well to prohibit in certain cases, I think it would not be in all. For the same kind of service and from and to same points rebates should not be given to one shipper over another. For instance, through shipments from West to East or East to West should be equal; no advantage should be given to the exclusive gain or benefit of one shipper and some other one left out in the cold. Suppose it could be demonstrated to a board of commissioners, if such were established, that in certain cases rebates should be allowed, might it not also be proven that the allowance was just, proper, and for general benefit? The Reagan bill says positively it shall not be done. No matter how plain figures may demonstrate its fairness, an iron-clad law stands, like a solid wall, face up against honest competition.

We all know the differences that have existed among the great trunk lines as to rates from the West to Philadelphia, New York, and Boston—differential rates. New York and Philadelphia terminal roads have long practically quarreled upon this subject. One demanded a concession, the other refused; result, cuts, private running of each other, unsettling of prices, uncertainty, doubt in commercial circles. Suppose, now, the rate on grain from Chicago to New York be 25 cents per hundred pounds, and to Boston 30 cents. Both are seaboard points; both have ocean connections to Europe, and universally the rates by water are the same. Under this difference of 5 cents in favor of New York will the Chicago shipper send anything via Boston? You may say the ocean carrier must get less from Boston than from New York. When he is carrying grain from New York to Liverpool for rates from 2 cents per bushel down to ballast, how much less must he accept from Boston?

That argument must drop from its own weight. Why should the Boston rate be 5 cents over the New York rate? First, because New York and Philadelphia terminal roads demand it. Second, because Boston roads claim it from the additional distance. Third, because less competition enables them to obtain it. Fourth, because materially less business warrants it. Now, how is the Boston exporter to compete with New York? Simply by the railroad company saying to the exporter, "If you put this grain on board a vessel and ship it to Europe we will rebate you 5 cents per 100 pounds on your rail freight." Who has lost anything by this rebate? Who would lose if this rebate was not made? First, the Boston railroad would not have the business at all; second, the workman who handled the property in Boston would look elsewhere for his labor; third, Boston as a terminal point would suffer because of advantage given to another. Who would gain in this transaction? New York railroads would get all the haul, New York laborers get the handling, and New York elevators the transfer charges.

In this case what harm is a rebate? Why is it not a positive benefit to Boston? The Reagan bill will not allow this. A railroad commission would, and justly so, too. Give authority to a board to study the whole situation, ascertain all the facts, their bearing on the interests of different cities, needs of the nation in general, natural laws of trade and commerce, facilities requisite to successfully compete in a lawful way with others, and they can readily decide what is fair between all. In such a case as I have instanced a denial of rebates places one great city at a disadvantage compared with another and restricts men to certain routes. It would in fact be a discrimination. The Reagan bill is so straight in such a matter as this as to fall over backward. The phrase is old and homely, but goes to the root of the situation, shows its iron-clad rule and the usual result of overdoing.

The Reagan bill allows no rebates whatever—the commission might allow them, but not to one man more than to another. In so far as either bill prohibits special privileges to any one shipper more than to all, it meets an universal demand for proper legislation that shall prevent what is usually called unjust discrimination.

I might continue this subject and present other cases justifying rebates—giving additional emphasis to my position—but their general nature would be the same. I believe it can be asserted without fear of successful contradiction that rebates on freights are at times necessary to bring business—that by them no harm is done; further failure to allow them would work injury in some quarters. The more we export of our products the better is our financial condition. No one ought to complain if our railroads encourage shippers by giving them facilities such as they need. Other countries are now so strongly competing with us that it requires the closest possible figuring to place our goods in the markets of the purchasing nations.

Right here may be given a business transaction only a few weeks old, perhaps bearing more on the "long and short haul" question than on "rebates."

A New York exporter presented to certain railroad freight agents the price at which he could sell a certain quantity of wheat in London—the expenses of shipment aside from freight—the cost of the wheat on board the cars in Chicago, and allowing for himself the smallest kind of commission, and proving that the business could be done by their giving him an extremely low rate of freight from Chicago to New York.

The rate asked was less than 8 cents per bushel, while all-water rates at that date were fully 9 cents. The terms of the London offer required the grain delivered in London at such an early date that the shipper could not, no matter at what rate of freight, avail himself of the all-water route from Chicago. Time was the essence of this contract. The railroads, anxious to do business and get something for their cars rather than have them stand idle, accepted the terms and hauled the grain. Any one with the slightest business knowledge can readily see that if compelled to carry out the "short-haul" prohibition of the Reagan bill they never would have taken this contract. America never could have shipped this wheat. Chances are India would have once more reaped an advantage. Who for one moment would claim as a business or

financial principle that roads can afford to carry grain 1,000 miles for 8 cents per bushel, or $2.65 per ton, equal to 2.64 of a mill per ton per mile?

What figures demonstrate to be true as to grain shipments will apply with equal effect to cotton or any other product that we export, and railroad experts know the necessity of these concessions at different times and in different places.

We all know the importance of our exports; how they regulate the balance of trade; how prosperity rises and falls in their volume.

Railroads thrive when the country is prosperous; why should not they by liberality and concessions contribute to help the general welfare? It is for their interest to do so. Is it for our interest to tie them down, bind them so that they can not meet necessary cases?

Section 2 of the Reagan bill is chiefly noted in its prohibition of pooling, and the people have come to look upon a pool among railroads as one of the great evils. I have no particular defense for them, and yet am sure they are not as black as many would paint them. Men call them combinations to "extort unreasonable rates." This may be true in some cases, but in many it is not. Pooling does sustain rates, but rarely if ever does it raise them. If a pool breaks, rates "go to pieces." If another pool grows up from the ruin the new rates are generally less than before the "break-up."

A well-established pool gives stability to rates so that business men can safely enter into contracts for the purchase and sale of goods, relying upon established rates as against unsettled and shifting figures.

One Western pool has been maintained for years, and yet the country through which its roads run has grown rapidly in population and wealth.

The object of pools is to prevent rate-cutting—an operation that breeds disaster to roads concerned, and rarely proves of permanent benefit to the community. Railroad wars frequently end in squeezing shippers all the more to get even for foolishness. Perhaps a law that beyond all question prevents unjust discriminations would render unnecessary absolute prohibition of pools. Pools rigidly adhered to bring all shippers on to precisely the same platform.

It is claimed by the author of the Reagan bill that it does not fix rates; but when it prohibits pools it practically says there shall be no permanent rates, and in a measure sustains "rate wars" and general cutting.

Before I close some review of the course of rates and business during the last quarter of a century may not be out of place, and in my judgment the points are worthy of attention as bearing upon this question of regulating "interstate commerce." The great reductions in rates in shipping by various routes, rail and water, are perfectly marvelous. Our ablest business men, our great statesmen, were all utterly unable to even imagine that what has occurred could possibly have come to pass.

Within twenty-five years I have personally known of 50 cents per bushel having been paid on corn shipped all water via lake and canal from Chicago to New York. Marine insurance at the same time ranged from 1 per cent. in the summer season to 3 per cent. in the dangerous seasons of early spring and late fall navigation.

In the early days lake vessels usually carried from 14,000 to 20,000 bushels, and the first appearance in the Chicago River of a 25,000-bushel-capacity vessel was the talk and wonder of the town. From that day to this the increase in size has continued, until now boats steam from Chicago to Buffalo carrying 100,000 bushels.

With the increased capacity have come decreased rates of freight, and within three years corn has been moved at 1 cent per bushel from Chicago to Buffalo. During the summer of 1885 many a cargo was shipped via all-water way from Chicago to New York at 4¼ cents per bushel. During the days of high lake freights railroads hauled grain to Chicago from the West, and no one dreamed that they would ere many years be discharging their cars at the seaboard instead of Chicago. The early car-loads rarely exceeded 350 bushels, while now 600 bushels is common and 700 to 800 bushels not unusual.

For more than fifteen years the railroads have been delivering large quantities of freight from Western points to the seaboard without breaking bulk.

About the first heavy business was done in the winter of 1873 and 1874, induced mainly by the short wheat crop in Europe. The demand at that time was so large that all-rail rates of 36 cents per bushel were freely accepted by shippers from Chicago to New York, and millions of bushels went forward during that winter. Against these rates the maximum tariff is 25 cents per 100 pounds or 15 cents per bushel.

All over the country railroads are to-day competing with the water ways for business. The question naturally arises, What has brought about all these changes? Reasons are plenty. Steel rails, larger cars, better roadbeds, reduction in grades, improved machinery, heavy and more powerful locomotives, cheaper money, cheaper fuel, large decline in cost of building roads and in cost of all rolling-stock, and in addition to all the above increased and constantly increasing competition. No sooner is one road built than capital, ever anxious for investment, crowds along another.

Division of business naturally breeds jealousies—each anxious to outdo the other—result lowering of rates, and, of course, monetary gain to the business interests. Railroads are fast becoming as plenty as highways. One can hardly think of a city or town of any importance but what has more than one road running to or through it. Great cities have been built, hundreds of millions of wealth added to them, peace and prosperity showered in blessings upon the inhabitants, and all the direct result of rail connections.

Very few people, following the natural unreasonableness of mankind and the general disposition to imagine grievances, stop to think how low freight and passenger rates have become. Some remote sections may not be on full equality with the more populous divisions, but the inhabitants thereof should "possess their souls in patience" and remember the others have been where they are now, and that their good time is coming.

The great West has been developed and peopled by the railroads, and no one thing has done so much toward its improvement as the giving of the cheaper rate for the long over the short haul.

I am surprised that the Western members in this House are so determined against this principle of railroad transportation. Prohibit this and the products of the West will not and can not be so cheaply laid down in Eastern and foreign markets as now. It is not for the interest of East or West to legislate against the universal laws of trade.

In direct connection with my reference to the large reductions that have taken place in freight charges, I now call the attention of the House to the following article from a leading journal in Philadelphia showing conclusively that rates have fallen to what seems to me about as low a point as people can ever expect:

The Pennsylvania Railroad's freight tonnage moved 1 mile in 1885 was the largest in the history of the company, being 235,906,277 tons greater than the total tonnage moved 1 mile in the preceding year. The average rate per ton per mile charged to the shipper in 1885 was 0.627 cents, being the lowest rate ever received by the company since its organization, and 0.113 cents per ton per mile less than the rate received in 1884. In the year 1865 the total amount of freight moved 1 mile was 420,060,260 tons, a very large quantity for that period, but in 1885 the total tons of freight moved the same distance had gown to the enormous amount of 3,318,466,263 tons. In 1865 the average rate per ton per mile received for carrying freight was 2.665 cents, while in 1885 the average rate was but 0.627 cents. The amount of reduction in the charge for transportation in 1885, computed on the difference between the rate in that year and that which was charged in 1865, made a saving to shippers of $67,630,342.44. The total reduction for twenty years, computed upon the same basis, shows a saving of $565,238,590.22. Had the Pennsylvania Railroad charged 1 mill per ton per mile more for the transportation of freight in 1885 than the rate paid the receipts of the company would have been $3,318,466 greater than they were. The following statement, showing for each year since 1865, the number of tons of freight moved 1 mile, the rate per ton per mile, and the amount of reduction in any given year by the Pennsylvania Railroad Division, computed on the difference between the rate in that year and that which was charged in 1865, will be found interesting:

Years.	Total tons one mile.	Average rate per ton per mile.	Amount of reduction each year, computed on rate of 1865.
1865	420,060,260	2.665	.....
1866	513,102,181	2.282	$1,965,181 35
1867	555,657,813	2.092	3,241,219 27
1868	765,775,500	1.906	5,129,136 50
1869	732,711,312	1.718	7,128,176 12
1870	825,979,602	1.549	9,217,933 36
1871	1,011,892,207	1.389	12,911,744 56
1872	1,190,144,036	1.415	14,864,899 01
1873	1,384,831,970	1.416	17,296,551 31
1874	1,372,566,976	1.255	19,353,194 36
1875	1,479,414,466	1.958	23,774,190 47
1876	1,629,742,021	0.892	28,895,326 03
1877	1,494,798,198	0.980	25,187,349 64
1878	1,732,003,131	0.918	30,258,094 70
1879	2,136,708,877	0.796	39,935,088 91
1880	2,298,317,323	0.880	41,024,964 22
1881	2,655,438,764	0.799	49,550,487 34
1882	2,879,542,701	0.817	53,213,949 11
1883	2,996,892,567	0.819	55,322,636 79
1884	3,082,499,986	0.740	59,338,124 73
1885	3,318,466,263	0.627	67,630,342 44
Total reduction for twenty years	.....	.....	565,238,590 22

These figures are wonderful, and I will venture the opinion that scarcely any one, including even railroad men, has ever realized their importance. They show the average rate per ton per mile to have been 2.665 cents in 1865 and .627 in 1885. Beyond, and what is more astonishing, had the rate been the same in 1885 as in 1865, then the road would have received in excess of what they did collect $67,630,342.44. What is true of this road is true in a proportionate manner with nearly every other railroad in America. Such statements are worthy of careful consideration by those who habitually condemn on sight everything connected with a railroad. They dispose pretty effectually of the argument that all railroads do nothing but oppress the people.

Having considered long and short hauls, rebates, polls, &c., I come now to the more important matter of wages paid to employés. The labor problem is the great leading question before the country to-day. Congress and all the State Legislatures are engaged in wrestling with the matter. To improve the condition of the workingman, to lighten his burden, to raise him in life, the power of legislation is now invoked.

I have estimated that five millions of our people to-day draw their support from the railroads of the country. Figures I will now give show former and present wages paid to employés by the Pennsylvania Railroad Company and the Chicago and Northwestern Railway Company.

PENNSYLVANIA RAILROAD COMPANY,
OFFICE OF THE FOURTH VICE-PRESIDENT,
Philadelphia, April 1, 1886.

MY DEAR SIR: I beg to inclose a statement showing the reduction in freight rates on our railroad from 1865 to 1885, by which you will see that the rate per ton per mile was 2.665 cents at the former date and .627 cents at the latter, or that the rates are now less than one-quarter what they were twenty years ago.

We have had our check rolls carefully examined in order to ascertain what wages have been paid to our employés during the same period of time, and whether there has been any reduction therein to correspond with the decreased rates of freight. We find that the wages paid the men employed in our shops between 1860 and 1885 are as follows:

WAGES PER HOUR.

Occupation.	1860.	1880.	1885.
Blacksmiths	$0 12½ to $0 17	$0 15 to $0 33	$0 15 to $0 32
Boiler-makers	0 15 to 0 18	0 15 to 0 24	0 17 to 0 26
Machinists	0 11½ to 0 17½	0 16 to 0 15	0 17 to 0 35
Carpenters	0 15 to 0 25	0 15 to 0 22	0 17 to 0 25
Sheet-iron workers	0 12 to 0 17	0 16 to 0 22	0 19 to 0 25
Laborers	0 8 to 0 10	0 10 to 0 16	0 10 to 0 16
Molders	0 14 to 0 16	0 15 to 0 22	0 16 to 0 22
Car-builders	0 13½ to 0 16½	0 12 to 0 21	0 17 to 0 23
Painters	0 15 to 0 16	0 11 to 0 23	0 15 to 0 24
Track laborers:			
Philadelphia division	0 10 to 0 12	0 11 to 0 13	0 13 to 0 13
Middle division	0 10 to 0 10	0 11 to 0 12	0 10 to 0 13
Pittsburgh division	0 10 to 0 13	0 11 to 0 14	0 10 to 0 14

WAGES PER DAY.

Passenger enginemen	$3 80	$3 80	$3 80
Passenger conductors	2 25	2 25	2 25
Passenger firemen	1 80	1 80	1 80
Passenger brakemen	1 25	1 25	1 25
Freight enginemen	$4 00 to 4 10	$4 00 to 4 10	$4 00 to 4 10
Freight conductors	2 80 to 3 50	2 80 to 3 50	3 10 to 3 50
Freight firemen	1 90 to 2 00	2 00 to 2 20	2 20
Freight brakemen	1 80 to 2 10	1 80 to 2 10	1 90 to 2 10

I think this will satisfy you that your position is entirely correct, that while the railroads are carrying freight at rates equal to about one-quarter of those charged twenty years ago, their employés are if anything receiving higher wages than at that time.

If you would like to have the detailed statements from which I have taken these items, of course I shall be glad to send them to you.

Very truly yours,

JNO. P. GREEN, *Vice-President.*

Hon. RANSOM W. DUNHAM,
United States House of Representatives, Washington, D. C.

CHICAGO AND NORTHWESTERN RAILWAY COMPANY,
OFFICE OF SECOND VICE-PRESIDENT AND GENERAL MANAGER,
Chicago, April 26, 1886.

DEAR SIR: Absence from the city has prevented an early reply to your esteemed favor of April 6.

I attach herewith a statement giving the figures you ask for, and also giving the average rate per ton earned on freight and per mile for passengers on this company's lines in 1868 and 1885 respectively.

I trust this statement will be useful to you.

Truly yours,

M. HUGHITT.

Hon. R. W. DUNHAM,
House of Representatives, Washington, D. C.

CHICAGO AND NORTHWESTERN RAILWAY.

	1860.		1886.	
	Per day.	Per month.	Per day.	Per month.
Engineers	$2 50	$65 00	*$3 75	
Firemen	1 25	32 50	*2 11	
Conductors, passenger		65 00 75 00		†$83 33 90 00 100 00
Conductors, freight		55 00		†60 00 75 00
Brakemen, freight		50 00		†45 00 50 00
Brakemen, passenger		30 00		45 00
Baggagemen		35 00		45 00 50 00 60 00
Machinists	1 50 2 00		1 75 2 90	
Laborers	80 1 00		1 25	

*Runs of 100 miles. †Runs of 2,000 miles.

CHICAGO AND NORTHWESTERN RAILWAY.

Owing to the destruction of many of our records by the Chicago fire we can not give you the earnings received in 1860, but in 1868 they were as follows:

	Cents.
Average rate per ton per mile for freight	3.13
Average rate per passenger per mile	4.02

While in 1885 they were as follows:

Average rate per ton per mile for freight	1.19
Average rate per passenger per mile	2.36

The significance of these figures, it will readily be seen, is in the fact that, notwithstanding all the reduction in freight rates, the wages have in most cases been increased and never decreased. The moral to be observed in this is that apparently rates are now at a minimum figure, and any hostile legislation that shall result in crippling must of necessity affect the labor. When we take into consideration the large number of railroads now running in this country barely paying expenses, many returning nothing to their stockholders, many in the hands of receivers, practically bankrupt, it stands as a warning to us against increasing burdens already too heavy to bear.

As bearing upon the question of earnings, expenses, and wages, I will read extracts from a letter written by the president of one of the leading New England roads. It is another interesting statement of the past and the present, and demonstrates the tendency, namely, while increased earnings, at same time increased percentage of expenses, no decrease but increase to labor.

APRIL 9, 1886.

MY DEAR SIR: I am unable to answer fully the questions which you ask me regarding the amount of wages paid the employés of railroads and "the cost of running a railroad before the war and at present."

Of course I can answer these questions regarding our own road, but what I suppose you desire to obtain is the amount of wages generally paid railroad employés in New England before the war and since, and the percentage of expenses to the cost of operation.

This can be done only by taking the reports of the different railroad companies for the two periods of time and by comparison making a general average.

The first railroad returns made to the Legislature of Massachusetts of which I have knowledge were published in 1839. This series of reports, commencing at that date, can undoubtedly be found in the Congressional Library.

These reports show the wages paid switchmen, gate-keepers, signalmen, and watchmen. The wages paid the common laborer and trackmen are not given in these reports, but were from 90 cents to $1 per day.

There has been up to the present time an advance upon these wages of 35 to 50 per cent., with fewer hours of work and less severe requirements. These reports also show the amount of the gross increase of the different roads in this State, the cost of operation, the net income, &c., and in fact most of the information desired about the railroads of that period, excepting the rates charged for the passenger and freight business. A comparison of the cost and income of the railroad business "between then and now" may be made by examining these reports in connection with the reports of our railroad commissioners of the present day.

On our own road the report of November 30, 1860, shows the freight income to have been $147,173.95, the expenses to income to have been 48 per cent., and the average receipts per ton of freight per mile to have been 5.37 cents.

The report of September 30, 1884, shows the freight income to have been $461,551.95, the expenses to earnings to have been 70 per cent.; average receipts per ton of freight per mile, 3.05 cents; showing a reduction of 43 per cent. in rate per ton per mile, and an increase of 46 per cent. in per cent. of expenses to earnings.

I do not know as this information will be of any value to you, but such as it is you are welcome to, and as much more like it as you may desire.

The National Board of Trade at its annual session held in Washington in January last fully considered the whole question of interstate commerce. This body is composed of delegates from the several commercial organizations of the country—business men noted for their careful study of questions that affect the commercial and financial interests of the land, conservative in their views, conscientious and earnest in their opinions. Their discussion of this matter is well worthy the attention of Congress, and I will therefore publish a portion of the debate that followed a report from their committee:

[National Board of Trade—Report and debate on interstate commerce—Friday, January 22, 1886.]

Mr. Pope, of Chicago, presented the following report:

"The committee appointed by the National Board of Trade to consider the several propositions upon its official programme relating to interstate commerce report that very recently 'A bill to regulate commerce' was presented to the Congress of the United States by a special committee of the Senate empowered to take testimony and fully investigate the wants of the entire country upon this important subject. The bill referred to is the result of the great labor and intelligent consideration of the whole question by the very able Senatorial committee mentioned.

After a careful examination of the bill named your committee offer the following:

Resolved, That the bill to regulate commerce introduced into the Senate of the United States by its special committee, January 18, 1886, and known as Senate bill 1093, is (subject to the exceptions hereinafter named) heartily approved by the National Board of Trade; that it is to be commended, perhaps, as much for what it does not undertake to accomplish (all attempts to fix arbitrary rates being wisely avoided) as for the provision made for the appointment of a national commission with ample power to regulate and remedy most of the evils now existing in interstate traffic.

We respectfully suggest the following amendments, which, in our judgment, would contribute materially to the efficiency and usefulness of the bill:

First. The striking out of section 4, which prohibits the charging or receiving of any greater compensation in the aggregate for the transportation of passengers or property for a shorter than for a longer distance, over the same line in the same direction, and from the same original point of departure. This board deems this to be an unnecessary restriction upon the freedom of transportation, and one in which its practical application would result in increasing rates charged for long distances rather than in diminishing those charged for shorter ones. It would debar many important transportation lines from participating in through traffic for long distances where the rates are too low to admit of their application to business terminating at local points on their several lines, such through traffic being a source of additional revenue at comparatively small additional cost. The remedy provided by appealing to the commission would impose upon the transportation lines a serious burden, and the multiplicity of cases arising would overtax the commission.

Second. The text of the second clause of section 1, on page 2, makes the provisions of the bill apply to the transportation of passengers or property by any vessel or vessels. In the judgment of this board all matter relating to transportation conducted wholly upon or by water should be exempt from the terms of the bill, the nation's water ways being open to free competition, and such competition being sufficiently extensive to afford ample protection to public interests, without further legal restriction.

Third. The salary named for each commissioner, $7,500 per annum, seems in-

adequate to secure that high grade of talent which the important service contemplated clearly demands. The administration of these great trusts in all their varied and delicate bearings requires that order of character, intelligence, and executive ability that is never idle, and always at a premium. The yearly compensation should not be less than $10,000.

WILLIAM J. POPE, of Chicago,
E. P. BACON, of Milwaukee,
CHAS. B. MURRAY, of Cincinnati,
PHILO PARSONS, of Detroit,
A. FOSTER HIGGINS, of New York,
Special Committee of the Board on Interstate Commerce.

The PRESIDENT. Gentlemen, you have heard the report, with the resolution attached to it, and the subject is now before you for discussion.

Mr. THURBER, of New York. I agree very generally with the points made by the committee, and I think that the Cullom bill is a great advance upon previous action that has been attempted in this direction. I am not entirely clear, however, in regard to this section 4, whether the allusion to this subject of long and short hauls should be stricken out. I am clear that it is impracticable to put matters of that kind in a bill without exceptions. I have not examined the bill closely to see whether the exceptions noted in the bill to such prohibition are sufficient to make it elastic enough for the railroads or not. Of course, in considering this question, we must look at it from two points—the point of the shipper and the point of the carrier. The great trouble heretofore in all transportation questions has been that there were two parties in interest, and that the carrier dictated absolutely to the shipper.

That has resulted in great injustice, and has given rise to a demand for some regulating legislation. It may be said that human nature is the same on both sides, and that if matters were reversed there would still be injustice done. There are sections of our country which I think are subject to very great injustice in transportation charges, as for instance, on the Pacific Railroad, where the intermediate States and Territories are charged double and treble as much for the services rendered as are the people on the Pacific coast. Freight was constructively hauled through to San Francisco at the through rate and then constructively hauled back again to the intermediate point at the local rate, which was twice as high as the through rate for the short distance. In point of fact, however, it was not hauled through to San Francisco and back; it was dropped at the intermediate point, and then charged for the through haul with the addition of the local rate back. It seems to me that there was a very great injustice, for the reason, in the first place, that the rate was excessive. There are parts of the United States—for instance, take points in Ohio and West Virginia—that are charged two and three times the rates that are charged on through tariff. The local rates on the Baltimore and Ohio have been especially excessive.

Mr. SUPPLEE, of Baltimore. To inferior points?

Mr. THURBER. I mean local traffic on the Baltimore and Ohio; their rates are excessive, in my judgment. I was looking into this matter about a year ago, and found that they were very much higher than our local rates in New York. I do not care, however, to criticise the report of the committee, as doubtless they have given the subject more attention than I have, and have studied the provisions of this bill, which I have not. I only raise the point for the consideration of the committee and the gentlemen here. But I do say here that the Cullom bill, as far as is shown by the synopsis which we have heard this morning, is a very great advance upon previous efforts in this direction. I would like to hear from the members of the committee in regard to it.

Mr. LORING, of Minneapolis. There has been no question presented to this board of such vital importance to the people of the Northwest as this one relating to interstate commerce, and no city in the country is so much interested in this question as the one I have the honor in part to represent, except perhaps the cities of the Pacific coast. The Board of Trade of Minneapolis adopted this resolution, which is an index to the sentiment of the people of the Northwest:

"*Resolved*, That our delegates to the meeting of the National Board of Trade be and are hereby instructed to oppose the recommendation by that organization of the so-called Reagan interstate commerce bill, as being wrong in principle and injurious to the Northwest."

They supposed at the time they passed that resolution that the Reagan bill would come up again for consideration at this meeting of the board. What they meant by that was to oppose the provision in the Reagan bill that there was not to be a larger rate charged for a shorter haul than for a longer.

Now, Mr. President and gentlemen, we received at the city of Minneapolis last year thirty-two and one-half millions of bushels of wheat, thirty millions of which was ground into over 6,000,000 barrels of flour and shipped to the seaboard. Three hundred millions feet of lumber were manufactured, a large portion of which was shipped to points in Minnesota, Dakota, Kansas, and Nebraska.

The jobbers of Minneapolis and Saint Paul received from the seaboard over one hundred millions of dollars in value of merchandise, which was distributed from these points north and west.

These vast interests depend largely on transportation facilities, and no city outside of Chicago is more highly favored than Minneapolis in this respect; the competition between the sixteen railroads centering at that point and the water route by the great lakes in the summer months enable us to ship our products at rates of freight which would be impossible under the provisions of any bill regulating interstate commerce containing a pro rata clause, or a clause that no railroad should charge more for a shorter than for a longer haul. If a bill should pass Congress containing such conditions the vast prairies of the Northwest, which are sending millions of dollars into the coffers of our Eastern friends, would go back to the Indians, and the gentlemen from the great mercantile houses who ask us to abolish the tax on commercial travelers would not be troubled about that question in the Northwest, as they would have no occasion to send drummers in that direction.

Under existing rates of freight, wheat can be delivered from the producer in Minnesota to the consumer at the seaboard, at about 30 cents a bushel. I have been informed by railroad men that under any rate that could be made, under any bill containing a pro rata clause, the cost would not be less than 80 cents a bushel, or $4 per barrel for flour from Minneapolis to New York, a price greater than certain brands of our flour are now selling at in New York.

Mr. President and gentlemen, competition is the great regulator of prices in commerce, and the competition of our railroads with the water routes is the factor which makes it possible for the creation of great States like Dakota and Minnesota, with their millions of wealth, and the increase in their population of a million of people in a decade.

We of the Northwest are in favor of a law creating a commission, to which all matters relating to the question of transportation shall be referred, but we do not believe the time has come for the enactment of any iron-clad law, attempting to regulate rates of freight between the East and the West.

Mr. POPE, of Chicago. I desire to say, that before presenting this report I had not exchanged one word, nor even conferred with the gentleman as to the sense of the Minneapolis Board of Trade, nor as to his own individual opinion. I also desire to say that I thank my friend, Mr. Thurber, for raising the point that he did. He has presented a very grave question, which exercises the minds of business men all over the country, and one not very easy to answer. No doubt there is a great deal of equity and justice upon that side of the case, but we, as a committee, after having discussed this question for a long time—and perhaps no question before us has received more discussion at our hands than this one—have reached this conclusion: That the benefits to be derived from what we recommend are greater than those that would come from the adoption of the law looking in the opposite direction.

Mr. Thurber has raised the point that in many places in West Virginia and Ohio, and especially in Idaho, grievous and severe rates are charged. I would like to ask him if he really believes that those rates would be reduced if the specially low rate from the Pacific coast to the Atlantic, for example, or to other points were entirely withdrawn. Our observation has taught us that wherever the lines can not maintain their local rates, from which they derive their chief revenue, they will withdraw entirely from the through business, which is taken at low figures, and leave the local communities to pay the same as before. That is the consideration which led us to the conclusion which we have reached. Not that the local rate would not be too high, but how would the withdrawal of the through rates affect the people who pay the higher local rate?

There is another element that enters into it. Observation has shown that wherever a low through rate does exist it tends to reduce the local rate. The intelligence of shippers is such, and the force of public sentiment is such, that the officers of railroad lines are more ready to make moderate charges for local business when their through rates are very low, because unless they do the contrast would become so sharp that it would provoke the indignation of the people. So the fact is that the lower rate on through traffic helps the parties at local points.

Mr. BACON, of Milwaukee. Mr. President and gentlemen, I hardly feel able to add anything to the able elucidation of this subject which you have heard from the chairman of our committee. The substantial points have been fully covered by his remarks.

It seems to me that after the statements he has made it is almost incontrovertibly shown that this provision of the bill is not only unnecessary, but that it would become entirely inoperative because of the latter part of the section, which provides, by appeal to the commission, for exemption from the restrictions imposed by it.

It may be of interest, however, to look a little further into the merits of the question. It is, at first sight, a very plausible proposition that rates for a long distance should not be, in the aggregate, to say the least, any less than for the intermediate or shorter distances. But if that principle were put into effect, as has been indicated by Mr. Pope, we should find that the remote sections of our country would be almost debarred from the use of railroad transportation facilities. The business of any line of railways consists largely of that which is naturally tributary to it at the local points, either originating or terminating at those points, and that is the class of business which every railroad first looks after.

The rates for such business are fixed with reference to the cost of the service, and with a view of obtaining revenue from it. But when it reaches the *termini* of its line, it does not fix the rates with reference to the cost of transportation with the addition of a suitable amount for profit. It fixes its rates with reference to what it can obtain for doing the service, and we all know that that service is to a very large extent surplus business. We also know that the operating expenses of a railroad are, to a certain extent, fixed; that is, that they will necessarily reach a certain aggregate. While the addition to the volume of its transportation might be perhaps 50 per cent., or even 100 per cent., as is often the case, from the through business, yet there would only be added to its operating expenses perhaps not more than 10 or 15 or 20 per cent. If railroad companies are to be debarred from that through business, as they would be by the application of such a rule as this, and the public be debarred from transportation facilities by rail over long distances, it would necessitate actually a higher charge for transportation to and from local points than are now charged, as the companies would be driven to derive their entire revenue from local business.

One word as to the justice of the matter, and I may take the illustration which has been cited by my friend, Mr. Thurber, in relation to the Pacific coast. The rates between the Pacific and Atlantic coasts are fixed, as every one of us at all conversant with transportation is well aware, by what it costs to transport merchandise by sea. The railroad lines between the Atlantic and Pacific are obliged to govern their rates to a great extent by the rates charged upon the ocean. They are not obliged to charge precisely the same rates, but they can only charge a sufficiently higher rate, in view of the greater dispatch, as will enable them to secure the business. But the starting-point is what it costs to do that business by sea. Our friends on the Pacific coast are entitled to that privilege.

If the railroads, after doing their intermediate business, find it remunerative to undertake this through traffic at rates which compete with the ocean service, the railroads are certainly entitled to do so, and the public are entitled to use the railroads at those rates. Why is the man in Utah or Colorado, or any other intermediate point, entitled to the same rate? He complains to the railroad company for charging him such price as the company deems necessary, and at which it can make a profit for performing the service, that rate being the same as for twice the distance. He might as well complain that the Almighty did not extend an arm of the Pacific Ocean into the heart of the continent by means of which he might have access to the Atlantic Ocean by water. If the rate charged to Utah or Colorado, or any point in those States, is reasonable and equitable, that is all that the man in Utah or Colorado can reasonably ask.

We find a provision in this bill to the effect that rates shall be reasonable and just, and that any person who thinks himself aggrieved in regard to the rate for transportation may have his remedy by applying, either by letter or in person, to the railroad commission and stating his case before it. He could probably apply more easily by letter than in person. The commission is then empowered to investigate it, and if, in its judgment, the rate charged is unreasonable and unjust, it is made its duty to so inform the railroad company. It is found, where State commissions exist, that such action on the part of the State commissioners is sufficient to correct the evil complained of, if it be proved to be an evil. It seems to me that in this way there is full protection to the public without any such artificial restriction as is now proposed in the fourth section of the bill. We all know that pro rata charge was a favorite cry for years and years, especially in the State of New York. No doubt our friend Mr. Thurber, is entirely familiar with that fact. But after years of discussion I think the public as a whole has become convinced that it is impracticable as a principle; it certainly has been dropped in that State. It never was put into effect there.

Mr. BACON. The measure proposed in the bill is simply a modification of the pro rata principle. It is an attempt to apply an almost identically similar principle in another form, and is an application which seems to be entirely unnecessary. If we had no such provision as this, requiring that the rate should be reasonable and just, it might be desirable to resort to some such artificial means as this is, in reality, to secure reasonable and just rates.

I want to state further, in this connection, that there is a provision in the statutes of the State of Illinois prohibiting the charge of the same or a greater rate for a less distance. This general statute of Illinois has been in operation now for fourteen years. The chairman of the Illinois State commission told me in an interview, about a year ago, that this one provision had occasioned them more trouble and difficulty than all the other provisions of the law, and the commission was satisfied that it should be repealed, and it had recommended the repeal in its annual report for 1884.

The facts stated in its report showed conclusively that it was an impracticable law. The commissioners were obliged to make rulings that were directly in the face of the law, and then shield themselves on the ground that nobody was damaged; that there was no injustice done by permitting the violation of the law.

Mr. NELSON, of Chicago. In short, the law is not enforced in that particular.

Mr. BACON. It has fallen into disuse by permission of the State commission. It has never been repealed, as I understand.

Mr. HOW, of Chicago. No, sir; it has never been repealed.

Mr. BACON. The fact that the commissioners found themselves in a position where they really had to recognize a violation of the letter of the law for the sake of both the public and of the railroad interests, it seems to me is conclusive evidence that in national legislation this ought to be avoided.

Mr. CORBETT, of Portland (Oreg.). My friend, Mr. Bacon, has alluded to the Pacific Ocean, and I have thought that possibly I might throw some light on that subject which I have considered to some extent, being a merchant of long standing on the Pacific coast.

Freight transportation by sea is about 40 to 50 cents a hundred to Portland, Oreg., and less, perhaps, to San Francisco. That is about the rate with which the railroads have to compete for certain classes of goods. It is, perhaps, a fortunate thing for us that we are located upon navigable waters, where vessels can reach us, so that we have these low rates of freight. The through lines of railroad are, of course, obliged to compete, to some extent, with the ocean carrying business, in order to get any portion of it. In other words, they have to fix a rate that, considering the insurance, the interest on the money, the risk by sea, damage and other things, it can be done for profitably, and that rate is from 60 to 80 cents a hundred for that class of freight; and they are either obliged to take freight at those rates, or not have it at all.

It has been stated here that the local freights to the interior are what enable the railroads to transport the goods across this country at this small cost, for this great distance of 3,000 miles. It is self-evident that if they were obliged to depend on the rate of freight that is fixed by the shipping interests that come to our shore, if they were obliged to take the rate of freight, considering all these matters of interest, insurance, and everything of that kind, they would be obliged to stop their through freight business; it could not be made to pay.

I have looked at this subject. It is a question that has come up in our community. The people there hardly comprehend it. The Granger interest, as they call it, want to fix a pro rata charge; they have advocated the Reagan bill in the Legislature. It is a want of knowledge, really, of these questions, that have been so ably discussed by the committee reporting this bill, that leads them to take the views they do. It might, perhaps, be well to strike out the fourth section of this bill in order to make it practicable. If that is retained, it seems to me it would be impracticable for the railroads on the Pacific coast to do business. They take this freight through to San Francisco at, say, 60 cents a hundred. The Central Pacific have charged, as stated by Mr. Thurber, a constructive rate to San Francisco, and then local rates back to Nevada. That is a parsely settled country, and of course they have to pay a high rate for freight.

Mr. DORR, of Chicago. Mr. President, I inferred, whether justly or unjustly, from the remarks of the gentleman from Baltimore [Mr. Suppiee] that he labored under the impression that there was a feeling of hostility among the members of this board to the interests of railways. If it was his intention to convey that idea, I desire that it should not go unchallenged, for I am unaware that there is any such feeling on the part of any delegate here. I believe that every member of this board and the community at large fully appreciates what the railroads have done for the country. That they have very materially aided in developing the West I think I know. That they have had great encouragement to do that I also think I know. In my opinion—and I believe I have had some opportunities of forming an opinion—there is not a better railroad service in the world than we have in the United States. I think there is no other nation that gives equal facilities for travel for the same money. I do not believe that freight is anywhere carried as cheaply by rail as it is in this country on the great trunk-lines. But the question with the community is not whether freights are cheap or dear for the kind of service performed. The question in the West is, I think, whether they are the cheapest possible. If they are not the cheapest possible we believe that the producers of the country are entitled to something further. That is all there is to it. There is no hostility to railroads as railroads.

Mr. THURBER, of New York. I should just like to say a word on one or two of the points which have been made. I consider that Mr. Bacon and Mr. Higgins have brought out a very important point in calling attention to the section which says that all rates shall be reasonable. As I said in the beginning, I was prepared to have exceptions in a provision like that of section 4, so that it should be made sufficiently elastic for the railroads.

But at the same time there are two sides, as stated by Mr. Pope, to this question, and I think when this bill comes before Congress you will see that certain members will want some provision of this sort.

Take, for instance, the proposition that it is unreasonable to require a road to carry at the same rate for short distances as for long distances. Everybody will say at once that that is unreasonable. But to say that a road shall charge more for carrying, say 250 miles, than it charges for carrying a thousand miles, is another question. It is a question of degree to a very great extent. There are two sides, undoubtedly, to that question. This committee has given to the bill careful consideration. There are other points that, if time permitted, I should like to dwell upon, but I will not do so, and will only say that I am prepared to adopt this report.

Mr. MCLAREN, of Milwaukee. Mr. President, I want to give my hearty thanks to the committee who have so very carefully and thoroughly considered this question and reported to us. I know that they have done so at a great expenditure of time and thought. They have given time and labor that no other delegates have given, and in the result of these labors every member of this board must be deeply interested. At the same time I almost envy these gentlemen the privilege they have had of considering this question so fully in all its bearings, and especially in its bearings upon the bill which has been reported in Congress.

We have had placed in our hands a bill of twenty-one pages, and we have heard read a synopsis of that bill, making its provisions very clear and distinct. Now, Mr. President, I am not afraid, as a member of this board, and never have been, to vote for a particular bill or question in detail. But I do not want to see this board vote for anything until it thoroughly understands it, although I should like an expression of the opinion of the board this morning. I consider it utterly impossible, however, for us to properly consider a bill of twenty-one pages in length in the three hours before the absolute close of our meeting. If this bill were brought up in the shape expressed in the first section I should be prepared to vote most heartily for it.

Mr. HIGGINS. The bill does nothing more.

Mr. MCLAREN. I have not been able to read the bill; I have only glanced at it sufficiently to see that there are some things in it that I very seriously question. There are certainly some changes I should like to suggest before indorsing the bill. Still, I have been very glad to see that the board has taken a step in advance of its previous action on this subject. The board has several times decidedly indorsed the opinion that a commission ought to be appointed to regulate this whole question. Last year the board adopted a proposition that came from the New York Board of Trade and Transportation, as follows:

"*Resolved*, That Congress should, without delay, enact a law for the regulation of interstate commerce; that acknowledged wrongs should be prohibited, and remedies provided so simple and practicable that the individual citizen in any part of the country may avail himself of them; that a national board of railroad commissioners should also be established as an executive and supervisory body to study the transportation problem and see that the laws relating thereto are complied with." (Proceedings of 1885, page 68.)

That whole question was referred to a committee of five, who were instructed to report at the next meeting of the board, or to the executive council. I do not understand that that committee has made any report, either to the executive council or to the board. It seems to me, Mr. President, that, at the expense of a year's delay in this matter, it would be wisdom in us to wait and see that we are sure before we take any such definite and minute action as is proposed to us now. I should like the subject to have such consideration as could only be given by weeks and months of thought and investigation. Let us take the resolutions to our respective boards of trade for them to consider; and let us consider them, and when we send our delegates here another year we shall have some thoughtful, careful, well-advised, fully considered expressions of opinion to make upon this very important subject.

Mr. POPE. This committee, I beg to assure you in advance, will not feel personally aggrieved or affronted with any disposition whatever that you may choose to make of the report. We are but your servants. I desire to say, however, that I think it is my duty, as a member of the committee, to correct some misapprehensions that seem to exist in regard to this measure. As to what Mr. McLaren has said, from the report of last year, and also from the action that has been taken by this national board during the four years that it has been my pleasure to be a delegate, we have, from time to time, in the plainest terms, recommended the appointment of a national commission for the control or regulation, or at least for the consideration, of this whole question of interstate commerce. We are on record two, three, or four times on that subject, and at our last session we passed the following:

"*Resolved*, That Congress should, without delay, enact a law for the regulation of interstate commerce; that acknowledged wrongs should be prohibited, and remedies provided so simple and practicable that the individual citizen in any part of the country can avail himself of them"—

and recommending finally the appointment of a commission. There seems to be a misapprehension about the bill. It is proposed to do just what Mr. McLaren, to my certain knowledge, has voted for year by year. If this bill were designed to regulate railways, I for one should oppose it. I have never been an agitator; I have always been a friend of railroads. I will not say that I have never been an agitator, but I have never been a contestant in the sense in which Mr. Bacon has been, and I thank him, and also Mr. Thurber, for what they have done. I am to-day friendly to railroads. This bill proposes to do nothing more than has been recommended by this board from time to time; it does not propose to regulate railway rates at all.

Our report states that it is to be commended as much for what it does not undertake to accomplish—all attempts to fix arbitrary rates being avoided—as for the provision it makes for a national commission. The bill simply provides for a commission, and then for the hearing of complaints, and then for the methods of procedure. I can assure gentlemen that that is all there is in it. My friend Mr. Holton has a wrong impression if he thinks that a man would have to come a thousand miles to Washington in order to have his complaint heard. The bill provides for the certification of that complaint by the United States district court for the district in which such violation of law has occurred. It provides further that if you make a successful prosecution of the complaint the defendant shall refund to you all costs to which you have been put, together with your counsel fees, &c. If you are unsuccessful, then the cost is borne by the United States. The commission, under the proposed bill, does not necessarily have to sit at Washington all the time, but may hold sessions at any place in the United States.

Mr. Higgins, in referring to the Congressional report, said we had not had time to read it. I desire to correct any wrong impression that may have been left on your minds to the effect that we did not read the bill which followed the report; we did read it most thoroughly. I desire you to bear in mind the distinction between the report and the bill. The report of the testimony that accompanies the bill covers two hundred and sixteen pages of printed matter, and even that we have gone through pretty well. The report is printed under the title "National commission; its establishment recommended for the enforcement of legislative provisions."

Mr. Albert Fink and Mr. Charles Francis Adams, president of the Union Pacific Railroad, are some of the men who testified before that committee upon the railroad side of the question. Upon the opposite side, those favoring a commission are almost counted by the legion—such men as ex-Governor Claflin, of Massachusetts; Mr. Richards, of New York; Mr. Bogue, of Chicago; Robert Elliott, one of the ablest men upon railroad matters anywhere; Mr. Clark, of Philadelphia; Mr. Medill, of Iowa; Mr. Dalrymple, and Mr. Deane. All these gentlemen gave their testimony as to the appointment of a commission. You can not appoint a commission without some law, can you? Mr. McLaren wants a commission, but he wants the appointment put off. Can you ever get a commission appointed without a law which will in the first place enable the members to draw their salary and providing methods of procedure and for the hearing of complaints? That is all that this bill proposes to do. With this explanation, I leave it entirely at the disposal of the board.

Mr. MCLAREN. I desire to offer a resolution. My friend, Mr. Pope, has stated that I was in sympathy with the proposition that a commission should be appointed. He stated that quite correctly. I am on record in the proceedings of the National Board of Trade upon that question. I accept Mr. Pope's statement as to the scope of this bill, but I do not like the idea of voting on twenty-one closely printed pages without knowing myself what they are; I want to read and judge for myself. As I said before, I have seen some things in it that I do not quite like, and there are also some things not in it that I should desire to insert. I wish now to move the adoption of this resolution:

"*Resolved*, That the report presented, and the whole subject under consideration, be referred again to the committee, with instructions to report again to the executive council, at least sixty days before the next annual meeting; and that the council be asked to present said further report at once to the constituent bodies, asking them to specially consider the conclusions and recommendations presented, in order that the delegates to the next annual meeting may be prepared for a careful and intelligent discussion of the report, and for action thereon."

Mr. BACON, of Milwaukee. Before this question is put I wish to answer briefly one or two objections that have been made. I wish to say, in the first place, that this bill which is now before the Senate is the result of years of study on the part of the Senate committee by whom it was introduced, and that that Senate committee supplemented those years of study with six months of personal interviews with railroad managers and business men who have had to do with the transportation of freight through all this country, by holding sittings at the principal cities. This report is now brought before Congress as a result of all that labor and careful study on their part for action. The bill is to a certain extent what might be termed, perhaps, a competitor of the Reagan bill. But the projectors of the Reagan bill have not had the advantage of this information and this communication with the public upon the subject as the Senate committee have. I know that the Senate committee would be greatly sustained and helped toward the passage of that bill through the Senate by the indorsement of this national board, and I feel that this subject has been long enough before this board for it to act upon it deliberately and with proper weight.

In regard to the additions referred to by Mr. McLaren as being desirable, I want to say that in looking through the bill I have been surprised to find some things omitted that I supposed would be in it. But it has been presented by the committee merely as an initiatory measure, the committee evidently having come to the conclusion that it would only recommend such legislation as it is thoroughly satisfied with as the result of its investigations of the demands and requirements of the country, and that further legislation should be left for consideration and recommendation by the commission to be established by the bill as proposed, in the performance of its duties.

As has been stated, the bill simply comprises these points, providing means

by which they can be carried out: That reasonable and just rates shall be established and maintained; that the public shall have the right of appeal to the commission for alleged wrongs done; that in case of failure in sustaining any complaint the United States bears the expense incident to the decision of the matter. Its purpose is to give to the citizens of the United States an opportunity of remedying any evils to which they are subject, without requiring them to retain counsel, costing vast sums of money, to contend against counsel who are under annual pay from the railroad companies, and without requiring them to follow their cases from one court to another until they reach the court of last resort.

Everybody knows that it is the habit of the railroad companies to resist complaints until parties are worn out, and everybody knows that a contest with a railroad company is a serious thing. My colleague from Milwaukee has referred to the contest we have been having in Wisconsin. Now, while I regret that that has been referred to, I will say in reference to it that I have been told by a number of my friends that they could not see why I should undertake to bear the obloquy and self-sacrifice involved in initiating and maintaining such a contest. But I felt that there were rights to be maintained, and I did it from a sense of duty. But a thousand will shrink from such a duty where one will perform it. This commission opens to every individual a prompt redress for every such wrong, and free of expense, the prosecution to be carried on by experienced persons appointed by the Government.

This commission is simply a supplement, as it were, to the State commissions, and it will be so in fact, if established.

State commissions have jurisdiction only over questions that originate and terminate within the territory of the respective States; that has been decided by the courts. It was decided in the recent case of Joy vs. The Wabash and Saint Louis Road, by the supreme court of Illinois. That case related to transportation from a point in that State to the city of New York, and the State court ruled that because the party charged with that transportation resided in the State of Wisconsin the court had no jurisdiction of the case. The company appealed to the Supreme Court of the United States two years ago, and the case is there yet. The company refuses redress, and the complainant is obliged to await the long processes of the law and to bear the immense expense incident thereto in order to sustain a point which perhaps does not concern him more than to the extent of $100. This commission is to do for the public at large what each individual needs to do for himself but can not do.

I want to say in this connection that in the States where commissions have been established their workings have been satisfactory, not only to the public but to the railroads. I have had somewhat to do with the Illinois commission, Milwaukee being so near the boundary of that State, and our business so interlaced with that of the State of Illinois. I have had a great deal to do with the management of railroads in that State, and I believe there is not a railroad manager in that State to-day that would have the commission abolished if he could. And I want to say that the commission is regarded not only as the representative of the people to defend and protect their rights, but also as the representative and protector of the railroads. Last summer the citizens of the State of Illinois made a demand upon the several railroad companies, in consequence of the low price of corn, for a further reduction in freight rates on that commodity, and that demand was proclaimed throughout the State.

The newspapers took it up, and a tremendous clamor was made in relation to it, and a demand was made upon the commissioners, evidently with the expectation that by making a loud noise the object desired would at once be accomplished. The commissioners took up the matter calmly, laid it before the managers of the railroads, called a convention of railroad managers for the purpose of consultation, heard the railroad side of the case, took the whole subject under consideration afterward privately, and finally made a report to the people that they were satisfied that the rates then charged were equitable and just, and that the railroad companies could not afford to make any reduction.

In this connection I want to quote a passage that appears in the report of the Illinois commission for the year 1884, which shows the practical workings of the law in that State, and which, as I claim, would illustrate the practical working of an United States commission with reference to interstate commerce:

"Thirteen years ago this commission was established, and for many years struggled to obtain that recognition to which it was entitled by law; and now, after the highest legal tribunals have affirmed the great powers conferred thereon, all the railroads doing business in the State comply with the requirements and decisions of the commission on the various questions connected with the great problems of transportation. The inclination now apparent in railroad management to avoid prosecutions and to foster friendly relations with the public, demonstrates the wisdom and efficiency of the present system of State control of corporate interests."

Mr. NELSON, of Chicago: This is one of the few subjects, Mr. Chairman and gentlemen, which I think I know something about. I have not taken up the time of this meeting to any great extent, and I had hoped and intended to avoid doing so to-day. But I am surprised to hear Mr. McLaren and others say what they have said, after the study we have given to this question in the National Board of Trade. I doubt very much if ever in the history of this board in the future we get another so able a report and so able an examination of this subject as we now have before us from this committee. I really hope that we shall not admit to Congress or to the country that we have been studying this question as long as we have and yet to-day are not able to decide upon it. If that is the state of our minds to-day, how or what or why we should ever hope or expect anything from Congressmen in the way of legislation I can not understand.

We have been studying this question for years. We have had these State laws before us, and have been informed as to the workings of the State commissions; and still we seem inclined—even the horny-handed granger from Wisconsin, raising crops in Wall street [laughter] still seems to be inclined to the opinion that the question as to this country and this nation (with a big N) has not been settled. I supposed it was settled years ago, and I thoroughly believe it was. I move, Mr. Chairman, to lay the motion of Mr. McLaren on the table.

The motion was seconded.

The PRESIDENT. The motion of Mr. Nelson is to lay the resolution of Mr. McLaren on the table. That does not admit of debate. The secretary will read the resolution.

The secretary read the pending resolution.

The PRESIDENT. There can be no debate upon the motion to lay upon the table.

A division was called for, which resulted in 21 ayes to 8 noes.

So the resolution was laid upon the table.

The question recurred upon the adoption of the report of the committee with the resolutions attached thereto. A division was demanded; which resulted in 22 ayes to 8 noes.

The PRESIDENT. The resolution is agreed to by more than the requisite two-thirds majority.

As the minority report of the Committee on Commerce on the Reagan bill states the situation very clearly I give it in full as part of my remarks:

The minority, never for one moment seeking to depreciate the importance of enacting a law upon the subject of interstate commerce, but believing that wise and well-digested legislation will be gladly accepted by the people and by the railroad companies engaged in transportation between the States and between the United States and adjacent foreign countries, have looked with due deliberation upon this matter as one equally as grave as any pending before Congress.

The interstate commerce of the country, which it is proposed to supervise and regulate, now passes over more than 125,000 miles of railway, representing an investment approaching $8,000,000,000, upon which during the year 1884 nearly 350,000,000 passengers and nearly 400,000,000 tons of freight were carried, while during the same period transporters upon water ways, natural and artificial, in most instances competitors of the railways, carried less tons of freight and fewer passengers; yet their proportion was very large.

While it is remembered that a large portion of this freight and passenger traffic will be directly affected by the provisions of the proposed bill, usually designated as the Reagan bill, it should be borne in mind that the interstate freight traffic carried over the railroads of the United States is composed largely of products coming in direct competition with the products of foreign countries. The American railways having to meet these products in the markets of the world upon equal terms, it can readily be seen that the question of regulating the rates upon that freight traffic is a most serious one. The cost of transportation directly affects the price at which the citizen of the United States is enabled to place his products in those common markets, and any unwise restriction or regulation may render it impossible for him to meet his competitors on even terms, and may thus seriously cripple many of the leading industries of our country.

It will be seen at a glance that cotton, coal, wheat, provisions and breadstuffs of all kinds, and generally all commercial and agricultural products, form the great bulk of the interstate commerce of the country, and it is universally conceded that through the system pursued by the railways in the past these industries have been extensively developed, and the United States brought into a position where a very large portion of its debt has been paid off and its prosperity enormously increased. That this could not have been accomplished except for the extraordinary reductions made by the railways in their rates upon traffic, which reductions have enabled the products of the most distant portions of our country to be transported by rail to the seaboard and thence by water to foreign countries, must be very clear. Certainly no serious ground of complaint can exist when figures show that in the last thirteen years the rates upon traffic have gradually been reduced from about 2½ cents per ton per mile to about 7 mills, and when dividends and interest upon the capital invested in railways during the year 1884 did not exceed 3½ per cent.

It can readily be seen how, in the management of so enormous a traffic, it is absolutely necessary that there should be entire flexibility in the adjustment of rates to meet the varying circumstances presented, and it is not believed that any "cast-iron" rules can be laid down for the regulation of this enormous traffic without seriously interfering with it and directly and vitally affecting the prosperity of the country.

The minority of the committee, therefore, have not favored the insertion of the provision preventing, under all circumstances, the granting of drawbacks or rebates, because cases were cited before the Committee on Commerce, in hearings, in which drawbacks or rebates were absolutely necessary to enable the domestic shipper to meet his foreign competitor on equal terms; always, however, in the opinion of the minority, having the system of drawbacks or rebates open to all under similar conditions and circumstances.

Nor do the minority favor the provision prohibiting a greater charge for a shorter than a longer haul, as it was shown to a satisfactory degree, as we think, in the hearings, that where two competing points were connected by water as well as rail, it was impossible for the railways to secure the traffic unless they made their rates as low as the water rates, and that while they might be able to do this on a portion of their traffic, it would be destructive of their interests to reduce all their rates to those which were forced upon them between certain points by the competition of the water routes. The minority consider that in this, also, unjust discrimination should never be made, but that the idea of charging the same rate for the haul under similar conditions and circumstances should be adhered to.

The minority also differ from the majority upon the subject of "pooling." They believe its absolute prohibition is unnecessary. There should be legislation imposing restrictive provisions, for shippers should not be placed at a disadvantage or competition in freight charges lessened so that transporters only should be benefited. If fairly carried out and not done by secret and private arrangement, if resorted to for the purpose of preventing what is called injudicious "cutting down" of rates, so that reasonable and just charges should be permanently adhered to, are the means by which transporters endeavor, or ought to endeavor, to secure fair rates upon the traffic which they carry, "pooling" would not be open to many of the objections made to it.

Past experience in railway transportation has satisfied transporters that the "pool" is the nearest and fairest device yet used to enable them to place shippers upon an equality and prevent grievous discrimination in favor of the large shippers as against the smaller ones.

But we appreciate the difficulty of satisfactorily legislating upon this subject, and would prefer to leave it to the consideration of a board of interstate-commerce commission, which tribunal we hope will be created. So much for what the minority suggest as to the drawback or rebate, the longer and shorter haul, and the "pooling" systems. Proper notification of the changing of rates, with the limitation of a reasonable time, publicly posted in stations judiciously selected in accordance with the amount of freight offered, upon an equitable annual average, might also be conducive of confidence of the shipper in the transporter. A carefully digested section might be incorporated in the law to meet this point.

The conclusion of the minority is, however, unfavorable to positive legislation other than the above suggested, believing that it is impossible for Congress, limited necessarily in practical knowledge of railway movements, prejudiced perhaps against the railway system by some local disagreement not yet settled, led to think that an occasional instance of what appears to be unfair dealing with the shipper is the transporter's general course, and beg leave to suggest that the most available present remedy for imaginary as well as real grievances is the creation by law of a board of interstate-commerce commission.

It is the province of legislators to ascertain by intelligent experience the legislation required, and that experience can best be secured through the proposed commission. It should be a permanently established bureau of an appropriate department; should be composed of the ablest men of the country; salaries should be large enough to attract men from the very highest and most lucrative positions of the varied business life of our citizens. This board should have power to investigate all complaints connected with the management of interstate commerce; power to secure their redress through the voluntary action of transporters or through legal proceedings instituted by it through the proper legal officers of the United States.

We desire to impress the House with our implicit belief in the present advantage of a board of interstate-commerce commissioners. We ask you to defer radical legislation until we have tried the commission, which, with powers to hear grievances, will also be required to report annually to Congress, and to suggest from time to time the legislation necessary to create harmony between shippers and transporters.

All which we submit.

CHAS. O'NEILL.
ROBERT T. DAVIS.
RANSOM W. DUNHAM.
FREDERICK A. JOHNSON.

In conclusion let me say the people demand legislation, but the business interests generally unite for a commission.

The Reagan bill is too sweeping in its requirements. If enacted into law it would, in the opinion of many of our wisest commercial and financial citizens, work more harm than good. Especially would the West be crippled in sending its products to the seaboard, for through rates would have to give way to local rates.

Gentlemen, give us the commission bill.

Oleomargarine.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 28, 1886.

The House being in Committee of the Whole on the state of the Union on the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. McMILLIN said:

Mr. CHAIRMAN: We are seeking here to enter upon a new field of legislation in the name of agriculture and for the protection of agriculture.

From every part of this country where internal-revenue laws are enforced have come complaints against the method of their enforcement and against their unnecessary rigor. From Virginia, from North Carolina, from my own State, from Kentucky have come complaints against the tyranny and oppression of Federal courts. There is hardly a man within the sound of my voice who represents a rural district whose constituents have not at some time or other within the last twenty-five years been placed under the wheels of that Juggernaut. Agents for the enforcement of those laws have gone to the hills and hollows, to the highways and byways, and even to our cellars to smell around for bungs of whisky barrels and to arrest those charged with violating internal-revenue laws. Men have been dragged hundreds of miles charged with selling a twist or armful of tobacco. The annoyance to farmers engaged in tobacco raising has been intense.

But not content with that, in the name of agriculture it is proposed now to turn internal-revenue officers loose in the pantry; to have them inspecting the quality of butter our families use, and if it does not have the regulation taste and smell who can tell but that ere long that immense throng moving to Federal courts charged with violating the whisky law and the tobacco law will be swelled by those offending against the oleomargarine law?

Mr. Chairman, I would be glad to vote for a proper relief measure for the benefit of dairymen, but I will be compelled to vote against this bill if not amended. Look at the eleventh section:

Packages, each containing not less than 10 pounds, as prescribed in this act for oleomargarine manufactured in the United States before the stamps are affixed; and the owner or importer of such oleomargarine shall be liable to all, &c.

It provides for spies and informers, and gives them a part of the penalty incurred and recovered. This commodity is guilty of an offense, and finable to the extent of $50. Where is the penalty enforced? In his county court? No. In his circuit court? No. But he is to be dragged, in all probability, 100 or 200 miles to a Federal court, to dance attendance for twenty days, and then to be sent off if found guilty to a Federal prison.

All the gentlemen who have spoken upon this question, both in favor of the bill and against it, have said it is impossible for the best article of oleomargarine to be detected from a second-class of butter, except by an expert or chemical analysis. And yet you fix it so that any laboring man purchasing it, who lives in a city and does not know the difference between butter and oleomargarine, is liable to have his pantry visited and his butter or oleomargarine subjected to an analysis that will land him in a Federal prison. Is the House ready to enact such a law as that?

When the manufacturers of the best articles of cloth come here and say that the manufacture of shoddy is injuring their industry are you going to put your hand on that article? When manufacturers of morocco come and complain because the manufacturers of imitations of morocco are injuring them do you propose to interfere for their protection? Do you propose to go out into all that unknown region of legislation, where the patriots and statesmen of this country have supposed men had sense to take care of themselves, and will you undertake to take care of everybody by your legislation? Is this to become a paternal government, pretending to protect everybody and yet oppressing all? If so, what will be the result? Your Congress will dwindle down from what it should be—a legislator for the masses of the people under wise and wholesome laws—into making a puerile and futile effort to protect every man, and you will protect none.

I believe in that government which lets the people govern themselves so far as they can. What they can not do in their individual capacity let the States do, and then what neither the individual nor the State can do let the Government of the United States, so far as it can under the Constitution, do. There is none who will go further than I to force the manufacturers or sellers of this commodity to manufacture and sell it for what it is in the Territories and District of Columbia. If I were in a State Legislature I should vote for the most ultra measures requiring producers of this oleomargarine to label it as oleomargarine. I would do everything to prevent a fraud in its sale. But when you come to laying the hand of the Government upon it to tax it out of existence you have entered upon an experiment that can only end in disaster. Who will come next to ask us to legislate against butter?

[Here the hammer fell.]

Mr. MCADOO was recognized and yielded ten minutes to Mr. McMILLIN.

Mr. McMILLIN. I thank my friend from New Jersey. Now, Mr. Chairman, the founder of the Democratic party promulgated some of his wisest sayings against the encroachments of the Federal courts. As early as 1821 Jefferson wrote to Livingston saying in substance: "The great object of my apprehension is the Federal courts. They are stealing out over the fields of jurisdiction like a thief in the night. They begin in the day and at night they hold the conquests of the day, until we can hardly claim that we have within the States an exclusive jurisdiction that Federal power can not tamper with." The gentleman from Virginia [Mr. O'FERRALL] the other day raised his voice in favor of this bill, although he has witnessed the sad spectacle of a Federal judge in that grand old State going into a State court and dictating to a State judge what sort of jurors he should have to try State criminals. Yet now it is proposed to extend the jurisdiction of this already too powerful body, the Federal judiciary.

What more? Not content with placing the administration of our revenue laws (which was unavoidable under the system) in the hands of the Federal judiciary, we propose to add enormously to their power. It was bad enough to see them invested with power to authorize the plaintiff in an action, after he had gone into a State court, to remove his cause into a Federal tribunal, but we have seen not merely this; we have seen, as I have said, Federal judges dictating to a State judge what sort of jurors he should have to try parties arraigned for offenses against State laws.

Is this House ready to go still further and not only send these Federal officials to the polls, but send them into the dining rooms of the people and into their dairies, to arrest them and carry them off for trial before a Federal court? I do hope that that spectacle will not be presented. I hope that if this bill is to pass it will be limited to the territory over which the United States has jurisdiction, and that it will not go beyond the extent of wise legislation. For all of that I would vote.

I had occasion once to examine the encroachment of Federal authority upon the rights of the people and of the State courts, and made a speech against that encroachment on the bill which sought to limit the jurisdiction, and from that I make the following extract:

Mr. Speaker, I have said that unwarranted encroachments have been made upon the State courts by Federal tribunals. We have only to look at the United States statutes and the judicial construction of them for painful proof of this fact. Let us first examine the law as to civil cases. By the judiciary act of 1789, Revised Statutes, section 639, subsection 1, it is provided that—

"When the suit is against an alien or is by a citizen of the State wherein it is brought and against a citizen of another State, it may be removed on the petition of such defendant filed in such State court at the time of entering his appearance in such State court."

It will be observed that before the cause could be removed under this act the party removing must be a defendant, must also be an alien or a non-resident of the State in which the cause is pending, and must make his application for removal at the time of entering his appearance. These requirements tended to restrict the jurisdiction of the Federal courts. But in 1866

CONGRESS LIFTED THE FLOOD-GATES,

and since that a tide of litigation sufficient to arouse the gravest apprehension has flowed continuously into the United States courts. By the act of 1866 aliens and citizens of other States than that in which the suit was brought are authorized to divide the suit under certain circumstances, removing a portion to the United States courts and leaving it as to part of the defendants in the State courts, a thing unheard of in former times, and an innovation which should never have been tolerated.

The next step taken to degrade the State courts was the act of 1869, which authorized either the plaintiff or the defendant to remove the cause, and at any time before final hearing. In other words, a party might select his court, and commence his suit therein, and after experimenting he might turn his back upon the forum of his choice, and upon his own petition have the cause removed to the United States courts, and there still further harass his victim, till, from exhaustion or want of means to defend his rights, he yielded the matter in controversy. What justice is there in allowing the party bringing a suit to abandon and fly from the forum of his choice? What justice in permitting him to vex his victim by requiring him to dance attendance on every court known to our complex system?

THE FEDERAL COURT TAKES JURISDICTION OF THE NAVIGABLE RIVERS.

What more? The Federal judiciary have not only had their jurisdiction extended over the lands of the United States, but over the waters also. In the earlier history of our Government, the Federal court assumed jurisdiction over the waters only so far as tide water extended. But in this, as in everything else, the jurisdiction of these courts has been enlarged till it extends now over

all of our navigable rivers. It is true that thus far the courts have only exercised jurisdiction of civil causes on the water courses; but how long will it be, at their present rate, till they take jurisdiction of crimes committed there?

THE CIVIL RIGHTS BILL

was passed and jurisdiction given to the United States courts of causes arising under it, without any regard to whether the parties to the suit were citizens of the same or of different States, and without any limitation of time within which the application for transfer shall be made. By this legislation, for the first time in the history of this or, so far as I know, any other country, the complexion of the suitor determined the court that should administer justice to him, and we had established one court for one color and a different tribunal for the other, when all the parties were citizens with equal rights and privileges under the Constitution.

THE FEDERAL COURT ASSUMES CONTROL OF GUARDIANS.

Mr. Speaker, this all-pervading Federal judiciary, by virtue of section 5486, assumes the right to go into our county courts under certain circumstances, take the ward's guardian therefrom, and carry him to the Federal court to be tried for not discharging the duties of his trust. The section is in these words:

"If any guardian having the charge and custody of the pension of his ward shall embezzle the same in violation of his trust, or fraudulently convert the same to his own use, he shall be punished by fine not exceeding $2,000, or imprisonment at hard labor for a term not exceeding five years, or both, at the discretion of the court."

Is any man deluded enough to suppose that the founders of the Republic ever anticipated that this authority would be claimed by the Government or be yielded by the States? If because the money came from the Government as a pension the Government may follow up and punish the custodian for embezzlement, why may it not for the same reason follow it for all purposes and control the ward, guardian, and fund to the exclusion of the county courts of the States? If this assumption of authority goes unchallenged, who can tell but that ere long we shall have the General Government, through its judiciary, directing where the ward shall live, how much shall be paid for support, supervising settlements, directing the investment of the fund, and determining who shall inherit upon the death of the ward?

REMOVAL OF CAUSES BY CORPORATIONS.

But, Mr. Speaker, as if not content while a vestige of exclusive jurisdiction remained to the States, Congress in its wild career went further and provided that corporations and individual members of corporations organized under the laws of the United States might remove their causes from the State to the Federal court. This change is made by section 640 of the Revised Statutes, which is as follows:

"Any suit commenced in any court other than a circuit or district court of the United States against any corporation other than a banking corporation organized under a law of the United States or against any member thereof, as such member, for any alleged liability of such corporation, or of such member as a member thereof, may be removed for trial in the circuit court for the district where such suit is pending," &c.

As to corporations organized under the laws of any State, the courts have held that the residence of all of the persons owning or controlling the corporation within the State where the suit is instituted makes no difference. They are still entitled to the removal if the corporation was organized out of the State. Nor will the court hear evidence upon the question of residence of the individuals composing the corporation.

We have reached a point where the citizen is almost powerless in a litigated contest with an immense corporation, and yet we give foreign corporations, or those that are not wholly within a single State, an advantage over the resident citizen in the right to remove the cause to a distant court. Without the people, through their representatives, rise in their legal might and check them, I fear that the day is not far distant when individual property and constitutional liberty may both give way in the unequal contest. Let us take

RAILROAD CORPORATIONS

for an example. They are allowed the full protection of the law along their lines, as is the citizen, which is right. They even have the privilege of charging the resident on the line more per mile for carrying his freight than is charged for carrying freight the full length of the line. But when the citizen conceives himself aggrieved and sues he may find himself suddenly carried into the Federal court, to wait for years and expend much in costs before he gets justice administered. Year after year the people pour out their treasures and build new roads, and year by year larger corporations swallow them up at reduced prices. They never die. If a small road ceases to exist under its charter name, it is only to begin a state of immortality as a branch of a large corporation.

Daniel Webster and the Baltimore and Ohio road were in Washington together. The great constitutional lawyer has been gathered to his fathers a quarter of a century, but the corporation which bore him to "the Monumental City" is yet in its infancy, and only strengthened by the years which have elapsed. When another century shall have passed, and the United States teem with two hundred millions of people, these roads will be more active and powerful than to-day by the increase of commerce from an increase of population.

Men may come and men may go,
But they flow on forever.

Where is the necessity for extending superior advantages to those so able to take care of themselves and so able to crush out the individual? Let favoritism for them cease. Let those who build or support corporations be placed on an equality before the law with them. Let corporations be subject to the judicial authority of the State where they do business. If there is no conflict between the citizen and the corporation, no injury can result from this course. If there is a conflict, let us give the people an equal chance in that conflict.

INSURANCE COMPANIES FREED FROM THEIR AGREEMENTS.

To illustrate the maternal care with which our Federal system hovers over and protects corporations, let us look to the decisions of the courts concerning them. An act was passed by the Legislature of Wisconsin in 1870 providing—

"That any fire insurance company, association, or partnership incorporated by or organized under the laws of any other State of the United States, desiring to transact any such business as aforesaid by any agent or agents in this State, shall first appoint an attorney in this State, on whom process of law can be served, containing an agreement that such company will not remove the suit for trial into the United States circuit court or Federal courts, and file in the office of the secretary of state a written instrument, duly signed and sealed, certifying such appointment, which shall continue until another attorney is substituted."

This statute being in force, the Home Insurance Company of New York, a corporation organized under the laws of the State of New York, established an agency in Wisconsin, complying with the requirements of the act quoted, and agreeing as follows:

"And said company agrees that suits commenced in the State courts of Wisconsin shall not be removed by the acts of said company into the United States circuit or Federal courts."

The Supreme Court of the United States, in the case of the Insurance Company vs. Moss, 20 Wallace, 445, have held that notwithstanding this State statute, notwithstanding the solemn agreement of the corporation to the contrary, it may remove the suit to the United States court. The same has been held in the case of the Hartford Fire Insurance Company vs. Doyle, reported in 3 Central Law Journal, 41.

It is not my purpose to enter into any argument concerning the soundness of these decisions. It is sufficient for us to know that they stand. They are a barrier over which no State Legislature or State constitution can pass and take hold of corporations. The people, after years of patient, hopeful, but unavailing forbearance, cry out for relief. There is but one tribunal on earth which can give it to them, and that is the Congress of the United States. I hope that this, their only city of refuge, will not close its gates against them. They ask nothing more than to be placed on an equality before the courts with corporations, and nothing less should be accorded them.

Congress can not, and should not attempt to, interfere with the rightful and constitutional jurisdiction of the Supreme Court. There are also some classes of cases which are properly triable in the inferior United States courts. But Congress may regulate the jurisdiction and practice of such inferior courts, and should do so to the extent of relieving us of the hardships which the present system entails.

CRIMINAL JURISDICTION OF THESE COURTS.

The evil does not stop with civil causes. Congress has, by various acts which I will not delay the House by reading, given the district and circuit courts of the United States jurisdiction to remove criminal causes thereto which arise in the State courts against internal-revenue officers and their assistants for offenses committed by them against the State laws. The gentleman from Indiana [Mr. Orth], in a speech delivered here on this subject, defends the right and propriety of the giving of this jurisdiction to the inferior courts of the United States, and says:

"Such jurisdiction of both civil and criminal cases carries with it as an inseparable incident the laws of the State, so far as applicable and necessary, from whose courts such transfer has been made."

I insist that this is not in harmony with the genius of our institutions, is not consistent with reason or sound policy, and is in direct conflict with the law as decided by the Supreme Court of the United States. In proof of this position I read from the case of the United States vs. Hudson and Goodwin, 7 Cranch Reports:

"The powers of the General Government are made up of concessions from the several States. Whatever is not expressly given to the former the latter expressly reserve. The judicial power of the United States is a constituent part of these concessions. That power is to be exercised by courts organized for the purpose and brought into existence by an effort of the legislative power of the Union. Of all the courts which the United States may under their general powers constitute, one only—the Supreme Court—possesses jurisdiction derived immediately from the Constitution, and of which the legislative power can not deprive it.

"All other courts created by the General Government possess no jurisdiction but what is given them by the power which created them, and can be vested with none but what the power which ceded to the General Government will authorize them to confer. * * * The legislative authority of the Union must first make an act a crime, affix a punishment to it, and declare the court that shall have jurisdiction of the offense. * * * Certain implied powers must necessarily result to our courts of justice from the nature of their institution, but jurisdiction of crimes against the State is not among these powers. * * * To fine for contempt, &c., * * * are powers which can not be dispensed with in a court; but all exercise of criminal jurisdiction in common-law cases we are of opinion is not within their implied powers."

This case is cited and approved in the case of The United States vs. Cooledge *et al.*, 1 Wheaton, 415:

"In the case of The United States vs. Burr, which arose in the circuit court of Virginia in 1807, the Chief-Justice of the United States declared that the laws of the several States could not be regarded as rules of decision in trials for offenses against the United States, because no man could be condemned or prosecuted in the Federal court on a statute law."—*Kent's Commentaries*, volume 1, section 334.

Further:

"The great difficulty and danger is in leaving it to the courts to say what is an offense against the United States when the law has not sufficiently defined it. The safer course undoubtedly is to confine the jurisdiction in criminal cases to statute offenses duly defined and to cases within the express jurisdiction given by the Constitution."—*Kent's Commentaries*, volume 1, section 341.

Under these authorities the district and circuit courts of the United States can not convict its officers after their causes are removed, Congress having never made their "act a crime" or "affixed a punishment to it." No such authority can result by mere implication. Life is not taken nor liberty destroyed in any such slip-shod way by implication and resultant criminal jurisdiction. And as these courts have no power to punish, they become merely tribunals to turn loose those who are charged with high crimes.

I presume it is not the purpose of any one to go back and change the mode of disposing of cases which are founded upon difficulties that occurred fifteen or twenty years ago. But for offenses committed recently, in times of profound peace, every man should be amenable to the law he has violated and to the tribunal authorized to vindicate that law.

The gentleman from Indiana [Mr. Orth] also says of a bill now before the House for the restriction of inferior Federal courts:

"But it goes further, and repeals all laws transferring criminal cases from the State to the Federal courts. That would be the effect of the law if passed."

The same position has been assumed by others who have spoken in opposition to this bill.

Mr. Speaker, no such consequence flows from the legislation proposed in this Congress. A complete, ay, the best, remedy for the transfer of all causes containing a Federal ingredient, or against parties on account of any act done as officers or representatives of the Government, is left. Section 709 of the Revised Statutes is not touched by the legislation, and provides for a transfer to the highest court in our Republic. I send it to the Clerk to be read, that members may see that we are not attempting any inroad upon constitutional rights nor to leave officers of the Government without an impartial hearing.

The Clerk read as follows:

"A final judgment or decree in any suit in the highest court of the State in which a decision in the suit could be had, where is drawn in question the validity of a treaty or statute of, or an authority exercised under, the United States, and the decision is against their validity; or where is drawn in question the validity of a statute of, or an authority exercised under any State, on the ground of their being repugnant to the Constitution, treaties, or laws of the United States, and the decision is in favor of their validity; or where any title, right, privilege, or immunity is claimed under the Constitution, or any treaty or statute of, or commission held or authority exercised under, the United States, and the decision is against the title, right, privilege, or immunity specially set up or claimed by either party under such Constitution, treaty, statute, commission, or authority, may be re-examined and reversed or affirmed in the Supreme Court upon a writ of error. The writ shall have the same effect as if the judgment or decree complained of had been rendered or passed in a court of the United States.

* * * * * * * * *

"The Supreme Court may reaffirm, reverse, modify, or affirm the judgment or decree of such State court," &c.

CONSEQUENCES OF THESE CHANGES.

And what are the consequences of these changes in the forums of justice? The expense of litigation is increased enormously. The trouble of attending to it is more than doubled. By the process of dividing the suit already mentioned there are two suits where there should be but one, and they probably hundreds of miles apart, and possibly standing for trial on the same day. Strong corporations and wealthy individuals are able to attend and litigate in these courts, while the poor are not, and are virtually deprived of their legal "right to a speedy * * * trial" on account of the crowded state of the dockets and the impossibility of reaching the courts.

One of the charges our fathers made against the King of England in the Declaration of Independence was that of "transporting us beyond seas to be tried for pretended offenses." We had as well be tried "beyond seas" as beyond our county, if in both instances we are alike deprived of the power of obtaining justice. The world has heaped anathemas upon the tyrant who placed his laws so high they could not be read. How much more blamable was he for placing his laws out of sight than we are when we place our courts (through which alone the laws can be enforced) out of reach?

Again, by the present judicial system the citizen may be twice tried for the same offense—once by the State and once by the Government, where the same act is made criminal by the statutes of both. It is true that this grows out of our anomalous dual system of government. But that fact should restrain us from extending the jurisdiction of Federal courts further than is absolutely necessary.

If there was one feature of our judicial system in the States held more sacred by our forefathers than all others, it was that which secured to parties a trial before an impartial jury of the county or vicinage where the cause of action arose. So sedulous were they in the protection of this right that most of the States ingrafted it into their constitutions. It is virtually destroyed in the Federal courts. There the juries are taken from remote parts of the State or district, and had almost as well come from a different State, being total strangers to the parties and their surroundings.

I have already spoken of the great cost to litigants from the administration of justice in the Federal courts. But this is not all; they are immensely costly to the Government. Under Democratic rule, before the changes of which I have spoken, the cost of these courts was only a few hundred thousand dollars a year. Now it is millions, and increasing yearly. Too true is it, as stated by Judge Dillon in his work on the Removal of Causes, that "the small tide of litigation that formerly flowed in Federal channels has swollen into a mighty stream." He might have added "and that stream threatens to deluge the country with cost and bear away the dearest privileges of the citizen."

There is another great evil which flows from our present judicial practices. Deputy marshals and their posses may go through the States armed, shooting, destroying property, driving off hogs and cattle of the citizens, beating and killing citizens, and when arrested and prosecuted by the State officials they are permitted to file their petitions in the United States district courts and remove their causes thereto, away from those who witnessed the offense and suffered by it. What more? The district attorney and the Attorney-General for the United States are instructed by the Government to appear and defend the criminal and try to turn him loose. The people of the United States thereby pay officials to defend those who violate law. Is this right? Is it an effort to terrify criminals, or does it tend to encourage crime? I refer to this not as an evil in which the constituents I have the honor to represent are alone interested; for happily for them they have now administering revenue laws in their midst resident officials who are more observant of their rights than non-residents were; but I mention it as a question which affects all of our people alike.

The tendency to centralization is so ably described in an article recently published by a distinguished citizen of Indiana, Mr. Mason, that I quote his language on the subject:

"CENTRALIZATION TENDENCIES.

"The centralizing tendency of our national legislation is dangerous for another reason, namely: It is creating discontent and poisoning the affections of the people toward the Government, thus weakening the spirit of patriotism, upon which exists the ultimate hope of that Government for its just authority and long-continued existence. The humble citizen who for some technical violation of law is arrested and taken two hundred or three hundred miles to be tried in a United States court, and after much delay is perhaps mulcted in the trifling sum of $10, and finds that the expenses attending the same have amounted to several hundred more, very likely causing the loss of his home and the impoverishment of his family, is painfully impressed with the idea that injustice has been done him, and he becomes from that moment a disaffected member of society.

"He sees in such treatment a wrong that forever after rankles in his bosom, and causes him to look upon the Government as his oppressor and enemy rather than his protector and friend. In vain may you talk to him of the necessity of a strong government. In vain may you explain that her shield covers him as one of her children. In vain may you point to the insignia of her power and the evidence of her wealth and magnificence. In vain may you contrast the splendor of those granite temples which lavish folly is so rapidly multiplying all over the land for the dispensation of Federal justice, with the modest courthouse of his home, for to him what are they all but the domed and turreted mausoleums of expiring liberty?

"Such courts are not the courts of the people. No matter how learned and impartial their judges may be; no matter how pure the ermine with which they are clothed; no matter how exalted the social position which they occupy, they are the creatures of encroaching power, and like the magnates of the Church of England are expected to 'magnify their offices.' Their rules are arbitrary and their predilections are in the line of absolutism. They live in the gilded sphere of power and luxurious splendor and their sympathies are not with the homely virtues of the masses. No system that takes the citizen a long distance from his home to be tried for general offenses can be satisfactory to a people imbued with a proper spirit of liberty."

These are words of warning from a man who is of the political party which has been most instrumental in passing these laws. Surely he can not be accused of political bias. I have seen some of the citizens whom I have the honor to represent arrested and carried more than 100 miles to be tried in a Federal court for a simple misdemeanor. I have seen them required to attend term after term when there was either no case ever made out against them, or so light a case that a mere nominal fine only could properly be imposed.

But the poor unfortunates were not liberated till weeks of time and all the money they could get was spent. I have seen those dragged a long distance who were so poor they either had to walk or club together and go in wagons, camping out on the road at night. My object in speaking of these individual cases and their hardships is to show the importance of having justice administered near the parties interested. Why, the gentleman from Ohio told us of two cases in his State where parties had to expend in court costs $300 each in defending themselves against a simple misdemeanor where they were acquitted.

FINALLY IT SEIZES THE BALLOT-BOX.

Mr. Speaker, unfortunately the story of the aggressions of the Federal court, backed up by Congressional legislation, does not end even here. There is a glorious privilege for which our fathers fought and died—a privilege "dearer * * * than light and life" to every freeman through whose veins Anglo-Saxon blood flows. It is the right of local self-government through an untrammeled ballot. Sacred as is this franchise—blood-bought though it was—it, too, has been seized by the Federal court and prostrated by the power which Jefferson predicted would be the destruction of our institutions. Section 2012 of the Revised Statutes, passed in 1871, provides for the appointment of supervisors of elections. By section 2017 they are required—

"To personally inspect, from time to time, and at all times, on the day of election, the manner in which the voting is done, and the way and methods in which the poll-books, registry-lists, and tallies or check-books, whether the same are required by any law of the United States, or any State, Territorial, or municipal law, are kept."

Section 2021, also passed in 1871, provides for the appointment of special deputy marshals.

Section 2022 provides that—

"The marshal and his general deputies, and such special deputies, shall keep the peace, and support and protect the supervisors of election in the discharge of their duties, preserve order at such places of registration and at such polls, prevent fraudulent registration and fraudulent voting thereat, or fraudulent conduct on the part of any officer of election, and immediately, either at the place of registration or polling-place, or elsewhere, and either before or after registering or voting, to arrest and take into custody, with or without process, any person who commits, or attempts or offers to commit, any of the acts or offenses prohibited herein, or who commits any offense against the laws of the United States," &c.

Thus it will be seen that a deputy marshal appointed by a United States court is sent into States to control elections there. He is made the judge of the qualifications of voters and of their good or bad intentions in voting. With no higher process than the policeman's club he may arrest and carry away from the ballot-box an American freeman about to engage in the exercise of the highest political privilege ever bestowed on man.

Can these things be and our liberties last? Can they continue and we be other than slaves? Unfortunately they can not. They are the handwriting upon the wall which requires neither a prophet nor the son of a prophet to interpret, and which tell us that our republican institutions are in danger.

"STRONG GOVERNMENT" THE PLEA.

Under what plea have all these wrongs been perpetrated? What excuse is given for this subversion of the grand system devised and bequeathed to us by the founders of the Republic? It is the same plea under which Napoleon I tore down the Republic and built up the Empire of France. It is the same excuse given by Napoleon III for destroying the liberties of his people and placing upon them monarchy. It is the same under which ambitious men and tyrants have worked from the downfall of the first republic to the establishment of the last despotism—"Necessity for a strong government."

What is the necessity for a stronger government than we have? It is already, when considered in all its bearings, the most powerful upon which the sun shines. It resisted successfully, when much weaker than it is to-day, the greatest shock to which any free government was ever subjected—far greater than can menace it now. When our unfortunate civil war came and scattered the States of the Union this mighty Republic was strong enough to gather them up, replace them in their orbits, and move on, the brightest constellation in the firmament of nations. And all of this without the *post bellum* legislation which I have mentioned. This cry of "necessity for strong government" is only a subterfuge. It is the cloak under which are working those who are not content with our form of government. Let us meet it by constitutional methods, but firmly, as becomes men. Let us not, after the "lightnings of heaven have yielded to our philosophy, permit the temptations of earth to seduce our patriotism."

The Maelstrom on the coast of Norway is the most celebrated whirlpool of the world. Over an area of more than 125 square miles the circling flood sweeps. It is known now to be very dangerous to navigation, and according to ancient mariners whatever came within the compass of this monster of nature, whether ship or shark, whether whale or whaler, was drawn into the vortex, hurled to the center, and dashed to destruction by the whirling flood.

When the student of history looks out on Time's broad ocean, he sees a political Maelstrom more dire, more destructive, than that on Norway's stormy coast. It has circled since the first republic rose, and has wrecked and borne down all the free commonwealths of ancient times by drawing them to centralization, despotism, and ruin.

Its doom is like the Dead Sea air,
And nothing lives that enters there.

There may be seen the wrecks of Rome, of Greece. Strong as they were when they started toward centralized despotism, they were as powerless to resist as is the straw to resist the tornado which impels it. Had the proud Roman been asked whether his country's liberties would not be thrown away, he would have replied indignantly, "No; they are to be perpetual." Yet the pretorian guards, standing upon the ramparts of the "Eternal City," "with a loud voice proclaimed that the Roman world was to be disposed of to the best bidder by public auction," and it was done. Didius Julianus became the purchaser, and was thereby made emperor; and mankind were shocked to see the "mistress of the world" bought, paid for, and controlled by the money of one selfish, scheming, ambitious man.

The Appian Way now no longer resounds with the shouts of victorious Roman freemen, and the soft-voiced Italian has sung his sad song in misery and chains in the "City of the Cæsars."

Had the Greek been asked how long his freedom would last, he would have replied with the same infatuation which seems to have seized us, "Forever!" And yet the matrons who raised up sons for the state, and sent them forth commanding them to "return bearing their shields or borne on them," have been succeeded by the groveling tenants of the harem, and slavish degenerate sons have succeeded free and noble sires all over the land of Leonidas and Lycurgus. Let us take warning by their sad fate, and not permit ourselves to be drifted into this focus of centralized despotism and destruction, either by Congressional mal-legislation or by judicial construction.

[Here the time expired and the hammer fell.]

Thus it will be seen that step by step Federal power has advanced over fields of jurisdiction that in the beginning were the undisputed possession of the States. Where is this encroachment to end? What is the object and the outcome of it? Who will have a hand strong enough to stay its progress? Who with voice eloquent enough to rally the people to resist its evil tendencies? It is bad enough to think of inaugurating new methods of taxation when the people are already taxed to destruction; it is worse to contemplate the fastening of an internal-revenue system upon the country perpetually; but worse by far than those, than these, than all, is the invocation of the taxing power for the purpose of crushing one important industry at the expense of another, for protection's sake in its wildest career never advocated the taxation of one American citizen for the purpose of crushing him out of existence, even when it was run mad it did not go to this extent.

It claimed, then, for the sake of protection to American industries foreign imports should be taxed, but to-day a new doctrine is inaugurated. At this time a new political economy is talked, and we are asked to impose more burdens upon the people who are too heavily

taxed, not because the Government needs money but because somebody else needs the incidental privileges that will flow from the imposition of taxes.

I raised my voice, feeble though it was, against the encroachment of Federal power a year ago. I predicted then that the further degradation of the States and oppression of the citizens would inevitably flow from it. Almost within a fortnight of the time that I made the prophecy, and much earlier than I expected, its fulfillment began. Since that time we have seen the Federal courts of Virginia claiming the right to force the judge of the State court to the selection of certain classes of jurors; we have seen it assert the right to determine what sort of taxes should be paid by the people of Virginia, and we have seen decisions rendered in the Federal branch of our jurisprudence going very far toward the destruction of that reserved authority of the States which has been the boast of the people and the safeguard of the commonwealth which constitutes our Federal Union. We have seen in the city of Cincinnati alone over five hundred deputy United States marshals, appointed by Federal authority, standing around the polls in one day, supervising the citizen in the exercise of his noblest right—the right of suffrage.

Not content with the aggressions of the Federal courts we are called upon to-day to add immensely to their jurisdiction and authority. We have long since put the tobacco-grower under the surveillance of Federal authority, and he is not permitted to sell his product without the consultation and assent of Federal power. That power has also for a quarter of a century held rigorous sway over distilleries. Federal courts have been filled to overflowing with those who had the misfortune to come within the range of Federal informers. But, not satisfied with all of these, this Congress is to-day rushing pell-mell to a greater increase of Federal power, and proposes to bring the deputy marshal to your grocery store and your pantries.

Sir, I believe firmly that when you have protected the citizen in his life, liberty, and pursuit of happiness you have done all that free government was ever intended should be done, and all that can be safely done. When you have restrained one citizen from injuring another, when you have protected the weak from the oppression of the strong, you may well content yourself with permitting the citizen to choose his vocation and pursue it unhampered by Federal interference. I believe, sir, that it is a sound doctrine of government that the Government of the United States ought not to attempt anything in the way of government which can be well done by the States or individuals; and I believe that the State should do nothing that can be as well done by the individual.

Mr. Jefferson put it very tersely when he said that "the object of government was to prevent citizens from injuring one another." We have the grandest system of government ever devised by man. It is a division of power between the individual and State and the Government of the United States. The latter can do nothing the right to do which is not expressly granted in the Constitution of the United States or inevitably implied from the powers that are so expressly granted. The construction of the Constitution is certainly the best and safest construction, and wherever the power has not been delegated in the way indicated it is reserved to the people and the States.

The platform of the Democratic party adopted at Chicago, under which this House was elected and the present Executive placed in the White House, proclaimed the reduction of taxes, and yet in the very first days of our triumph we are violating that promise and propose instead of reducing taxes to increase them. While I am ready and anxious to assist every American industry in every legitimate way I do not think that this legislation is wise. I do not believe that an increase of Federal power can benefit either the State or the individual. So believing I must necessarily stand by the oath I have taken, and my conviction under that oath opposes the bill.

Treasury Surplus—What Labor owes to a Democratic House of Representatives.

SPEECH

OF

HON. JAMES E. CAMPBELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886,

On the conference report on the disagreeing votes of the two Houses on the amendments of the Senate to the joint resolution (H. Res. 126) directing payment of the surplus in the Treasury on the public debt.

Mr. CAMPBELL, of Ohio, said:

Mr. SPEAKER: Having voted for this resolution upon its passage by the House of Representatives I shall support it now upon its return and alteration after a conference with the Senate, although the two plans—the original and the amended—are in some respects dissimilar, and neither precisely meets my personal views of the measure. I am ready to favor any reasonable proposition to apply the surplus in the Treasury toward the liquidation of the public debt, and thereby reduce the interest-bearing obligations of the Government. I would do this largely on behalf of the laboring poor, who, under our systems of tariff and internal revenue, pay the greater share of Federal taxes. I support the pending measure, as I have supported numerous others by which this Democratic House has made a record as the friend of labor and laborers of which the party and the country well may boast.

In the last Congress a Democratic House, for the first time in our history, went systematically to work to provide for and nurture legislation in the interest of the laboring classes by creating a "Committee on Labor," which should have charge of and formulate for Congressional action all measures looking to the organization of labor and the relief of its growing burdens. One of the first results of this action was the creation of the long-desired and much-needed "Bureau of Labor Statistics," by which the facts bearing upon all productive labor and its needs and wishes, upon all oppressions of or movements against laboring people, upon all proceedings in derogation of their rights and privileges, and upon all matters of intelligence either useful or interesting to the workingmen of the country should be gathered and disseminated at the public expense. This work is now being carried on honestly, thoroughly, and satisfactorily, and is of enormous value to every workingman in America—valuable not only in its present performance, but incalculably so in its future possibilities.

Another of the good results of the formation of the Committee on Labor by the last Congress is the prohibition of the importation of contract labor. We all know how the honest laborers of the country, whether native or naturalized, competed a few years ago with cheap, imported, vicious workmen from the slums of the Old World. I recall to memory now the gross charges of importing cheap and inferior laboring people which were sustained against one Jones, a Pennsylvanian, I believe, who was one of the moneyed heads of the last Republican national committee. To fairly exhibit the situation as to imported labor which existed before a Democratic Congress came to the rescue of the workingman I quote the following from a lecture delivered in aid of District Assembly No. 1, Knights of Labor, at the Academy of Music, in Philadelphia, on May 22, 1886, by Maxwell Stevenson. He says:

> Would that we could stop here and say we have truly shown every wrong of which labor complains, but worse remains behind. Men have been returned year after year to the national councils who have pretended to legislate for the whole country. Tariff laws were enacted for the "benefit of labor," and the same legislation which kept the goods out let the labor in; nay, encouraged and permitted employers to import, at the cost of passage and advances, over four hundred thousand workmen—Chinese, largely coolies; Italians, largely under the padrone system; Bohemians, largely Anarchists; Russians and Poles, largely nihilists; Hungarians, largely barbarians—nearly all men; few women or children. Until 1877 the immigration from these countries was almost nothing, but this fact, from the immigration statistics, is not necessary to prove our claim that the increase of four hundred thousand was largely, if not wholly, due to direct efforts and assistance from employers, benefiting wholly by a tariff existing under the false pretense that the wage-earner is protected. What sentiment but greed, what motive but hate, could have moved men for whom legislation has been thus prostituted for years to drive their workmen with their wives and little ones into the wilderness to starve, while men without one or the other, with no knowledge of our laws or sympathy for our people or our ways, whose sole object and hope was to accumulate money to return to the land they were aided to leave, were imported to take their places?

Now, however, owing to legislation by the last Congress, the situation is different, and in addition to what was done then this Democratic House at this session has passed and sent to the Senate an amendment whereby the Secretary of the Treasury may enter into contract with such State commission, board, or officers as may be designated for that purpose by the governor of any State to take charge of the local affairs of immigration in the ports within said State, or may designate any person in any State to execute the provisions of this act, and it is their duty to examine into the condition of passengers arriving at the ports, to go on board of any ship or vessel; and if on examination there shall be found among the passengers any person who is a contract laborer, imported for that purpose, such person shall not be permitted to come ashore; and all such persons shall immediately be sent back to the nations to which they belong and from whence they came, the expense of return of the persons not permitted to land to be borne by the owners of the vessels in which they came; any vessel refusing to pay such expenses not to be thereafter permitted to land at or clear from any port of the United States, and such expenses to be a lien on the vessel.

Under these stringent provisions the free, laboring manhood of America can no longer be insulted and overborne by Chinese coolies, Italian lazzaroni, Hungarian anarchists, or Polish nihilists. It is time that every workingman knew (as many of them already do) that this glorious protection is sought for them by a Democratic House of Representatives.

Of all the important services rendered to wage-earners, whether organized as Knights of Labor or wholly unorganized, was the passage of the law, originating in this House, known as the "arbitration bill." To those liberty-loving and peaceful citizens who desire to see labor secured in its rights, and capital protected but circumscribed within its legitimate sphere; who do not wish the streets of our cities to be scenes of bloody strife between the people and their own militia, this great measure is hailed with universal joy.

Its provisions to recite them briefly are, that in all arbitrations between railroad companies and their employés, and it is this clashing of interests which has produced the most dangerous strikes, the United States shall empower the arbitrators with all authority to swear witnesses, send for persons and papers, pay all expenses of the arbitration, receive and file the award with the Commissioner of Labor who shall make it public, and hold the sitting of the arbitrators at a place near the scene of trouble. As has well been said by the gentleman from Texas [Mr. CRANE]:

Another feature of this bill is that it directs the preservation of the testimony taken in each case in the office of the Commissioner of Labor, which might operate as a check upon the arbitrators, but which would be principally valuable in the preparation of the annual reports of the Commissioner of Labor and for the consideration of Congress and of the Legislatures of the various States in dealing with the great labor question. This testimony would be infinitely more valuable than any amount of theoretical disquisitions delivered before a traveling committee of Congress, because it would be actual, practical, tangible evidence, germane to real, live issues joined by and between parties in interest, and would not be wild, visionary theories upon the general condition of labor throughout the country.

For the first time in our history this attempt by Congress to create a public sentiment by providing peaceful means of solving labor troubles, has made real and tangible the doctrine that labor is an ingredient of commerce and entitled to regulation by the Federal authority as foreshadowed in Chief-Justice Marshall's decision in Gibbons vs. Ogden, 9 Wheaton, 229, when he says:

Commerce, in its amplest signification, means an exchange of goods, but in the advancement of society, labor, transportation, intelligence, care, and various modiums of exchange become commodities and enter into commerce; the subject, the vehicle, the agent, and their various operations, become the object of commercial regulations.

Another measure for the advancement of labor, and its more complete organization, is the act to legalize the incorporation of national trades unions. This act originated in the Senate but the two Houses can justly claim an equal share in its enactment. By the terms of this act a national trades union means any association of working people having two or more branches in the States or Territories of the United States for the purpose of aiding its members to become more skillful and efficient workers, the promotion of their general intelligence, the elevation of their character, the regulation of their wages and their hours and conditions of labor, the protection of their individual rights in the prosecution of their trade or trades, the raising of funds for the benefit of sick, disabled, or unemployed members, or the families of deceased members, and other purposes. Why should not labor incorporate, organize, combine? Why should not the wealth of the nation as represented in its peaceful, honest, properly-directed labor "capitalize itself," if I may coin a term denoting the manner in which capital organizes? In the eloquent language of a gentleman on the other side of this Chamber, Mr. ANDERSON, of Kansas:

We have reached an era in the world's movement new in history. Owing to the dissemination of knowledge through the press and by the telegraph, owing to the development of science in all of its forms and directions, there has come to be such a growth of the masses, such a development of individual intelligence, such an increased personality and manhood, that to-day and as a nation we have fully entered that new era when combinations on the one side not only suggest but force combinations upon the other.

For years we have had, and we have seen them in this Hall, the combinations of aggregated capital. We have had the poolings of railways; we have had the combinations of manufacturing, of importing, of banking, and of railway interests; we have had capital in its aggregated form, no matter what might be its specific shape, we have had it in all forms standing shoulder to shoulder in this Hall and abroad all through the land. And what is the result? You now have on the other hand precisely the same development. You have the combination of the employés of these railways so to protect themselves against the greed and avarice of the corporations that they may secure fair pay for faithful work. You have the combination of farmers all over the continent seeking to protect themselves and to retain in their own pockets some of that profit of which railways rob them by raising freights; you have the combinations of mechanics, miners, and laborers. And to-day—not to such an extent perhaps as will be true next year, and certainly not to such an extent as will be true within ten years—but yet to-day the spirit of mutual interest and sympathy is uniting these various combinations of all workmen, and this great movement is so powerful and taking such direction that it is clear to any man who will look into the future that the question which Congress will have to meet, sooner or later, is the question of protecting the rights of the people, and of regulating the railway and other corporations in the great struggle between combined labor and combined capital. That is the great problem of the future, the burning, intense issue of the hour, as well as the crucial test of American statesmanship.

COMBINATION OF WORKMEN LAWFUL.

It is said that when workmen combine they do an unlawful act. Suppose I believe in the divinity of Christ and in salvation by His grace, which I do, and that other gentlemen entertain the same belief; we combine, we form a church. It is a combination of men holding the same doctrines and desiring to effect the same purposes; is not that combination lawful? Suppose that men entertain the same political opinions, may they not combine in a party? A caucus is a combination. Is that caucus therefore unlawful? Or suppose that workmen choose to combine, is that combination *per se* unlawful? Suppose they do nothing unlawful, can it be said that their combination is a conspiracy or illegal? Men may combine, men do combine. God created them to combine. This Republic is the result of combination, and itself a combination. And to say that these men, risking their lives upon the engine, upon the car, whirling trains over the country in the dark, working for pittances in order that their wives and their children may have a roof, may have food and clothing—to say that the combination of these men is a conspiracy is simply to repeat the malignant slander of a railway lobby. There is no conspiracy about it. They have a perfect right to combine.

Four other measures of great consequence to the workingmen of the nation are the following, which are found scheduled in their order in the short but pithy speech of the chairman of the Committee on Labor, Mr. O'NEILL, of Missouri. They are as follows:

TO PROTECT MECHANICS, LABORERS, AND SERVANTS IN THEIR WAGES (H. R. 5310).

By providing that for all personal services rendered by any person acting in the capacity of mechanic, laborer, or servant, in the District of Columbia and Territories of the United States, no property shall be exempt from seizure and sale under execution.

CONVICT LABOR (H. RES. 142).

Authorizing and directing the Commissioner of Labor to make a full investigation as to the kind and amount of work performed in the penal institutions of the several States and Territories of the United States and the District of Columbia, as to the methods under which convicts are or may be employed, and as to all the facts pertaining to convict labor and the influence of the same upon the industries of the country.

CONVICT LABOR (H. R. 1622).

To prohibit any officer, agent, or servant of the Government of the United States to hire or contract out the labor of prisoners incarcerated for violating the laws of the United States.

CONVICT AND ALIEN LABOR (H. R. 5541).

To prevent the employment of convict labor and alien labor upon public buildings and other public works, and convict labor in the preparation or manufacture of materials for public buildings and other public works, and to regulate the manner of letting contracts therefor.

Thus, in the short time I have to consume, I have portrayed briefly the outlines of the great work which the Democratic House has done for the bone and sinew of the land—the hardy sons of toil, in the sweat of whose brows has been wrought the prosperity and glory of our country. I would I could here give an outline also of the other work done in this House, as, for instance, the enormous forfeitures of railroad land grants, whereby nearly a hundred million acres of rich and fertile lands have been, so far as this House is concerned, wrested from the grasp of cormorant railroad monopolies and restored to the people to be made into homes for the children of the poor.

But space forbids, and I forbear the further recital of the priceless boons conferred by this House on the yeomanry of the land.

As contrasting this action with the party lately deposed from power I say nothing in my own words, but append the following appropriate and true quotation from a document recently issued by the workingmen to their own people:

Capital and labor should be friends, and are friends when wholesome laws control and govern the relations between them. It is only when legislation is enacted to advance capital at the expense of labor that the relations between become strained and unnatural. The legislation, national and State, for twenty-four years has been largely in the hands of the Republican party. The policy of that party has been, and is, to foster capital, invite to extravagant investment, and incite it to the formation of syndicates and large and grasping corporations. The evidences of these facts are so patent that it would be a folly and a burden to strengthen them by illustration. The policy of the Democratic party has been, and is, to conform the relations of capital to the just rights of labor; not by oppressing the former, or enacting laws that endanger its safety, but by an adjustment of the rights of each on the most equitable basis.

* * * * * * * *

The administration of President Cleveland exhibits the keenest sense of justice on this subject, and its action as to the public domain, which it demands shall be held in reserve for the laboring men of the country, evidences its desires and intents, while the forfeitures it has claimed from the great railroad companies, which were subsidized by the Republican party, attests its determination to hold the great railroads to a strict observance of the conditions which accompanied their incorporation. The Democracy will protect the weak against the strong and will jealously guard the rights of the many against the grasping disposition of the few.

Post-Office Appropriation Bill.

SPEECH

OF

HON. SETH L. MILLIKEN,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 20, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the amendments of the Senate to the bill (H. R. 5887) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1887—

Mr. MILLIKEN said:

Mr. CHAIRMAN: My friend from Alabama in the course of his remarks said that we seemed to be very fond of imitating Germany, her empire, her Iron Duke, and all that sort of thing. Germany is a pretty bright nation, and while I do not desire that we shall imitate either her emperor, her Iron Duke, her form of government, or her oppressive laws, yet when that government has proved the success of a public measure I do not know why we should not profit by her experience.

But let me ask my friend if he and his party do not stand ready in this House always to imitate the economic system of a foreign government as opposed to the American system of collecting our revenues?

Indeed they urge the English revenue system upon us in the morning and in the evening, at all times and upon all occasions, and when it is proposed that we shall establish new lines of steamers in order to carry the products of this country abroad so that we may open new markets for our manufacturers and furnish employment for our workingmen at home, these gentlemen cry out that that is taxing one portion of the people for the benefit of another; and when we attempt to protect directly by revenue laws our workingmen in the receipt of fair wages for their labor, these gentlemen again raise the same cry and parade before us the same bug-bear.

The gentleman from Texas said the other day that the difference between him and me upon this question, the method of raising revenue, was that he was in favor of a tariff for revenue only, with such incidental protection as it might give, but that I was in favor of "a protective tariff—that is, a robber tariff." I desire to say in the first place that a tariff for revenue only, with incidental protection, is an impossibility. It can not exist. A tariff for revenue only is a tariff levied upon such articles as will produce the largest revenue with the least taxation, and of course that revenue must be raised entirely upon articles that are produced abroad, so that such a tariff can not give a single dollar's worth of protection.

As to the robbery of which gentlemen so bitterly complain, where, I pray, does it come in? He who would rob the people is not the protective-tariff man who would so levy duties upon imports as to sustain the industries by which our workingmen live, but it is he who desires "a tariff for revenue only," a tariff that would tax the mouths and backs of the people and give them nothing in return. And why do gentlemen complain of our thrift? Why do they not rather emulate it? Can not they understand that if they will apply the advantages of protection in their own States they may thereby achieve as much good to themselves as we have done? Is it not more manly for them to try to get even with us by building themselves up than by tearing us down? Have they not the enterprise to make such an effort? How can they become richer by destroying our prosperity? They seem to think they can. The manufactures of the North appear to be their especial abhorrence. Take notice with what a ruthless hand the leader of their party in this House would crush the industries of my own State.

Of this I will speak more at length hereafter, but I wish now to refer to the fact that the tariff bill which they have reported would relegate our lumbering interests to Canada, our fisheries to the maritime provinces of a foreign power, would destroy the avocation of our wool-growers, stop our cotton and woolen manufactories; that legislation introduced by the Democratic friends of this measure would annihilate our ship-building industry, while they have defeated legislation intended to prevent our foreign carrying trade from entirely disappearing.

Indeed, if gentlemen had endeavored to legislate for the sole purpose of punishing the people of Maine, they could hardly have framed bills better calculated to accomplish that result.

When the Roman senators said to their northern conqueror, whose hard terms of capitulation they felt to be too grievous to bear, "If we submit to these things, what, oh king, do you leave us?" the grim, laconic reply was, "your lives." Well may the people of Maine repeat this question to the free-trade Democracy, and well may the latter repeat the reply of the barbarian king. You do, indeed, gentlemen, leave us our lives, but how many of our avocations do you leave us by which we may support our lives? I think our people will owe you small thanks for what will remain to them if you succeed in enacting your proposed legislation. But it is not alone because this legislation strikes a fatal blow at the industries of my own State that I oppose it.

It attacks American labor and American industries. It is the attack that is made upon the dignity of American labor and the welfare of the American laborer, and the fatal blow which it directly and indirectly deals against American industries in all sections of our land, that I desire to repel. The working men and women of this country should receive the protection of the Government in the pursuit of their various avocations for many reasons.

In the first place, they deserve it. Their hands of toil mold the resources of the country into available wealth. They make the wilderness blossom and the waste places to become fruitful, the rivers to resound with humming spindles, the seas to bear the burdens of the commerce of nations, the mountains and valleys to disgorge their riches, and the continent to be spanned and checkered with roads of steel. They deserve all the good that can come to them.

But the Republic also needs that they should be prosperous. Their hands hold up our fabric of government. Whatever weakens them weakens the foundation of our institutions. Whatever destroys them destroys the national life. Alone upon an independent, intelligent, self-asserting class of workingmen upon the farm, in the channels of commerce, at the mechanic's bench, behind the merchant's counter, in the quarry where forms of beauty and grand structures are chiseled from the solid stone, and wherever men toil with hands and brain, can a republic live and flourish.

Cheap labor means degraded, ignorant, wretched, and vicious labor. Whoever would come to this country to cheapen labor should be excluded from it, and every measure of legislation which, like the tariff bill recently reported, would either cheapen American labor or destroy our great industries and drive our people into idleness and poverty, should be cursed and branded like Cain, and go forth to meet in every patriotic man an enemy.

Cheap Chinese labor, if unrestricted, would make of California a land of rich property-holders and degraded toilers, an aristocracy continually diminishing in numbers and an ill-paid class of laborers ever growing more numerous and more wretched, with no prosperous middle class to sustain free government.

The same would free trade, toward which the bill referred to is an advancing step, do for the country by placing American working men and women in competition with foreign pauper laborers and reducing them to the latter's helpless condition.

MUST EXTEND OUR FOREIGN MARKETS.

But, says the free-trader, we must extend our foreign markets by abolishing protective duties and allowing the foreigner to compete freely in our own markets with his pauper-produced goods. Both reason and experience conclusively demonstrate that we can not enter the foreign market by this avenue; and also that it would not be desirable to do so even if it were possible, for it could be done only at a cost with which the advantage gained would be in no degree commensurate.

"There is no friendship in trade" is a proposition as true as it is old. The foreigner of every country will purchase where he can do so with the greatest advantage to himself, without considering where his own sales are made.

So long as we can offer our wheat, beef, coarse cottons, implements of agriculture, and other goods in the markets of the world upon terms more favorable to the buyer than he can obtain them elsewhere, just so long and no longer will he be our customer. Though we should allow him free access to our markets with his cheap goods so that he might drive out every similar article made or raised in America, still he would not buy a pound of our cotton or a bushel of our wheat if he could procure them more cheaply of another.

TRADE IS NO BARTER.

The proposition of the free-trader is that trade is barter. This is his fundamental error. To be sure this proposition in early days was true. It is true to-day of our intercourse with barbarous nations. We exchange rum, beads, and brass jewelry for ivory and oil with some tribes of Africa; but among civilized nations the invention of money has abolished this practice. This medium of exchange has unfettered trade, taken away the necessity of getting from him to whom we sell what we want in return, and enables us to sell where we can sell best and purchase where we can buy cheapest. Barter, which is almost wholly abandoned in our domestic transactions, is made even less use of in our foreign trades, as the statistics of our commerce abundantly prove.

Our purchases from England are but a little more than one-third in value of what we sell to her. To Scotland our exports are double the value of our imports from that country. We sell to Ireland nine times as much as we buy of her, to Denmark nearly twenty times as much, to Belgium twice as much, to Holland three times as much, to Russia more than five times as much; while from Cuba we buy six times as much as we sell to her, from the British West Indies ten times as much, from China and Brazil five times as much, while of Germany and France, almost alone, can it be said that our exports and imports are nearly of equal value?

The fact is that we sell the great bulk of our surplus products to Europe, where we buy comparatively little, and use the balance in our favor there to pay the balance against us in the West Indies, South America, and China.

If the proposition of the free-trader that by opening our markets to the foreigner we should make him a larger purchaser from ourselves were not a fallacy, why does not Cuba, whose sixty-five millions of dollars' worth of imports to our country, with the exception of tobacco, are nearly all upon the "free-list," buy more than a dozen millions of us? Why does China, who, without payment of duties, send her goods to the value of $23,000,000 to us, purchase only the pitiable amount of $4,500,000 worth here? Why is Brazil, who sends untaxed $50,000,000 worth to be consumed here, our customer to the extent of only $9,000,000; and why does Great Britain buy of us $475,000,000 worth, while we purchase less than half that value of her? In the light of these statistics and many others which might be quoted, what reason have we to believe that by opening our markets to foreign manufacturers we should receive any adequate return? We have none.

Trade is not barter; and this fact, established beyond question by the commercial dealings of civilized nations, is a conclusive answer to the proposition that we should establish free trade in order to enter freely into foreign markets ourselves.

Why, England to-day, with her free trade and cheap labor, her immense capital and great establishments, is sorely pressed to find markets for her goods; and are we so simple as to believe that by waiving the wand of free trade we can force her from the commercial positions she holds abroad, unless we so reduce the wages of our working people as to enable us to sell our commodities as cheaply as she can sell hers? Indeed, it is because she is so overloaded with surplus manufactures that she is now pushing, with ever-unwonted activity and determination, by the aid of the Cobden Club and the pro-British party in this country, her assaults upon our industries.

But I am not yet done with this branch of the subject. I assert that not only are we not debarring ourselves from foreign markets by protecting our own, but that in this way are we gaining them, and we will continue to gain them.

In 1868 our exports amounted in value to $68,000,000. Now they aggregate five times that sum. By protecting our industries we have vastly multiplied them and stimulated the inventive genius of our people. The better wages that protection has given to the mechanic have enabled him to shorten his hours of daily labor, and so afforded him time to study, reflect, and evolve problems which, practically applied, have given him machinery by the use of which he is already in many pursuits outstripping his foreign competitor. Thus came the American watch, the best in the world, which not only supplies our own markets, but is sold in every civilized country on the globe, forcing even the Swiss and the Englishman to become its purchaser. Thus we can send abroad 150,000,000 yards of coarse cotton and 400,000 clocks annually. Thus we can sell our agricultural implements in every quarter of the globe, and so we are increasing our exports every year.

In this connection I desire to read an article from the Scientific American of February 27, 1886:

AMERICAN BRIDGES ABROAD.

The Union Bridge Company, of New York, has been awarded the contract for constructing a bridge across the Hawksberry River, in New South Wales. It is to be a double-track railway bridge, consisting of seven steel trusses, 415 feet long, resting upon stone piers. The river at the proposed site for the bridge is practically an arm of the sea, having a tidal current which averages 4 miles an hour. The work will be unique in one respect, for the piers will have to go to the unprecedented depth of 170 feet below the low-water mark. The foundations will be of beton inclosed in iron caissons. The depth and current will make the work one of great difficulty. The contract is with the Government of New South Wales, and calls for the completion of the work in two years and a half. Including the approaches, the bridge will be about a mile in length, and will cost probably something between one and a half and two million dollars.

When the work was contemplated, a commission of three noted English engineers was appointed to prepare specifications and invite bids. Their own estimate of the cost was $3,000,000. Sixteen bids were submitted. They came from English, Scotch, French, German, Flemish, Australian, and American engineers. Fourteen of these bids were rejected by the commission. The two forwarded to the Government of New South Wales came from American firms, the Union Bridge Company and the Edge Moor Iron Company, of Wilmington, Del. These were the only American companies who entered the competition. Though the bid of the former was $150,000 the higher, their plan was accepted as being more feasible. It is understood that the stonework has been sublet to Anderson & Barr, of New York. The steel work will all be made at the company's establishment in Buffalo, N. Y. It is very gratifying that American bridge builders, in spite of the higher rates of wages prevalent in this country, are able to compete successfully with the older European firms. It is a large compliment to American engineers that such an important work should be intrusted to them in preference to home constructors.

That is, to say the least, highly complimentary to American mechanical skill. Protect our workingmen, give them fair wages for their labor, so that they need not delve all the day long for subsistence. Let ten hours be the extreme length of their day's toil. I would have it rather less than more. Let them have time to exercise their ingenuity and utilize their practical knowledge, and they will solve the question of obtaining foreign markets for American products without surrendering our incomparable valuable markets at home.

What they need to aid them in doing this is not the free-trade legislation provided in the Morrison tariff bill, but the direct communication with foreign countries, and especially the South American Republics and Brazil, which the Senate amendment to the pending bill is designed to give and which our Democratic friends in this House so stubbornly oppose.

HOME MARKET.

I have just spoken of our home markets. I say they are incomparably valuable, for certainly when compared with them the foreign markets for American goods are seen to be insignificant. They take but 8 per cent., while our home markets absorb 92 per cent. of our manufactures. We send to them even a smaller per cent. of our agricultural products, and yet, glutted as they are all over the globe, gentlemen would exchange for a delusive hope of extending our sales in them our rich home markets, with the princely rewards which they bestow upon our producers. They would exchange fertile fields for barren waste, clean wheat for almost useless chaff, fine gold for dross.

What a rich feast would we present to the foreigner if our free-trade, pro-British Democracy should succeed in its efforts to break down the protecting muniments of our industries and allow him to revel in the spoils of our American markets! This splendid home market, so broad as to absorb not only our staple but perishable products upon which the largest profits are realized, secure from the fluctations caused by mutations abroad, saving two transportations across the ocean upon all that is sold and bought, the best-paying to the producer because supported by the best-paid consumers on the globe, has never been properly valued by our people. It sends the egg-peddler, the poultry-buyer, the potato and grain merchant, with cash in hand to every farmer's door. It offers him 30 per cent. more than he could sell for twenty-five years ago. Nowhere in the world can a man find so favorable a market for what he has to sell, whether it be the product of the land or the sea, the labor of his hands or the ingenuity of his brain, as in this good, free land of ours.

And so it will continue to be as long as we maintain such duties as shall adequately protect the labor of our people from a ruinous competition with cheap labor. No wonder this home market ravishes the eyes of the foreign merchant and manufacturer, that his heart beats with aching avarice as he gazes upon it, that his soul swells with earnest longing to embrace it. Never did famished Highland clan look more eagerly down upon well-stored granaries and fattened herds of Lowlander; never did Goth or Hun, or half-fed German horde gaze upon the yellow harvests and purple vine-clad hillsides of Italy and Gaul more lustfully and hungrily than do the greedy, grasping British manufacturers and merchants to-day urged by their own avarice and the clamor of their ragged, poorly-housed, and ill-fed laborers, look upon the better than golden treasure of our American markets; and never was traitor in Lowland, Roman, or Gallic camp a more grievous and fatal betrayer of his countrymen than the self-deluded doctrinaries, the English-aping dudes, and the foreign-bought gentlemen who seek by shot and shell of sophistry to batter down the walls of protection to our industries, founded in the experience of our forefathers and reared high in the wise counsels of the most eminent sons, and let these foreign enemies in upon us to capture our advantages and ruin our prosperity, as the Vandals captured the wealth and ruined the splendors of Rome.

WE HAVE NO SURPLUS REVENUE.

Gentlemen would abolish duties to the amount of our surplus revenue so as to reduce taxation to that extent. Well, I am as ready to reduce taxation upon the people as any tariff reformer in the land when it can be done really for the people's benefit. But there is more humbug and demagogism mixed with some grains of deluded honesty concealed under the mask of this phrase, "reduce taxation," than most any other in the English language. And the curious fact is that it is scarcely used by the people on whom the burdens of taxation bear hardest, but is a shibboleth in the mouths of our British cousins, who, while they feign to be so anxious that we should not be oppressed by taxation, scruple not to oppress their own people with rags and hunger; by some of our capitalists in the great cities, our doctrinaire professors, and a lot of dudes who never felt the pressure of taxation nor anything else, save that of tight pants and pinching shoes.

But have we any surplus revenue? Have we had any in the last twenty years? How can a man be said to have a surplus income when by the use of all he can get he can not support himself and pay his debts? How can that country be said to have a surplus of revenue, when, after providing for its necessary expenditures, it has enough left to pay but a small part of what it owes.

What has been done in the past with what gentlemen please to call the surplus income of the Government? I will tell you. It has been applied to the reduction of our great war debt from $3,000,000,000 in 1865 to $1,400,000,000 now; to the reduction of interest from $150,000,000 of interest upon that debt, which the people paid in gold in 1865, to less than fifty millions which they paid for the year when this administration came into power; and I hope it will continue to be so applied until the last dollar of the public debt shall have been paid.

Such applications of it have raised the credit of the nation, which borrowed money in 1860 at 12 per cent. interest, to a plane higher than that of any other nation on the globe. Do you believe that we could have resumed specie payments and borrowed money at 3 per cent. interest had we raised no revenue to reduce our debt? I am no believer in the doctrine that "a public debt is a public blessing." That doctrine will do for a monarchy where a public debt is desired to help bayonets protect a crown. It may uphold an oppressive dynasty, it may support a crushing despotism, it may cause submission to a grinding aristocracy, but in a republic it should be the subject of abhorrence, and the republic that needs it should not exist.

So long as our own great Republic shall continue to be the Republic that it is to-day, a republic in fact as well as in name, improving with experience in self-government which time shall give to the people, so long as it shall be a Government of the people, by the people, and for the people, it will have the love of the people, and that will be enough for its protection. If it shall ever cease to be this (God grant that it never may), if the time shall come when it shall be such that every citizen shall need to have its bond in his pocket to secure his allegiance to it, then it will no longer merit the people's love and respect, and deserve no longer to survive.

No, sir, we want none of these extrinsic, unreliable bonds of union. Let this great Republic continue to be a beneficence to the people, then their patriotism shall be its sufficient bond of union and its solid foundation-stone; then it shall be firm as the immovable mountain, as enduring as the storm-beaten, wave-washed rock, which neither winds nor waters can disturb.

I repeat, let the last dollar of the public debt be paid as soon as it can prudently and reasonably be done, and thus shall we set a most salutary example before the great nations of the other hemisphere, and do an act almost as useful and glorious as that of the men who founded our Government, and those, who, but a few years ago, by their brave deeds and great sacrifices, saved its life and baptized it anew in the love and pride of the nation.

But what right have we to expect a surplus in the future? Indeed, have we not according to the estimate of the Treasury Department a probable deficit not far in the distance confronting us, instead of the good old-fashioned Republican surplus, by which the public debt was reduced $1,500,000,000 and the annual interest upon it was reduced $100,000,000

in twenty years? The present reform Congress has already provided for the appropriation of so much money that leaders upon the other side of the House dare not allow the just obligations of the nation to be met lest our expenditures shall be so large that the purpose of the free-trade Democracy can not be accomplished. And so the reasonable pension legislation asked for by the counsel of the Grand Army of the Republic is refused because it might leave no room for the reduction of protective duties. The repeal of the limitation of the pension-arrears act is denied to those modest and brave soldiers who hesitated to ask the Government for the reward which they richly deserved because that repeal would perhaps so swell our expenditures as to give no opportunity for a successful attack upon American interests. Private-bill day is dispensed with or filibustered away, because if the claims of the nation's private creditors be considered and those that are just shall be paid, the hope of the "pro-British" Democracy to surrender our great home market to the foreigner, stop our manufactures, or reduce our workingmen to the poor condition of foreign laborers will have vanished.

The proposition of these gentlemen is twofold. It seeks to curtail our revenues so as to bankrupt our national Treasury, and at the same time to let in upon us unrestricted foreign competition which must ruin our industries and impoverish our people.

Surely what more that is harmful to us could the bitterest enemies of our country do? But if the national debt were paid, if we had a real surplus, and the phrase "reduce taxation" expressed an honest purpose instead of being uttered to cover an ulterior and unpatriotic one, could we reach the end desired through the doors of free trade? When have we ever made progress toward that end by reduction of duties? We put tea and coffee on the free-list. We thereby cut off many millions of revenue which had poured annually into the public Treasury, and which, if it had been continued, might have been applied to the reduction of our debt and interest and so lightened the burdens of taxation. But did any American citizen thereafter purchase his tea and coffee more cheaply than before? We put hides on the free-list, but who on that account has bought at a less price his boots and shoes? And do gentlemen believe that if they shall succeed in placing lumber on the free-list, thus handing over the lumber industries of Maine, Michigan, Wisconsin, and Minnesota to the Canadians, the latter having obtained a monopoly of the business will sell us their boards, timber, shingles, and clapboards upon more reasonable terms than we can obtain them from our own mills now? This would be a denial of all our past experience on the subject. Competition among our own people has been our protection against high prices. This has reduced the cost of manufactures more than 30 per cent. in the last twenty-five years.

In almost every instance where new industries have been started in this country under the encouragement of protective duties they have given to the people, within no long time after they have begun to operate, their product at a cost materially less than that at which we had before purchased similar goods from abroad; and I make the prediction that with the continuance of our present revenue system the mills of New England, leaving the manufacture of the coarser fabrics to the West and South, will, in a few years, furnish to our people, at considerably reduced prices, many grades of fine goods which are now imported from Great Britain.

WHO ASKS FOR THIS BILL?

Now, who desires the passage of the Morrison tariff bill? Where are the petitions that have come up to Congress asking for it? Who has seen them or heard of them? From what source have they been sent here? Who originated them, if they exist? Have the farmers sent them here? Does he who from his own well-tilled and fertile acres produces all the prime necessaries of life, he who gives to the world its food and to the cities their manhood, whose practical wisdom is as proverbial as his patriotism, does he petition for this legislation? Certainly no pains have been spared by the free-trader to misinform him upon the subject of protection duties and array him against them.

The Cobden Club and their Democratic pro-British allies in this country have flooded him, as they have all of us, with pamphlets and documents arguing his unfavorable condition under a protective tariff, urging him to arouse to a sense of the injustice of our American revenue system to most every one in the world and to him in particular.

But he does not make any demonstration here in the direction that our pro-British Democracy desires. He does not take their endlessly proffered doses of misinformation worth a cent. He neither frightens nor arouses against protection worth a mill. He has been accustomed to deal with facts rather than theories. He never makes a good audience for a mere doctrinaire's guesses, and he also knows that the doctrinaire always guesses, and never practically and by experience has any information at all.

Seeing, as he does, that almost everything he raises upon his land is directly protected, so that his hay, potatoes, cattle, and sheep sell for 20 per cent. more than those of his Canadian neighbor, when he looks over the price-current and discovers that protection has encouraged manufactories near his own home, which, competing with each other, have so reduced prices that they furnish him with all the goods he wishes to buy, made of our own raw material, in our own country, and by the hands of our workmen, 30 per cent. cheaper than he could buy them twenty years ago from the foreigner, then sending his purchase-money out of the country instead of retaining it at home as he now does; when he realizes that these manufactories have created for him a home market which takes almost his entire produce at a price 30 per cent. higher than he received under the low tariff of little more than a quarter of a century ago, he hesitates not to say of the free-trade Democracy as the old frontiersman said of a body of Sioux Indians whom he saw in the distance approaching on horseback, "Perhaps I do not know exactly who and what you are and what may be your purposes, but I feel mighty sure that you are no friends of mine." He has the intelligence to know that to crush out great manufacturing industry by free trade or a low tariff would not only destroy his best market, but turn out of employment thousands of men, who, being driven from their former avocations, would become his competitors upon the land.

No; the farmer is not here petitioning for a reduction of protective duties. Well, is it the laboring man who asks for this legislation? It is not he, indeed. Go into any protectionist club in the country and a large majority of those whom you will meet there will be found to be men who live by the work of their hands. It is not there that the retired capitalists, the rich dudes, the theorizing professors, and the hired emissaries of the Cobden Club are pleased to congregate. It is in the free-trade leagues, where the American workingman is not seen, that these gentlemen are to be found.

The laboring man knows that the protective tariff alone saves him from receiving no more than the wages of his foreign fellow-workman. As he would not be forced to toil for the starvation wages given to labor abroad, as he would not exchange his clean, decent home for the wretched hovels of workingmen there, his sufficient and wholesome food for the miserable pittance allowed to them, his comforts and the dignity of his position for their misery and degradation, so he will not be argued or cajoled into raising his hand to strike down the industries by which he so well and respectably lives. He knows, even if our free-trade politicians do not, that whenever he is forced to accept the pitiable wages of the foreign laborer he must accept at the same time the wretched conditions of their existence.

The gentleman from Texas [Mr. REAGAN] who calls protection robbery of the laboring men, and the gentleman from Arkansas [Mr. DUNN] who has treated us to a long, dreary waste of words upon the same subject, do not know what educated, intelligent, and industrious laboring men and women are. They have never lived among them. They have a race of laborers whom they and their ancestors have robbed of all their wages for five generations, to whom they have given neither homes nor schools but bought and sold like cattle. These are cheap laborers; cheap because recently oppressed and ignorant. Such would gentlemen make the workingmen of the North. That we mean shall not be done. The gentleman from Arkansas fears that unless we reduce the tariff and thereby reduce wages we can not compete with the wheat-growers of India. The rate of wages in India for farm laborers is 30 cents per week. Does the gentleman think it desirable to reduce wages in this country to that figure in order to save the limited advantages we have in the foreign wheat market?

When I asked him this question upon the floor of the House during his speech in favor of free ships, he said, "We must confront that position." This furnishes a key to the position held by our opponents. Their plan is to reduce the price of production by diminishing the wages of labor, and hence they march forth under the banner of "tariff for revenue only" to secure, if possible, a victory for free trade.

I do not blame the gentleman for not entertaining the same respect for labor and the same solicitude for the comfort and prosperity, the dignity and independence of the American workingmen that we do. They have bought and sold and despised labor so long that it is not strange that they should desire to cheapen it now.

Is it the merchant who petitions for this legislation? No; he is not so unwise as not to appreciate that the thrift of his occupation depends upon the ability of his customers to buy and make payment, and that a reduction of the tariff, which would reduce the people's earnings, would leave him but a lean market.

Neither the farmer, the laborer, the merchant, nor the manufacturer desires the passage of the bill which the committee have reported to the House. No one of them has petitioned for it; for each has the intelligence to see in it only ruin for himself and disaster for the whole people. Who then is it that favors legislation to abolish our protective duties? Above all others it is the British manufacturer. With the shrewdness and greed of his nation, he is pushing to recover his grasp upon the American market, which our protective tariff has, in so large measure, wrenched away from him and given to our own producers. His purchased allies in this country are aiding him to the best of their abilities in this endeavor. He has the help, too, of a lot of theorists, who know nothing practical, nothing of the cares and conflicts of business or the wants of the toiler. And not the least of all, he has upon his side the prejudices of a large portion of the South and its hostility to Northern prosperity.

This combination, using the Democratic party as its organ and instrument and desperately working for that party's success that their purpose may be accomplished, attack in detail almost every branch of

American industry. The gentleman from Arkansas and his friends want free ships. He knows, and so do they, that if his object could be gained it would utterly destroy our ship-building industry and close every American ship-yard now in existence. It would deprive the nation of the plant, equipment, and skill necessary in case of foreign war to build a navy, make us entirely dependent upon others, and perhaps place us at the mercy of our enemies. They want free fish. They would hand this New England industry over to the Canadians. It does not matter to them that the fishing fleets furnish the most reliable nursery to produce seamen to man our vessels of war.

Our free-trade Democrats say that their vocation must go, that their employment must be taken from them, and that this element of national safety and wealth shall be transferred to a foreign power. They say to Maine that her great lumber manufactories must cease to operate, that the vast amount of capital invested in them must be destroyed, and that the thousands of workmen employed in them must leave our State to escape idleness and consequent poverty. They place wool upon the free-list and leave our wool-growers no alternative but to slaughter their flocks.

With the loss of these industries, together with our cotton and woolen factories, our ship-yards and fisheries, what would this combination, this pro-British Democracy, leave for our people to do? What avenues to wealth or competency or comfortable conditions of existence would be left to us? Nothing less than the reduction of wages to the low price of foreign labor could save our industries from extinction, a reduction which would bring our working people to rags and wretchedness; and in this respect Maine presents an example of what this party has in store for all the most enterprising, industrious, and prosperous States of the country. I repeat, they attack the whole line of American avocations in which the foreigner competes with us. Our manufactures seem to loom up before their vision as gigantic enemies. The gentleman from Texas [Mr. REAGAN] says they are in a particular locality, that is, in the North; but why this demonstration of hostility against our section of the country? Do gentlemen feel that we destroyed their property in slaves, and that they would therefore retaliate by crushing our manufactures? Let them feel so no longer. It was the first shot upon Sumter, fired at the national heart, that missed its mark and killed slavery. The attack upon the national life assured the death of that iniquitous institution. The South broke the shackles of the slave in attempting to tighten them.

But our manufactures are to be no longer confined to one locality. Already extending over the West and Pacific States, they are making a rapid progress into the South, and gentlemen will have to look well to their solid free-trade column in that section of our country or they will find it shattered and themselves attacked in the rear, while their faces are turned to the North and they are directing their weapons against the land of busy hands and active, inventive brains.

If gentlemen would act wisely and patriotically they would seek rather to attain to the prosperity of those States which have availed themselves of the advantages of protection, by imitating their example, than persist in their endeavor to reduce them to what they declare to be their own deplorable condition.

You are not suffering, gentlemen, by our prosperity. A part of it is your own, for we are now one nation, and we will continue to be so, and our great manufactories, which you would use the hand of foreign cheap labor to ruin, are furnishing you with their products 30 per cent. cheaper than you once purchased abroad. Could you succeed in your purpose of destroying them, thus giving to Great Britain a monopoly of our market, do you doubt she would then charge you her old price?

FREE TRADE DURING THE CONFEDERATION.

Gentlemen lay down their free-trade proposition and discuss the constitutionality of the protective tariff as if we had never suffered the misfortunes of the one nor had a history bearing upon the other. Our forefathers experienced the full fruition of free trade during the period of the confederation. And what was it? It certainly was not such as they enjoyed, nor such as we can look back upon, with any degree of satisfaction. The war of the Revolution had acted as a protective tariff to the colonies. It had excluded the free introduction of foreign goods to their markets, and many new industries sprang up to give employment to mechanics and laborers and markets to the farmers, but at the close of the war the colonies found themselves practically without protective duties. The inflow of foreign goods was so great as to glut the markets and crush the growing industries of the Americans. Mills were shut down, factories were closed, fires went out in the forges, and mining operations ceased. Cheap goods from Europe took the money from the colonies. All industries were embraced in the general disaster. The mechanic got no employment, the laborer found no market for his toil, and the farmer could not sell his produce because the money to pay for it had gone across the Atlantic to purchase cheap foreign goods. Cattle were used for exchange, farms were sold for a song, stock upon every hand went off under the auctioneer's hammer, commerce was prostrate, and ruin was everywhere. Language has been exhausted in describing the wreck, the misery, the almost utter despair of the period from 1783 to 1789, the only almost absolute free-trade period in our history.

"The pinching shrinkage of home industries and consequent scarcity of opportunities for labor, the exhaustive drain of specie to Europe, the sore distress for lack of money, the unendurable conditions in the relation of debtor and creditor, the resentful discontent, the weakened respect for law and its tribunals, the decay of allegiance to the Government, the loss of personal confidence between man and man, the weakening of the ties of society, the disturbance, the antagonism to the constituted authorities, the insurrectionary commotions and appeals to arms in search of unnatural redress which brought the new Government and American freedom to the verge of destruction," make a not overdrawn picture of what in the present depression we hear some mutterings of and what must inevitably occur upon a wider field and with vastly more direful consequences if Great Britain, with the aid of her Democratic allies here, shall unfasten the gates that hold back the flood of her pauper-produced products that threaten to inundate our country and sweep from existence our manifold and almost countless industries.

But this free-trade disaster did one good thing. It produced the Constitution and the Union! From South Carolina to Massachusetts, from the Atlantic to the Western frontier, the people clamored for a government that should have power to regulate commerce and protect their avocations. The necessity of complying with this demand, as well as the justice of it, was readily recognized by the prominent men of that time. George Washington, James Madison, and their distinguished contemporaries earnestly exerted their great powers to bring together the colonies under a government with power to "regulate commerce," a phrase which, in the vocabulary of the time, was universally understood to include the right to levy protective duties. Indeed, this was the main purpose and controlling impulse that brought the colonies together as States under the Constitution, and the first law enacted by the new Government was one which provided for a protective tariff.

They enacted this law in compliance with the prayers of a multitude of petitions, in compliance, indeed, with the universal understanding that to protect American industries was one of the most important purposes for which the new and stronger government was to be established. In all the debates in the First Congress under the Constitution, wherein were so many members who were members of the convention that framed and adopted that great charter, while the right to regulate commerce was openly and uniformly construed to include the power to protect American industries by levying duties upon imports, while protective laws were enacted, and laws also to secure to us our coasting trade, no doubt of the constitutionality of these laws was ever expressed.

Indeed, this question was left to be raised by men of a subsequent generation, men who had nothing to do with framing the Constitution, men who in all probability would never have framed it, men who attempted to nullify it, and who inculcated into their sons doctrines that led them to attempt to destroy it. It was when the cotton-gin had been invented and slave labor was believed to have become profitable, when the South desired to import cheap goods to clothe her slaves, to discourage Northern manufacturers and make the North a purely agricultural country, so that she might obtain for her slaves cheap food, that the astute politicians of the South, including John C. Calhoun, who had been a radical protectionist, discovered that the Constitution forbade that we should levy duties upon imports except for revenue only.

It is a peculiar fact, in connection with this branch of the subject, that a tariff for revenue was not of American origin, that it came to us from Great Britain, and that our forefathers repudiated and resisted its application to the Colonies, while they never denied the right of the mother country to regulate commerce, and this right, including the power to levy protective duties upon imports, they ingrafted into the Constitution.

With the establishment of the new Government and the institution of protective duties prosperity sprang up on every hand, and the faces of the people, like the face of the country, wore a brighter and happier aspect. And so it has been during every period of protective duties in our country's history, while our periods of nearest approach to free trade have been times of disaster and distress. The history of protection is, indeed, its best champion, while the record of free trade remains to condemn it.

In 1883 we made more than $7,000,000,000 worth of goods, and paid to the men and women who were employed in their manufacture $1,500,000,000. This $7,000,000,000 was the product of our raw material and our labor. Our free-trade Democracy, could they have had their way, would have sent this money to Europe and left our resources undeveloped and our labor unemployed.

In 1884 we imported $668,000,000 worth of foreign goods, more than half of which was sold in our market in competition with goods of American manufacture. The money to pay for these goods was sent abroad. Every dollar of it should have remained here. It should have been paid to develop our own resources and to the willing hands seeking employment, and so have added to our country's wealth. The exportation of money is a direct tax upon our capital and labor. We should send abroad for nothing that we can with reasonable facility produce at home. There is but one reason for occupying a great country—that is, to develop its resources into actual wealth. The resources

of our own land are almost infinite in variety and extent. Why should we ignore them and let them lie dormant while we have an abundance of skillful labor that anxiously waits to be employed in their development?

Such a policy is cruelty to our people, and detrimental to the nation; it is as blind as the eyeless fish which are found in the sunless caverns of the earth. We must stand firm for our American revenue policy. The pro-British Democracy were never more aggressive and persistent in their attacks upon it than they are to-day. Let us be as brave and faithful in resisting them as were our forefathers in establishing the Constitution and the Union to crush the monster of free-trade, whose blighting influence upon American prosperity they had so sadly and bitterly experienced.

Our labor must not be pauperized, our manifold industries must not be sacrificed, our rich home market must not be surrendered to the foreigner. The hands of the toiler must be employed, and he must receive a just remuneration for his labor. The brain of the inventor must be stimulated by proper rewards. I have never seen wages too high. There is health to the country in the thrift of those who produce something of value. America must be for Americans, native and adopted; for those who till her soil, sail her ships, subdue her forests, develop her mines, raise her flocks and herds, build up and sustain her institutions, and turn her vast resources into means of comfort and happiness for her people.

We have before us the old question that came up so sharply during the Confederation. It is whether the American Congress shall protect Americans or make revenue laws in the interest of a foreign nation. I would reply, let us take good care of those who inhabit our own land. I know it is related that when Alexander the Great made known his purpose to build the city of Alexandria in Africa, and his people complained that he was about to establish a city which would compete with and injure his own country, he replied, "Mankind are my countrymen." It was a magnanimous reply, broader than patriotism. But we have no one so great as Alexander, and mankind are many more and have vastly greater interests to be cared for now than three hundred and twenty-five years before Christ. It would be worse than folly for us to attempt the task that Alexander so signally failed to accomplish. We can not take into our care all mankind. America must be for herself and her own, dealing fairly with all nations but surrendering her advantages to no one. Thus shall she grow strong and prosperous; thus shall she continue to be an asylum for the oppressed and a land of the free; thus shall her beneficence command the love of her people, and her justice and greatness challenge the admiration of the world.

Increase of the Naval Establishment.

SPEECH

OF

HON. PERRY BELMONT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 24, 1886,

On the bill (H. R. 6664) to increase the naval establishment.

Mr. BELMONT said:

Mr. CHAIRMAN: Although I shall vote for the substitute, I desire to say that I would gladly have supported the original bill of the Naval Committee had that committee presented it for the consideration of the House. I am earnestly in favor of any measure that will restore to the United States Navy its former efficiency, and therefore I shall vote for any proposition which looks toward its reconstruction upon principles sanctioned by modern experience and adapted to our national requirements.

So much has been said about the necessity of a navy as a precaution against war that I will claim the indulgence of the House for a few moments while I briefly recall some of the purposes to which our Navy has been and is applied in times of peace.

In the ports of Africa, South and Central America, the East and West Indies, and the islands of the Pacific it is absolutely essential for the protection of American commercial interests that our consular and diplomatic representatives should be able, if need be, to give weight to their just demands by the presence in those waters of United States ships of war. The Navy in its present condition is frequently unable to meet the requisitions made upon it by the State Department for vessels to assist consular officers at remote ports or to investigate occurrences upon which the Government might find it necessary to act. But among recent services of this kind which it has been able to render may be named the visit of the United States war steamer Lancaster to Tangiers, last year, to demand the release of two agents of Mr. William Howland, of New York, improperly held under duress; the visit of the United States war steamer Wachusett to Guayaquil, Ecuador, last year, to investigate the imprisonment of Julio Santos, a naturalized citizen of the United States, since released on the peremptory demand of the State Department; and the protection afforded American missionaries in China in January last by the United States war steamer Marion, at the request of the United States consul at Ching-Kiang through the Secretary of State.

The presence of United States men-of-war has frequently prevented threatened disturbances, which, unrepressed, might have led to serious results; and the moral influence of the neighborhood of a United States cruiser has been potent in securing justice for American citizens from those who recognize no other argument but a display of force.

The navies of the maritime powers are the police of the high seas, and every civilized nation with an ocean seaboard is in honor bound to furnish its quota for the general good. They act in concert to put down piracy, to maintain inviolate the free navigation of the ocean as the common highway of nations, and to prevent traffic condemned by general consent of civilized powers as against public morals. Some of the past achievements of the American Navy in this regard, in the suppression of the slave trade on the coast of Africa and of the piratical tribute levied by the Barbary powers in the Mediterranean, are among the most noticeable features in our early history.

Vessels of the United States Navy have often served as a refuge for American citizens in countries where war was imminent or actually in progress, and in cases of shipwreck, earthquakes, and other calamities. Hundreds of lives were saved by the presence of the American squadron at Alexandria, Egypt, in June and July, 1882. The United States man-of-war Shenandoah rendered valuable service in protecting American interests jeopardized at Mollendo, Peru, in 1885. The United States man-of-war Wachusett protected the American cable in Central America during the same year. Vessels of the United States Navy rendered humane assistance to the sufferers by the terrible earthquakes at Arica and Chios. The United States war steamer Swatara, in March, 1885, was specially dispatched to Guatemala to rescue seventy-eight destitute Americans, and the Lancaster has recently been sent to Madagascar and the Comorro Islands to rescue the crew of the American barque Surprise. The list of humanitarian services performed by our Navy for citizens of the United States abroad might be almost indefinitely extended.

The United States, by treaty obligation, is bound to maintain the free transit of the Isthmus of Panama, and has been repeatedly compelled to employ a naval force for this purpose. Whatever may be the outcome of the different plans of crossing the Isthmus, it is obvious that the United States, if it desires to carry out the obligations it has solemnly assumed, must maintain a sufficiently strong naval force to sustain the protectorate over the Isthmus it has so frequently asserted in Congress and elsewhere.

Our Navy has been conspicuously identified with geographic and hydrographic researches, and the results accomplished by its means have been of great advantage to civilization. As to ante-bellum services, I need only instance the Wilkes exploring expedition of 1839, the John Rodgers exploring expedition of 1853, the Perry expedition to Japan of the same year, and Lieutenant Maury's discoveries as to the currents of the ocean.

In more recent times, we have had effected by the instrumentality of officers of the Navy a complete survey of all the transit routes of the American Isthmus. The path of commerce has been made easier by the charting of shoals and other dangers to navigation in distant channels and harbors. Deep-sea soundings have advanced scientific knowledge and greatly simplified the work of ocean cable laying; and the chronometers and other navigating instruments of mariners all over the country have been corrected by the observations of our naval officers. The gallant part taken by the Navy in the relief of polar explorers is recent history, as is also the valuable aid rendered in many astronomical expeditions.

Our existing Navy, of twenty three commissioned vessels, is divided into five squadrons, employed as follows:

The North Atlantic squadron, consisting of the Tennessee, the Galena, the Swatara, and the Yantic, is at Portland, Me., awaiting orders. This is an obviously proper disposition, in view of the pending fisheries question.

Of the European squadron, the Kearsage and the Pensacola are at Constantinople, and the Quinnebaug has been lying off Lisbon at the request of our minister to Portugal and at the suggestion of the State Department.

The Omaha, the Ossipee, and the Alert, of the Asiatic squadron, under orders from the Navy Department, are at Yokohama, Japan, for court-martial purposes; the Marion is at Foo Chow, and the Monocacy at Canton, China, for the protection of American interests, at the request of United States consuls; the Palos has been detailed to convey our minister to the Corea; and the Trenton is on her way home under orders, touching at several ports to display the flag and to inquire after American interests.

The seven vessels composing the Pacific squadron are stationed as

follows: The Hartford and Adams are at Payta, Peru, where it will readily be believed from recent events there is reason for their presence; the Shenandoah is *en route* for San Francisco, stopping at ports in Central America; the Mohican is at Samoa, at the request of the State Department; the Iroquois and the Monongahela are at Callao and Coquimbo, Peru, respectively, looking after American interests; and the Pinta is at Alaska, where it has rendered valuable service to the Territorial government of that remote possession.

Of the two vessels composing the South Atlantic squadron the Lancaster is on her return from the east coast of Africa, where she went to investigate certain matters at the request of the State Department, and the Tallapoosa is off the coast of Brazil.

I am quite certain many will agree with me, Mr. Chairman, that the powers and influence of our Navy ought to be greatly extended beyond the limits thus disclosed. The United States Government is so strong in itself and so strong in the policy, from which I trust it will never deviate, of abstaining from interference with other powers, that it is not necessary for it to attempt to keep pace with cumbrous and costly experiments of other nations by the construction of floating fortresses in the disguise of ships. But it is absolutely necessary, not only for the maintenance of our international obligations, but for the protection and development of our commerce, that a serviceable navy of swift-sailing, well-armed cruisers should be established to replace the vessels that are now doing duty in foreign waters as the representatives of the naval power of the United States, and the experimental iron-plated batteries constructed during the war, which to a large extent are now unseaworthy.

We are not courting war, Mr. Chairman; we are not expecting it. All that is asked is that the American Navy may be so re-established that it will represent more adequately the power and resources of the nation.

Private Claims in Congress.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 4, 1886.

The House having under consideration the report of the conference committee on the disagreeing votes of the two Houses on the bill for the relief of the Phœnix National Bank, of New York—

Mr. SPRINGER said:

Mr. SPEAKER: I desire to state briefly the substance of this report, and then I am sure the gentleman from Missouri [Mr. GLOVER] will not object.

In 1861 there was deposited by the Georgetown Bank, of South Carolina, in the Phœnix Bank of New York, $12,000. The Congress of the United States passed a law confiscating all such deposits in Northern banks that were owned by citizens in the Southern States. A check was presented shortly after that act was passed to the Phœnix Bank for this money, and the bank refused to pay on the ground that proceedings *in rem* had been instituted by the United States against these deposits and the money had been paid over to the United States marshal.

Soon after the close of the war the party holding the check of the Georgetown Bank brought suit against the Phœnix Bank to recover this money. The case was taken through all the courts of the State of New York and finally to the Supreme Court of the United States, which court held that the plea of the Phœnix Bank that this money had been confiscated by a proceeding *in rem* was not good, and entered a judgment against the bank compelling the bank to pay the sum of money to the private depositor. He recovered a judgment against the bank for the amount originally deposited and the interest allowed in the State of New York from the time the check was presented until the judgment was paid. The interest was paid under the judgment of the State of New York from the time the check was presented until the judgment was paid, amounting in the aggregate, the whole amount of the judgment and the costs, to the sum which is recommended to be passed.

Before the vote is taken on agreeing to this report I want to state in reference to private bills that we have been able, owing to the great pressure of public business here, to consider only a small number of the vast mass of such cases that have been brought before us during this session of Congress. There have been introduced into this House during this session 10,014 bills and 214 joint resolutions, in all 10,228. Of these 7,650 were private and 2,578 were public bills.

I call attention to the following statement showing the introduction of bills and other business of the first session of this Congress as compared with both sessions of the Forty-eighth Congress:

Forty-ninth Congress, first session:	
House bills introduced	10,017
House joint resolutions introduced	216
Total	10,233
House reports	3,475
Senate bills introduced	2,891
Senate joint resolutions introduced	83
Total	2,974
Number of public bills which became laws	183
Public joint resolutions which became laws	35
Number of private bills which became laws	752
Private joint resolutions which became laws	3
Total	973

The House has passed 95 public bills and 7 public joint resolutions; also 146 private bills and 3 private resolutions, which have not been acted upon by the Senate.

The Senate has passed 192 public bills and 7 public joint resolutions; also 325 private bills and 4 private resolutions which have not been acted upon by the House.

This statement does not include 75 House bills and 38 Senate bills which have been vetoed, and 4 Senate bills and 4 House bills and 1 House joint resolution (surplus) which have been pocketed; also 1 House joint resolution (distribution of the Official Register) which was not received by the President until five minutes after 4 o'clock on the day of adjournment.

Forty-eighth Congress, first session:	
Bills introduced	7,509
Joint resolutions	287
Total	7,796
Forty-eighth Congress, second session:	
Bills introduced	781
Joint resolutions	60
Total	841
Total number of bills and joint resolutions introduced in Forty-eighth Congress	8,637
Reports made to Forty-eighth Congress:	
First session	2,165
Second session	532
Total	2,697

During the first session of the last Congress there were introduced in both Houses 7,509 bills and 287 joint resolutions, making a total of 7,796; being an increase of 5,411 bills at this session over the whole number introduced during the first session of the last Congress. The cost of the printing of these bills, private and public, at this session has amounted to over $80,000.

Mr. Henry H. Smith, the Journal Clerk of the House of Representatives, in an article published in the Chicago Current of December 5, 1885, thus referred to the subject of private legislation in Congress:

The present membership of the House is three hundred and thirty-three—including eight Delegates—an increase of two hundred and sixty members since the First Congress. The steady increase of business in the House has kept pace with the increase of representation, and will undoubtedly continue. "From the organization of the Government," said Speaker CARLISLE in his valedictory address on the 4th of March last, "to the Twenty-fifth Congress, a period of fifty years, there were introduced into the House 8,777 bills and joint resolutions, while during the Forty-eighth Congress there were 8,637, almost as many as during that half century."

Referring to the fact that the House was compelled to leave unfinished so large a percentage of its business, he said:

"It is evident that unless some constitutional or legislative provision can be adopted which will relieve Congress from the consideration of all, or at least a large part, of the local and private measures which now occupy the time of the committees and fill the calendars of the two Houses, the percentage of business left undisposed of at each adjournment must continue to increase from year to year. It is not reasonable to suppose that an alteration of the Constitution can be effected, but it is worthy of serious consideration whether a general law might not be enacted which would authorize the several Executive Departments and the courts of justice to hear and determine these matters under such rules and regulations as would amply protect the interests of the Government and at the same time secure to the citizen a more expeditious and appropriate remedy than is now afforded. If this shall be done, time and opportunity will be afforded here for the deliberate consideration of those great public questions which the Constitution has committed to the legislative department, and something might be done to promote the welfare of the whole people without neglecting the special interests of any."

Of the 8,637 bills introduced in the last Congress of the House 6,329 were of a private character, and an examination of the journals shows that about 10 per cent. of these bills have been introduced in former Congresses, and that fully 40 per cent. have at various times been favorably reported. As 1,848 copies of each bill are printed, the cost alone is a very considerable item, approximating $100,000 a Congress. The following table shows that, in spite of the steady increase in the number of bills introduced in Congress, the relative number which be-

cause laws have steadily fallen off, with the exception of the last two Congresses, when a very unusual number of private pension bills were passed:

Congress.	Bills.	Acts.	Per cent.
Thirty-eighth	1,608	515	31
Thirty-ninth	2,358	619	26
Fortieth	3,723	769	21
Forty-first	5,314	772	14½
Forty-second	5,943	1,015	17
Forty-third	6,435	856	13
Forty-fourth	6,230	712	11
Forty-fifth	8,736	742	8½
Forty-sixth	10,067	450	4½
Forty-seventh	10,704	772	7
Forty-eighth	11,441	966	8

Of the 966 bills which became laws in the last Congress 682—nearly two-thirds—were of a private character, of which 588 were pension bills. Urgent recommendations have been made by Presidents Grant, Hayes, and Arthur in their annual messages to Congress for legislation that would relieve both Congress and the Departments from the burden of a large class of private claims, but, beyond the passage of the "Bowman bill"—which affords but slight relief—nothing has been done.

I call the attention of the House to these facts for this reason, that our present system of dealing with private bills is a denial of justice to the claimants and ought to be abandoned at once. I hope the time is not far distant when Congress will see fit to establish some tribunal by which all who have claims against the United States can go into a court of justice and have those claims adjudicated in accordance with the rules provided in the courts.

In 1874 the subject began to attract the serious attention of Congress and the country. At that time Mr. John W. Forney, who had large experience in Congressional legislation, was the editor of the Washington Chronicle, a newspaper published in this city. I ask attention to an editorial which appeared in that paper at that time, as follows:

We call attention to an article printed in the Chronicle this morning from the pen of an able and experienced member of Congress on the subject of the proper disposition of private claims pending before the two Houses, which is well worth careful perusal on the part of his fellow-members.

It was not our purpose in the article to which our honorable friend refers to censure the members generally for inattention to this branch of their public duty. No doubt it now receives an equitable share of the time of the hard-working members, of whom the writer is known to be one of the most indefatigable. It is to be regretted that all do not, perhaps can not, work with the same degree of effectiveness. The capable and industrious ought not, certainly, to be condemned on account of the incapacity or indolence of others of their associates.

And it is a truth, that the most capable Senators and Representatives of experience will heartily indorse, that a committee of Congress is, in many respects, an unfit and unsafe place for the adjudication of such causes, unfit because the members of committees will not attend and give their attention to the business. The whole work, consequently, devolves on a few persons, who can not carefully examine all the cases of this description sent to them for investigation. And the small part which is reported can not, as the writer shows, secure the deliberate consideration of the House and Senate, so that the bulk of the work performed by the committees is not finally acted on by the Congress to which it is submitted, and must be abandoned by the claimants, or continue to be presented from Congress to Congress, constantly accumulating in magnitude.

It is an unfit place, because an adverse decision does not necessarily terminate the application of the claimant for redress. He is almost certain to attribute his defeat to the stupidity or inattention of committeemen, rather than the badness of his cause. And if not broken down in his finances he is almost certain to return in person or by agent, or through the interposition of his Representative or Senator, year after year, with the hope of better luck. Hence, it has become a sort of axiom at the national capital that no claim presented to Congress can ever be effectually disposed of except by its payment, while an adverse decision by a court after a full hearing would end it forever.

A committee of Congress is an unfit tribunal, because the testimony submitted is nearly always *ex parte* and in favor of the applicants for relief, no one being interested who has facilities for taking testimony in favor of the Government. This, being well known to Senators and Representatives, has induced a habit with many of systematically voting against all private claims, however just they may appear on their face and well supported by evidence, believing that the Government side has not been fully represented.

It would, therefore, be far better for honest and meritorious claimants, as well as for the Government, to have all the claims referred to a court properly constituted—a course which appears to the committees of Congress to possess intrinsic merits.

With the exception of what is known as the Bowman act nothing has been done to relieve Congress from the burden of private legislation. The Bowman act is practically inoperative, owing to the fact that no claims can be considered under it which are barred by the statute of limitations. An effort has been made at this session to enlarge the provisions of that act, and also to afford other relief to claimants. The Committee on Claims of this House has reported a bill (H. R. 5314), which remains unreached on the Calendar, "conferring jurisdiction upon the Court of Claims to investigate private and domestic claims and demands, other than war claims, against the United States." The Committee on the Judiciary has reported a bill (H. R. 6974) "to provide for the bringing of suits against the United States," and the Senate passed a bill (S. 2643) supplemental to the Bowman act, which is now pending before the Committee on Claims of this House. Without anticipating the action of the committee I would suggest that the Senate bill referred to be amended by incorporating the provisions of the two House bills just mentioned. The amended bill would then be as follows:

A bill supplemental to an act approved March 3, 1883, entitled "An act to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government."

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever any bill shall be pending in either House of Congress providing for the payment of a claim against the United States, legal or equitable, or for a grant, gift, or bounty to any person, the House in which such bill is pending may refer the same to the Court of Claims, who shall proceed with the same in accordance with the provisions of the act approved March 3, 1883, entitled "An act to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government," and report to such House the facts in the case and the amount, where the same can be liquidated, including any facts bearing upon the question whether there has been delay or laches in presenting such claim or applying for such grant, gift, or bounty, and any facts bearing upon the question whether the bar of any statute of limitation should be removed, or which shall be claimed to excuse the claimant for not having resorted to any established legal remedy.

Amend the said Senate bill by adding thereto the following as additional sections, taken from House Claims Committee bill:

SEC. 2. That at the adjournment of each Congress, all bills relating to private and domestic claims and demands, against the United States, which may be pending in either House of Congress or before any committee of either House, shall, by the Secretary of the Senate and the Clerk of the House, respectively, be referred to the Court of Claims, together with all papers relating thereto, as hereinbefore provided; and all such claims and demands shall be investigated by the court as provided by law. The Secretary of the Senate and the Clerk of the House shall enter in the Journals of the respective Houses, and in the CONGRESSIONAL RECORD, a statement showing what bills have been so transferred.

SEC. 3. That after the passage of this act neither House of Congress shall consider or entertain, for any purpose other than that of referring the same to some judicial tribunal or commission under existing law, any private or domestic claim or demand against the United States which involves the investigation of facts, until such facts shall have been investigated by such judicial tribunal or commission and the findings of facts reported to Congress.

SEC. 4. That it shall be the duty of the Attorney-General, or his assistants under his direction, to appear for the defense and protection of the United States in all cases which may be transmitted to the Court of Claims under this act, or the act to which this is an amendment.

SEC. 5. That reports of the Court of Claims to Congress under this act, and the act to which this is an amendment, if not finally acted upon during the session at which they are reported, shall be continued from session to session and from Congress to Congress until the same shall be finally acted upon.

Also add the following sections, taken from the House Judiciary Committee bill:

SEC. 6. That the Court of Claims shall have jurisdiction to hear and determine the following matters:

First. All claims founded upon the Constitution of the United States, or any law of Congress, or any regulation of an Executive Department, or upon contract, expressed or implied, with the Government of the United States, or for damages, liquidated or unliquidated, in respect of which claims the party would be entitled to redress against the United States either in a court of law, equity, or admiralty if the United States were suable, and of all other claims which may be referred to it by either House of Congress.

Second. All set-offs, counter-claims for damages, whether liquidated or unliquidated, or other demands whatsoever on the part of the Government of the United States against any person making claim against the Government in said court: *Provided*, That no suit against the Government of the United States shall be allowed under this act unless the same shall have been brought within six years after the right accrued for which the claim is made.

SEC. 7. That the circuit and district courts of the United States shall have concurrent jurisdiction, as to all matters named in the preceding section, with the Court of Claims, where the amount of the claim shall not exceed the sum of $10,000 in money value.

SEC. 8. That the jurisdiction of the respective courts of the United States proceeding under this act shall be governed by the provisions of statutes now in force, in so far as the same are found applicable and not inconsistent with the provisions of this act; and the course of procedure shall be in accordance with the established rules of said respective courts, and of such additions and modifications thereof as said courts may adopt.

SEC. 9. That the plaintiff in any suit brought under the provisions of the seventh section of this act shall file a petition, duly verified, with the clerk of the respective court having jurisdiction of the case, and in the district where the plaintiff resides or where the cause of action arose. Such petition shall set forth the full name and residence of the plaintiff, the nature of his claim, and a succinct statement of the facts upon which the claim is based, the money or other thing claimed or the damages sought to be recovered, and praying the court for a judgment or decree upon the facts and law.

SEC. 10. That the plaintiff shall cause a copy of his petition filed under the preceding section to be served upon the district attorney of the United States in the district wherein suit is brought, and shall mail a copy of the same, by registered letter, to the Attorney-General of the United States, and shall thereupon cause to be filed with the clerk of the court wherein suit is instituted an affidavit of such service and the mailing of such letter. It shall be the duty of the district attorney upon whom service of petition is made as aforesaid to appear and defend the interests of the Government in the suit, and within sixty days after the service of petition upon him, unless the time should be extended by order of the court made in the case, to file a plea, answer, or demurrer on the part of the Government, and to file a notice of any counter-claim, set-off, claim for damages, or other demand or defense whatsoever of the Government in the premises; and the issue shall be tried in accordance with the ordinary rules of the court governing the trial of like issues in other causes: *Provided*, That should the district attorney neglect or refuse to file a plea, answer, demurrer, or defense as required, the plaintiff may proceed with the case under such rules as the court may adopt in the premises; but the plaintiff shall not have judgment or decree for his claim, or any part thereof, except on satisfactory evidence.

SEC. 11. That all issues of fact arising in suits at law prosecuted under the seventh section of this act shall be tried by a jury, unless a trial by jury is expressly waived by the parties to the suit or their attorneys. After verdict has been rendered in the suit at law in the district or circuit courts of the United States, it shall be the duty of the court to cause a written opinion to be filed therein setting forth the specific findings by the court or jury on the facts alleged in the petition, and the conclusions of the court upon all questions of law involved in the case, and to render judgment thereon. If the suit be in equity or admiralty the court shall proceed with the same according to the rules of such courts.

SEC. 12. That in the trial of any suit brought under any of the provisions of this act, no person shall be excluded as a witness because he is a party to or interested in said suit; and any plaintiff or party in interest may be examined as a witness on the part of the Government.

Sections 1079 and 1080 of the Revised Statutes are hereby repealed.

SEC. 13. That the plaintiff or the United States, in any suit brought under the provisions of this act, shall have the same rights of appeal or writ of error as are now reserved in the statutes of the United States in that behalf made, and upon the conditions and limitations therein contained. The modes of procedure in claiming and perfecting an appeal or writ of error shall conform in all respects, and as near as may be, to the statutes and rules of court governing appeals and writs of error in like causes.

SEC. 14. That when the findings of fact and the law applicable thereto have been filed in any cause as provided in section 11 of this act, and the judgment or decree is adverse to the Government, it shall be the duty of the district attorney

to transmit to the Attorney-General of the United States certified copies of all the papers filed in the cause, with a transcript of the testimony taken, the written findings of the court, and his written opinion as to the legality and justice of the verdict or finding; whereupon the Attorney-General shall determine and direct whether an appeal or writ of error shall be taken or not; and when so directed the district attorney shall cause an appeal or writ of error to be perfected in accordance with the terms of the statutes and rules of practice governing the same: *Provided*, That no appeal or writ of error shall be allowed after six months from the judgment or decree in such suit. From the date of such final judgment or decree interest shall be computed thereon, at the rate of 4 per cent., until the time when an appropriation is made for the payment of the judgment or decree.

SEC. 15. That the Attorney-General shall report to Congress, and at the beginning of each session of Congress, the suits under this act in which a final judgment or decree has been found adverse to the Government, giving the date of each, with a statement of the costs taxed in each case.

SEC. 16. That whenever there shall be pending before the Department of State a claim in behalf of any alien against the United States, founded on or growing out of any treaty with a foreign power or any international obligation, the Secretary of State may, with the consent of the representative of the government of such alien, refer such claim to the Court of Claims, which shall thereupon have jurisdiction to hear and determine the same upon the principles of justice and international law, and to render such judgment as those principles shall require. From any such judgment either party may appeal to the Supreme Court in the manner provided by law in other cases of appeal from the Court of Claims.

SEC. 17. That when any claim or matter may be pending in any of the Executive Departments which involves controverted questions of fact or law, the head of such Department, with the consent of the claimant, may transmit the same, with the vouchers, papers, proofs, and documents pertaining thereto, to said Court of Claims, and the same shall be there proceeded in under such rules as the court may adopt. When the facts and conclusions of law shall have been found, the court shall enter judgment thereon, and shall report its findings and judgment to the Department by which it was transmitted.

SEC. 18. That in every case which shall come before the Court of Claims under the provisions of an act entitled "An act to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government," approved March 3, 1883, if it shall appear to the satisfaction of the court, upon the facts established, that it has jurisdiction to render judgment or decree thereon under existing laws or under the provisions of this act, it shall proceed to do so, and report its proceedings therein to either House of Congress or to the Department by which the same was referred to said court.

SEC. 19. That the costs of court in proceedings under this act shall be taxed in favor of the prevailing party therein, unless otherwise specially ordered by the court. For failure to prosecute a petition filed under this act with reasonable diligence, the same may be dismissed, in the discretion of the court.

SEC. 20. That all laws and parts of laws inconsistent with this act are hereby repealed.

Amend the title so that it will read as follows:

A bill to provide for the investigation and adjudication of claims and demands against the United States, and for other purposes.

At the next session of Congress I hope something will be done to relieve Congress from the increasing burden of private legislation. I ask the attention of members to this subject during the approaching vacation, and I will print as a part of my remarks the bills mentioned in order that the whole subject may be considered.

One step further than the proposed legislation will be required before Congress will obtain perfect relief from the accumulating mass of private bills. That step is a constitutional amendment prohibiting special legislation by Congress. I have proposed such an amendment, and it is now pending before the Committee on the Judiciary of this House. It is as follows:

ARTICLE —.

SECTION 1. The legislative power of the United States is limited to the enactment of laws general in their application and effect to all sections and persons within the jurisdiction of this Constitution. All local, private, or special enactments, hereby prohibited, shall be null and void.

SEC. 2. All claims against the United States shall be adjudicated and determined by such tribunal or tribunals as Congress may establish for that purpose.

If Congress will pass the bills referred to and submit a constitutional amendment to the States for ratification, I believe it will receive prompt approval. No greater reform could be inaugurated. The immense mass of bills now pending, and the great increase of such from session to session, admonish us that some new departure is demanded. The whole subject of private legislation must be driven from the Halls of Congress, and the people's representatives must be relieved of this burden and be permitted to devote their whole time and attention to subjects of national importance.

Labor Arbitration.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, March 31, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property and passengers and their employés.

Mr. WHEELER said:

Mr. CHAIRMAN: One hundred and ten years ago, thirteen years before the Constitution was framed, a body of men endowed with virtue, honor, and courage met together, and to attain a grand purpose they pledged to each other their lives, their fortunes, and their sacred honor. These men said:

We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments were formed among men, deriving their just powers from the consent of the governed.

These words came from the pen of Thomas Jefferson, the great apostle of the democratic idea of man's right and ability to govern himself. The Government, based upon such principles, founded by Jefferson and men like him, baptized in blood, cradled in adversity, and reared in suffering, has become a great democratic republic, a refuge for the oppressed of all the world, a government of the people, by the people, and for the people; and for eighty-seven years the laws under which they lived were but the reflections of the wishes of those who were governed by those laws, willingly submitting to their restraints and gratefully accepting their blessings. During all that period we had peace, happiness and prosperity. Since the termination of that blessed era we have had a different form of government. The laws have not been for the benefit of the many; they have been for the advantage of the few, and for the few of specially favored sections. They have tended to make the few very rich and the many very poor; and to-day we see the victims of this unjust legislation banded together demanding what they believe to be justly due them.

For twenty-five years the tendency of all legislation has been against those who labor and in favor of the capital which employs labor. And now the laboring masses come and ask for a law which they hope will ameliorate their condition. In 1830 Daniel Webster condensed the principles of the Declaration of Independence in these words:

The people's government, made for the people, made by the people, and answerable to the people.

In 1850 Theodore Parker adopted the idea in these words:

A government of all the people, by all the people, for all the people.

In 1863 the sentiment was repeated by Mr. Lincoln, who said:

And that government of the people, by the people, for the people, shall not perish from the earth.

And in 1886 let the American Congress emphasize this grand idea by the enactment with unanimous voice of laws to protect the rights of the people.

I believe, Mr. Chairman, that if not another law was enacted for fifty years to protect capital that it would be amply protected by the laws that now stand on the statute-books, and in that belief I shall advocate all measures which are calculated to improve the condition of those who work.

For this reason I shall vote for the bill now being considered, although it is not all that I desire; and for the same reason I support and advocate the bill to aid our common schools, and thus place at least the rudiments of education within the reach of the children of the laboring people of our country.

Coast Defenses and their Armament.

SPEECH
OF
HON. JOSEPH R. HAWLEY,
OF CONNECTICUT,
IN THE SENATE OF THE UNITED STATES,
Wednesday, July 28, 1886.

The Senate, as in Committee of the Whole, having under consideration the bill (H. R. 9798) making appropriations for fortifications and other works of defense, and for the armament thereof, for the fiscal year ending June 30, 1887, and for other purposes—

Mr. HAWLEY said:

Mr. PRESIDENT: I may as well say what I have to say upon the general question now, before the adoption of the pending amendment, for the second and fifth sections are both involved in one discussion. I hesitate a good deal about occupying the time of the Senate, because it is late in the session; but the Senator from Massachusetts [Mr. DAWES] and the Senator from Kentucky [Mr. BECK] have both very kindly suggested that I should in some measure repeat what I said before the committee. If it will help to inform or convince anybody here or help the measure elsewhere, I shall be very glad to do it. The danger is that having read and heard so much about it, and being so much interested in it, I may talk too long. I shall be willing to be checked, and I shall esteem any question by a Senator as a favor.

I hardly need to lay down the proposition, for everybody already knows it, that the country is to-day practically defenseless. Though it be so now, there was a time when this country was with the foremost of all the world in the excellence and the relative cost of its coast defenses and their armament. I do not know how we lived just after the Revolution until about 1816, but between 1816 and 1826 there was adopted a general system of coast defense. Under it we built strong granite and brick forts, some with walls 8 feet thick, but thinning down to 5 feet near the embrasures, and good against the guns of those days. The system was excellent, and for the numbers and wealth of the people it was costly. There is not one of those old fortifications, which

were formerly a matter of great national pride, that is anything more than a death-trap to-day when faced by the best modern weapons.

We have been considering our coast and naval defenses ever since the war of the rebellion. It is fortunate for us now that we have done nothing. Divine Providence has saved us from any serious controversy with any foreign nation. In the mean time all the great nations of Europe, whose several existences depend upon their keeping up with the highest state of the military art, have been spending money by the millions and tens and scores, yes, and hundreds of millions, constantly following the progress of invention, abandoning to-day what cost them millions yesterday, and jumping to-morrow to meet the newest idea. All they have expended is as fully for our benefit as if it had been spent by ourselves. They have reached a stage in the arts of offense and defense that no longer excuses delay on our part. They have come to certain conclusions with regard to works of defense and the armament thereof which are not likely to be very seriously, at any rate essentially, disturbed within a few years. Whatever we build or make now can not very soon become useless.

There have been a surprising number of investigations and reports upon these subjects. Every year our engineer officers have pointed out to us the defenseless condition of the coast and have asked us to do this, that, and the other thing, now in forts and then in guns. On the whole, I am very glad we did not follow their advice. At the time it would have been apparently wise to do it, but we now see that we have no need for what we should have done a few years ago.

Within a few years there have been several boards especially appointed and instructed to inquire into the general question. They have inquired so thoroughly and are so nearly agreed that I must briefly notice them. And first, the "armament board," so-called, organized under the appropriation act of July 5, 1884, and instructed thereby—

To cause the various calibers, lengths of bore, greatest and least admissible weights of guns for each caliber, together with the greatest and least weights of projectiles for each caliber, of all the various calibers required for the service, together with the number of each caliber of gun required, to be determined, and to make the same known to manufacturers of ordnance on their application and to report the same to Congress at its next session for its approval.

On that board were such officers as Col. Thomas G. Baylor, Ordnance Department; Col. James C. Duane, Corps of Engineers; Maj. William R. King, Corps of Engineers; Maj. George W. McKee, Ordnance Department; Capt. Charles Shaler, Ordnance Department, and Capt. Edward Maguire, Corps of Engineers. Their report was transmitted to Congress December 5, 1884, and printed as Senate Executive Document No. 5, Forty-eighth Congress, second session.

That very able board after full deliberation recommended a series of heavy steel guns, beginning with 8 inches caliber running up to 16 inches caliber and adding thereto a 12-inch mortar. They gave an estimate of the weights of guns, charges, projectiles, velocity, penetration, &c.

The tabular statements are as follows:

TABLE I.

Caliber.	Number of each caliber.	Length of—			Weight of gun.	Weight of projectile.	Weight of charge.
		Bore.		Gun.			
Inches.		*Calibers.*	*Feet.*	*Feet.*	*Tons.*	*Pounds*	*Pounds.*
8	125	30	20	21.5	13	285	100
10	226	30	25	26.875	25	575	225
12	306	32.06	32.06	35.11	48	804	456
16	50	31.74	41.67	45.93	107.77	1,631.4	650.4
12" mortar	512	9	9	10.33	13.06	610	52

TABLE II.

Caliber.	Velocity of projectile in feet per second at—							
	Muzzle.	1,000 yards.	2,000 yards.	3,000 yards.	4,000 yards.	5,000 yards.	6,000 yards.	7,000 yards.
Inches.								
8	1,800	1,639	1,488	1,350	1,230	1,129	1,049	995
10	1,900	1,767.7	1,642.2	1,523.3	1,410.9	1,308.5	1,217.5	1,138.6
12	1,853	1,731.2	1,641	1,508.5	1,405.1	1,310.2	1,225.5	1,150.9
16	1,985	1,865	1,750	1,641	1,536.9	1,437.1	1,344.5	1,260.6

TABLE III.

Caliber.	Penetration of wrought iron in inches at—							
	Muzzle.	1,000 yards.	2,000 yards.	3,000 yards.	4,000 yards.	5,000 yards.	6,000 yards.	7,000 yards.
Inches.								
8	16.43	14.97	13.63	12.40	11.31	10.39	9.67	9.19
10	21.08	20.38	18.96	17.61	16.33	15.16	14.13	13.23
12	24.34	23.68	21.21	19.81	18.47	17.25	16.15	15.18
16	30.49	28.96	26.95	25.29	23.71	22.20	20.74	19.52

The following table will give an approximate estimate of the rough-bored, turned, and tempered steel required for the guns recommended by the armament board:

Kind.	Caliber.	Number.	Weight, each.*	Total weight.
	Inches.		*Tons.*	*Tons.*
Breech-loading rifles	8	125	14	1,750
Do	10	226	31	7,006
Do	12	306	53	16,218
Do	16	50	131	6,550
Rifled mortars	12	512	14	7,168
Total				38,692

*Approximate.

These figures do not vary materially from what would be adopted now by the best judges.

The next board is known as the gun foundry board of which we have heard so much, which was organized under the naval appropriation bill of March 3, 1883, making appropriations for the fiscal year ending June 30, 1884, and for other purposes, being authorized by the following paragraph of that act:

That the President of the United States is hereby authorized and requested to select from the Army and Navy six officers, who shall constitute a board for the purpose of examining and reporting to Congress which of the navy-yards or arsenals owned by the Government has the best location and is best adapted for the establishment of a Government foundry, or what other method, if any, should be adopted for the manufacture of heavy ordnance adapted to modern warfare, for the use of the Army and Navy of the United States, the cost of all buildings, tools, and implements necessary to be used in the manufacture thereof, including the cost of a steam-hammer or apparatus of sufficient size for the manufacture of the heaviest guns; and that the President is further requested to report to Congress the finding of said board at as early a date as possible: *Provided*, That no extra compensation shall be paid the officers serving on the board hereby created.

This covers a wider ground, but includes the question we are now discussing. Let me remark incidentally that they were required to report upon a steam-hammer. Such has been the progress in Europe that now we do not care to know what a steam-hammer would cost excepting the comparatively smaller size for certain minor purposes. A better process has superseded the great steam-hammer for most of the heavy work in ordnance.

The board was composed of the following persons: Commodore Edward Simpson, United States Navy, president; Capt. Edmund O. Matthews, United States Navy; Col. Thomas G. Baylor, Ordnance Department, United States Army; Lieut. Col. Henry L. Abbot, Engineer Corps, United States Army; Maj. Samuel S. Elder, Second Artillery, United States Army; Lieut. William H. Jaques, United States Navy, secretary—all able men and specially informed upon these subjects. That report was made to the President February 16, 1884, and is known as House Executive Document No. 97, first session Forty-eighth Congress. A supplementary report was made December 20, 1884. They were printed together as Senate Executive Document No. 13, second session Forty-eighth Congress.

The conclusions of the gun foundry board have been read to you. They are substantially that we are to make hereafter only forged steel guns of the general classes described; that we ought to enter upon their manufacture immediately; that the great manufacturers of the country stand ready to reproduce the best and heaviest guns known to the world upon satisfactory contracts being offered, and that these great manufacturers will not begin the work, will not invest the large sum necessary for new machinery depending upon an annual appropriation from Congress. Nor would any sensible business man do it.

They say if the Government wishes to contract for a large number of tons of forged steel to be furnished during a series of years the manufacturers will assent. They will agree to spend from five hundred thousand to a million and a half of dollars in putting down a plant; the Government to inspect the work, inspect at every stage, and to pay only as satisfactory forgings are delivered.

The gun foundry board further reported that this work ought to be divided between private parties and the Government as the most economical way, as almost the only certain way of getting it. Suppose the Government undertakes the whole operation of gun-building. Then it must have that which it never has had—enormous furnaces and forges, processes for the manufacture of this steel from the ore up to the heavy forgings, and also the plant necessary to what is called a gun-factory, but which will be better understood if I call it the finishing and assembling factory, where the rough-bored, rough-turned, and tempered parts are finished to the finest gauge, and shrunk together or assembled as the finished gun. The Government will not undertake that; it ought not to; it would be an expensive and unnecessary work. It is far better that all the preliminary stages of manufacture should be conducted by private parties.

The gun foundry board reported that this work ought to be so divided. It would be matter for congratulation if there were private establishments like those of Krupp, at Essen, Germany, and Schneider & Co., at Le Creusot, in France, and Sir William G. Armstrong, Mitchell

& Co., Newcastle-upon-Tyne, in England, who would take a contract for a whole gun, delivering the perfected work; but there is nobody to do it. There is nobody prepared to undertake either the first or second stage, and citizens undertaking the whole would have to contemplate very heavy investments.

They would rather divide it; they would rather take a lighter risk. So that on the whole every board that has discussed this subject has come to the conclusion that we can very easily get from private establishments rough parts of a great variety of guns such as we need, and bring them together in a Government establishment, there finishing, assembling, and perfecting the guns. Furthermore, it is considered that it is better on the whole that there should be two of these factories, or finishing establishments. The needs of the Army and Navy are somewhat different. Too great a variety of guns is undesirable, and it is to be hoped that those who administer this law will see that as far as possible the Army and Navy use the same calibers, and that the same gauges are used upon the same calibers, so that projectiles of the same nominal caliber may be interchangeable between land and naval forces. Circumstances not infrequently make this a convenience and economy.

The guns we have now in forts and arsenals are of nine varieties and require thirty-three kinds of ammunition. The naval great guns are of twenty-two varieties, and they require thirty kinds of ammunition. But it must be admitted that there will be sometimes a necessity for a gun of a special caliber for the Navy. It might do to establish for the Army an arbitrary scale of 6-inch, 8-inch, 10-inch, 12-inch, and 16-inch guns for siege and coast-defense purposes, but in constructing vessels of unusual types and for peculiar duties the Navy may prefer an intermediate caliber—for example, a 9-inch gun. The difference between an 8 and a 10 inch gun is greater than most persons would suppose at first thought. They are to each other as the cubes of their like dimensions—as 512 is to 1,000. Sometimes the Navy may wish to build a shorter gun than others of the same caliber, and make it stouter, that it may stand quicker powder and exhibit equal power.

On the whole, therefore, without dwelling further on these details, it seems wise that the Army and Navy should each have a gun factory. There will then be a wholesome rivalry between the two arms of which the Government will get the benefit.

By and by, as the private manufacturers become strong and confident and are dealt with on sound business principles, they may be willing to undertake also the work of finishing guns. If so, the Government's gun factories may be allowed to wear out and disappear, but it will probably be deemed good policy to maintain them to serve as a partial check upon private firms and as schools of experiment and instruction.

Returning from my divergence, I must not omit another board whose conclusions are worthy of the very highest respect. The board on fortifications was organized under act of Congress approved March 3, 1885, making appropriations for fortifications, &c., for the fiscal year ending June 30, 1886, being authorized by the following paragraph of that act:

And the President of the United States shall appoint a board of which the Secretary of War shall be a member and president, to be composed of two officers of the Engineer Corps, two from the Ordnance Corps, two officers of the line of the Navy, and two civilians, which board shall examine and report at what ports fortifications or other defenses are most urgently required, the character and kind of defenses best adapted for each, with reference to armament, the utilization of torpedoes, mines, or other defensive appliances; and for the necessary and proper expenses of said board and for the compensation of the two civilians at $10 per day while so employed in the discharge of said duty the sum of $40,000, to be immediately available, is hereby appropriated; and the report of said board shall be transmitted to Congress by the Secretary of War.

The board was composed of the following-named persons: Hon. William C. Endicott, Secretary of War, president; Brig. Gen. Stephen V. Benét, Chief of Ordnance; Brig. Gen. John Newton, Chief of Engineers; Lieut. Col. Henry L. Abbot, Corps of Engineers; Capt. Charles S. Smith, Ordnance Department; Commander W. T. Sampson, United States Navy; Commander Caspar F. Goodrich, United States Navy; Mr. Joseph Morgan, jr., of Pennsylvania; Mr. Erastus Corning, of New York.

Mr. Morgan is connected with the Cambria Iron Works, and Mr. Corning is an eminent manufacturer. Their report was transmitted to Congress by the Secretary of War January 23, 1886, and it was ordered to be printed by the House of Representatives January 26, 1886, as House Executive Document No. 49, Forty-ninth Congress, first session.

That board was divided into subcommittees, each taking up an important branch of the subject. The conclusions of the joint report, which I hold before me, are precisely such as I have stated of the other boards and such as were arrived at by the Senate select committee, namely, that we are to have hereafter the forged steel, built-up, breech-loading rifle-gun. Moreover, they say that we are to have along the shore near the mouths of the great harbors iron or steel clad turrets similar to those put upon monitors, in which shall be put the very greatest guns; that after those there may come other guns, lighter guns, to be placed *en barbette*—that is to say, in the open air—and protected there by heavy masonry or plates of iron or steel, and the steel will undoubtedly be ultimately adopted.

Harbor defenses will consist of heavy ships outside; within them torpedo vessels of various sizes; next, the heavy fortifications I have noted; and lastly, a thorough system of torpedo defense. This will consist, first, of the class technically known as mines—that is, globular cases of iron, containing explosive material, anchored in the channels at suitable distances from the surface of the water and connected by wire with electric batteries on shore, and exploded either by contact with ships passing over them or by a touch of the operator; secondly, of movable and governable torpedoes sent out from the shore; thirdly, of the stations of the torpedo corps, protected by armor and guarded by artillery of the lighter classes and by machine-guns against the enemy's attempts to reach the operators or disable the torpedoes by cutting the wires or otherwise.

At present we are dealing only with the heavy armament of the fortifications. The fortification board in that report selected a number of the harbors that specially needed defense, and named the number and kind of guns that were required there. The pending bill, if amended as proposed by the Committee on Appropriations, will be precisely in line with that report.

Immediately following it came the report of the select committee appointed by the Senate, of which I had the honor to be a member and chairman. That committee examined a large number of the leading manufacturers of steel in the United States. It visited many of their establishments. Through a subcommittee it visited establishments upon the Pacific coast.

Another subcommittee had the great pleasure of entering and examining, as a special favor, the most advanced establishments in England. The sum and conclusion are in general harmony with those of every board that has reported and with those of the leading nations of Europe.

So far as they relate to securing heavy ordnance they are followed in the amendments before us. Permit me to give those conclusions in full, from Senate Report No. 9, submitted February 8, 1886:

(1) The United States is metallurgically independent for all purposes of warfare.

(2) The manufacture of iron and steel for peaceful purposes has kept pace with the foremost science and skill of the world. For steel-making, the casting capacity is ample, but the heavy forging and finishing of guns and armor will require new and costly plants.

(3) The machinery and machine-tools of the navy-yard are sufficient for the building of engines, but much of it is obsolete and no longer economical; the means of building iron or steel ships are lacking; one yard has a good plant of limited capacity for finishing steel guns, and has done some good work.

(4) As a partial check upon private builders and as a resource in case of necessity, some ships should be built in navy-yards, the parts to be furnished by private foundries. Ships in general should be built by private contract, and private yards are capable of doing the work. The uncertain nature of repairs is such that some Government yards should be kept ready to make them.

(5) Armor plate and engines should be obtained wholly from private manufacturers.

6. The costly experiments of twenty-five years have reached a stage which justifies certain conclusions. Guns should be made of open-hearth steel, forged, breech-loading, chambered, of calibers ranging from 5 to 16 inches, of lengths ranging from 30 to 35 calibers. Armor and projectiles should be made of forged steel. The hydraulic forging press produces better results than the steam-hammer, costs much less, and should be used for Government work. Ships should be constructed of steel, but certain minor classes may be composite of steel and wood.

7. The manufacture of guns suitable for ships and coast defense should be divided between private foundries and Government shops; the former providing the forged and tempered parts, and the latter finishing those parts and assembling them.

8. The Government should establish two factories for machine-finishing and assembling guns. The weight of opinion among Army and Navy experts and prominent manufacturers of heavy work in steel decidedly indicates the Washington navy-yard and the Watervliet Arsenal as the best sites for such factories. When the determination to contract for heavy guns shall have been reached, the localities for finishing them can easily be determined.

9. All needed private capital is ready for cheerful co-operation with the Government in whatever it may require.

10. Proposals for armor and guns should require such quantities and extend over such a series of years as to justify private persons in securing the best plant. Payments should be made only for completed work, and only the guaranteed bids of persons having capital and experience should be considered.

Respectfully submitted.

J. R. HAWLEY, *Chairman.*
N. W. ALDRICH.
W. J. SEWELL.
J. T. MORGAN.
M. C. BUTLER.

These conclusions of your select committee were reached after a year and a half of investigation, calling before it the best manufacturers and the scientific men best qualified to judge. In the first place, it is said that "the United States is metallurgically independent for all purposes of warfare." The question was asked during the debate here as to whether we in reality could make steel of the proper kind and quality. Mr. Swank, vice-president of the American Iron and Steel Association, on page 261 of this report, says:

If the question were asked whether this country could, if required, supply from within its own borders all of the iron ore needed in every branch of its iron and steel industries, including the manufacture of the finer kinds of crucible steel, the answer might unhesitatingly be made in the affirmative. We can make as good iron for crucible steel as the Swedes do if we would only be as painstaking as they are. We have ores in great abundance for the manufacture of Bessemer steel by the original, or acid, process, which is the only process for the manufacture of this kind of steel that now exists in this country, if we except one unsatisfactory experiment that has recently been made with the Thomas-Gilchrist, or basic, process, and one establishment for the manufacture of steel by the Clapp-Griffiths process.

Mr. Fritz, of the Bethlehem Steel Works, and other able men coincided with him. I will not read at length. Mr. Fritz, who is eminent in his calling, was asked—

The CHAIRMAN. Is there any reason why the steel manufacturers of the United States should not be restricted to the use of home material?

Mr. FRITZ. There are several reasons for not restricting the manufacturer to home ores; an important reason being the purer quality of many of the foreign ores, which insures a higher grade and better quality of steel.

This bill requires that these heavy guns shall be made entirely of American products. I hope that will not be construed to compel a manufacturer to use only American ores throughout. I wish the expression were out. The forging, the building, is to be done in this country. All the great plant is to be here. If the manufacturer can by mixing certain qualities of Cuban or Mediterranean ore more easily make the gun-steel, let him do so. If foreign governments should forbid and prevent our bringing in any ore, on the breaking out of hostilities or the threatening of hostilities, we can resort to our own ores and do the whole work here. Take it altogether, we are better equipped than any other nation, because we can produce our own ferro-manganese and all other things necessary in the making of steel; indeed, we export now something of ferro-manganese to Great Britain, which has it not. Great Britain could not make a single steel gun of the quality she has now if she were required to make it all out of her own material, nor could Germany, nor any of the European nations, except perhaps Sweden, and I am not sure as to that. I suppose she may, however, because she furnishes a certain quality of ore that all seem to prefer for certain valuable purposes.

Mr. Fritz was asked by the chairman:

Why do steel manufacturers import foreign material?

Referring to the ferro-manganese.

Mr. FRITZ. Because they can feel more certain of obtaining a high quality of product within the necessary limits of cost.

The CHAIRMAN. Can any works in the United States (with present plant) produce any grade of steel that would probably be called for by Government specifications for guns and armor equal, metallurgically, to foreign?

Mr. FRITZ. Several works in the United States are capable of supplying steel equal metallurgically to the foreign steel.

The CHAIRMAN. Under existing conditions what will be the additional cost of such steel as compared with the foreign of the same quality, laid down in the United States, duty free?

Mr. FRITZ. About the difference in the price of labor.

So I would not forbid the Bethlehem works, the Cambria works, or any of them, to take an ounce of foreign ore. They could get along without it if that were a necessity, but they will produce more easily and economically by mixing. They have been in the habit of sprinkling in a certain degree of the foreign ore chiefly because it is deficient in phosphorous and other irreducible and hostile elements—the constant vexation of the steel-maker.

Now, sir, in response to suggestions from preceding speakers, a word as to the processes of making steel guns. In my judgment, which simply accepts the judgment of the world's scientific and practical leaders, the day of cast-iron guns of any description whatever is gone forever. The largest and most effective guns can not be made of cast-iron with safety. If you undertake to make a 60 or 70 ton cast-iron gun you will fail a large number of times in the casting and an additional large number of times in the firing tests. I am opposed to any further tinkering in making hybrid guns, cast-iron guns lined with steel, or cast-iron guns hooped with steel.

I myself have seen the result of the experiments made during the war in combining cast-iron and wrought-iron in the famous Parrott gun, which was good in its day, an advance in its time, of great service to us on many occasions, but it was unreliable. There were two metals that were not homogeneous. There was the cast-iron that had its own different crystallization, its planes of weakness, resulting from irregularities of form. It was attempted to strengthen it by a good wrought-iron band around the breech. I have seen two one-hundred pound Parrotts go all to pieces, wrought-iron band and all, under my own eyes in the siege of Charleston. So many of them broke in firing on Fort Fisher that, if I recollect aright, orders were given to stop using them.

Why can not some heavy cast-iron guns be utilized is a question often asked. Why not line them with steel tubes and make them breech-loaders? One reason is that so cheaply do we make steel now under the new processes that it is better to make a new gun for the same money. Another reason is that the old cast-iron guns were made for using a quick powder. They were short and the charge of powder was small. We have by improvements in powder raised the charge of the 15-inch guns from some 35 pounds of the old quick powder up to 120, or 130, or 140 pounds of the slower burning powder. The improvement in powder has been as great as that in the manufacture of steel or the form of the gun.

It results that by making a longer gun of steel the slow-burning powder has time for complete combustion, expending its full and due force upon the projectiles and giving it an enormous velocity and an enormous energy. The term "energy" is equivalent to what is popularly called crushing force. The force of the 16-inch steel gun weighing from 105 or 115 pounds is said approximately, for illustration, to be equivalent to taking a column of steel 16 inches in diameter and 1 mile high and letting it drop 33 feet. That helps to give a conception of what is meant by over 50,000 tons of foot-energy or crushing effect. Cast-iron will not stand these strains. Cast-iron guns of the requisite length, say 47 feet, and weighing 110 tons, rifled to carry a 2,000-pounds projectile simply, can not be physically or economically successful.

Innumerable costly experiments, vastly improving powder and steel, and marvelously reducing the cost and increasing the quality of steel especially, and testing all known kinds of guns, powder, projectiles, and armor, have led to the total abandonment of cast-iron for guns in any form. We are told to the contrary by gentlemen of worth, experience, and sincerity, but they are surely belated and mistaken.

Let me describe briefly, because the Senate Committee on Appropriations did me the honor to be interested in this matter and to suggest that I should repeat some of these things here which assisted them in framing the pending amendments—let me describe hastily what I saw, and what very few persons outside of the art have ever seen in Europe, of the improvements in Sir Joseph Whitworth's works in Manchester, England, to which Lieutenant-Commander Chadwick and Lieutenant Jaques of the Navy and myself were kindly admitted.

I saw 30 tons of boiling steel put into a vertical cylinder, perhaps 40 inches in diameter. A piston with a gradually increasing pressure, running up in thirty-five minutes to 6 tons per square inch, was thrust upon that boiling column, and out from the sides darted fine jets of blue burning gas. The pressure was shortly reduced to 3,000 pounds. When the cylinder is so far cooled that contraction no longer goes on the pressure was removed. There is found in its interior little, comparatively, of the honey-combing usually shown in large masses of iron or steel casting. A metallic casting can not be made wholly without it.

The metal cools from and contracts toward the outside, leaving within, apparently, empty spaces. My Southern friends, familiar with the operations of casting bullets for the old-fashioned rifles, will find in each bullet, if they pare it down carefully, a little hole the size of a pinhead. Whitworth's process of fluid compression reduces the honeycombing to a minimum, and leaves no large mass of porous and refuse metal at the top of the column, as other methods must. In the ordinary method of casting, this matter, technically called "sinking-head," is from 25 to 33 per cent. of the whole mass.

When the column of steel I have described—40 inches in diameter, and, I roughly estimate, 15 feet long—is bored out, taking away the honey-combs, it leaves a cylinder of steel of better quality for its cost than any other process gives.

But that is not all. The steel manufacturers of England, led by the necessities of their government and the high rewards it offered to improve the treatment of masses of steel far heavier than ordinary trade requires, have vastly improved and enlarged the machinery of hydraulic forging. I saw in the Whitworth shops a cylindrical ingot of steel 42 inches in diameter and 92 inches (7 feet 8 inches) long, weighing 16 tons, taken easily from the glowing furnace and carried quickly and gently to the forge, where one end was laid upon an anvil between two uprights, a frame of strong pillars and cross-beams. Close above the white and sparkling metal hung a hammer-head adjustable to the bulk of the metal to be forged. The face of the ram that bears upon the steel was, perhaps, 2 feet long and 8 inches wide. Its longer dimension coincided with the axis of the steel cylinder. Near by stood a lad to control the ordinary levers or throttle bars by which steam or hydraulic power is applied. For his guidance there hung a dial, marked as the clock-face is, and with an index that indicated precisely the travel of the ram, upward and downward.

The lad pulled the lever, the hammer went down gracefully and silently, with a pressure of 3,000 tons, six or eight inches into the cylinder, and the mass of 16 tons gave way, spread and flowed from end to end as dough gives way under the fist of the baker. After each successive pressure the cylinder was revolved a few degrees by hydraulic power to be ready for the next, as the blacksmith turns the rod with his left hand for successive strokes of the hammer. There was but a few seconds interval between the pressures, the work being conducted more rapidly than with the heavy steam-hammer. In one heat more than half the cylinder was drawn down into a solid steel shaft 20 inches in diameter and 17 feet long. Ingots of 30, 40, or 60 tons weight can be forged by this machine. The gross weight of the tube, the heaviest forging for the 16-inch gun, is 46 tons.

The gun-foundry board, after witnessing similar work, declared that "as to the treatment of metal after casting, there can be no doubt of the superiority of the system adopted by Sir Joseph Whitworth over that of all other manufacturers in the world." The British admiralty require that the propellers, shafting, and the working barrels of all the cylinders shall be made of Whitworth's fluid-compressed steel, and that the cranks shall be made of the same or of Vicker's steel. Hotchkiss, the famous American builder of small steel guns for France, Germany, and England, would have none but Whitworth's steel.

The previous method of treating masses for guns and armor, and still in use in other establishments, is by the steam-hammer. The largest in the world is in the works of Schneider & Co., Creuzot, France. The hammer weighs 100 tons and has a fall of 16.4 feet. The anvil-block is 18.4 feet high and weighs 720 tons, the largest piece of it weighing 120 tons. The cost of such a structure in the United States would probably be half a million dollars. Its work is obviously inferior to hydraulic forging, and the gun-foundry board's estimate cost of the hydraulic forge is $150,000. It does not require an expert to decide that

the steel produced by the lathe is more suitable for heavy guns. After witnessing its work one would as soon use a hammer to work dough as to work steel.

There is nothing done in the United States to justify American manufacturers in introducing the costly processes used in England for guns and armor, but leading firms and corporations stand ready and eager to contract to reproduce the plants here. There is not the slightest doubt that the moment they should begin to do so they would begin to improve the machines, processes, and products, and doubtless also we could again lead the world in heavy guns, as we did in former times, under the instruction of Bomford, Dahlgren, and Rodman.

Enough about that; nor will I dwell further upon the condition of our forts except to tell you what is to be proven as easily as a simple statement of accounts that there are a dozen nations in the world that can sail straight into New York Harbor to-day in spite of anything and all things we have there, anchor in the lower bay within a mile of the Battery, and put that entire city under contribution, and it can be done within a fortnight, it can be done within less time than that, from the day of threatened hostilities.

Halifax, a splendid English port and a coaling station, may well be a rendezvous of British supplies at any time, and is within thirty-one hours from Portland. Bermuda is but a few more hours from New York or from Hampton Roads. Havana, a rallying point for the Spanish navy, is forty-five hours from New Orleans. So these nations have their great coaling depots, and their naval stations, ten days or twelve days' sail from home and from thirty-one to seventy-two hours from our absolutely defenseless ports.

We have been living along and living along. The Divine Providence has taken care of us as He is said to take care of children and fools and drunkards. "It is the unexpected that happens" is an old saying, but it is truer in war than in anything else. The list of the wars of one hundred years shows that most of them have come suddenly. It is the policy of attacking nations to let them so come.

There are two thousand millions of destructible property in New York city within the reach of the first-class ships of England. What is to prevent her levying upon it if the two nations should resort to war, which God forbid. In eight of the great seaports of the country there are four billions and a half ($4,500,000,000) of taxable, ascertained, returned property, destructible property of all descriptions, within reach of foreign guns that may come within reach of them any day without asking us a question or receiving a serious check.

Are we to go on in this way? If so, unless the history of nations hereafter shall be altogether different from what it has been heretofore, there will some time come to us a day of humiliation. It is not living as men of common-sense, courage, and patriotism ought to live.

I do not complain of the delay, because it is useless, and, thank God, we have not lost honor by it. What is of less consequence, we have not lost money by it. We have saved the cost of twenty years of experiment; longer delay is inexcusable. While this bill does not contain all I wish nor all that is indispensable; while it does not provide for torpedoes, forts, gun platforms and carriages, and heavy armor for casemates and turrets, yet it is so much of a step that I am thankful for it and take courage. It does provide for the manufacture of 10,000 tons of the parts of heavy steel guns and for the beginning of the work here of finishing them, and if we do thus much we shall not stop with it.

As we stand here to-day, we must go and beg of busy English and German and French manufacturers to give us the steel plate for our monitors, to give us the steel plate for the vessels authorized one year ago, and to give us the heavy, rough parts for the steel guns those ships will need; to give us also the steel armor-plate and the rough gun-forgings for the ships that we are to order this afternoon, I hope, in the bill just reported from the Naval Committee. Yet foreign makers can not be depended on. They may contract to furnish it. They may get the work half or quite done, and their governments may say to them: "The relations between us and the United States are changed; send them no munitions of war."

Such things have frequently happened. Great Britain has frequently put her hand upon her home manufacturers and said: "Hold those ships and guns; we will take them ourselves."

If we must make such contracts abroad, we must continue to live at the mercy of strangers, live defenseless as to our seacoasts.

Let us begin. The people want this done. There is no doubt about that. I am amazed, at seeing the anxiety of the American politician and legislator to discover what is politic and what is popular, that they have not discovered that we can not do a better thing to obtain the good-will of the nation and at the same time sincerely serve our country than to begin a well-judged, even if necessarily expensive system of coast defense. The cost is a fraction only proportionately of what it was in 1830 and 1840 for the fortifications that we then had the courage to undertake.

Shall I say that there are some aspects of the situation that are not altogether reassuring? I will say frankly what they are, and I am glad I have the attention of some of my friends on the other side. I am not going to discuss party politics; but is not this true that I am about to say, that a considerable portion of this country was engaged for a number of years in not only denouncing but in bitterly fighting the Government of the United States? That true, and there is scarcely anything short of the Divine miracles that equals the wonder of the forgetfulness that has largely come over us as to the resentments of it and the reconciliations that have followed. Our Southern Democratic friends and our friends, late confederates in arms, all say, "We would stand by the old flag; we would give our lives for it in any war with any foreign power; we would show whether we are Americans or not." So they would, I doubt not; but has the long habit of a party out of power, and so terribly out of power as to be fighting the Government—has that long habit of complaint concerning the Federal Government entirely been overcome? Are we all yet indeed Americans? Has the Democratic party become Americanized as it ought to have been, as it will be, as it is becoming, I hope?

With what favor are these propositions received? How have they come begging at the doors of Congress year after year? Why should there be any party disagreement about these questions? Will you, my Democratic friends, look at the history of Democratic administrations and Democratic Secretaries of the Navy and see what a nationality and what a national spirit we had during those twenty years before the war, when the Democratic party, largely a Southern party, almost wholly controlled this Government? We had possible war with Spain; we had a war with Mexico; we did not know where or whither politics might drift us. The institution of slavery was a great national interest as you then regarded it—one to be defended and extended. It was a prime element in our relations with Mexico and Spain and in the jealousy with which England was regarded. So we made the best Navy in many respects in the world before the war. See the Wabash and the Minnesota and their sister ships, and there is nothing more stately or finer on the water now. The modern art of ship-building for war at sea has given us hideous and clumsy black monsters terrible for destruction. Nothing in them approaches the beauty of the old Wabash as she lies now a veteran on the retired-list. With her twenty-six 9-inch guns upon a side and pivot-rifles fore and aft, I saw her delivering her fire at Port Royal, and no more beautiful picture ever greeted the eyes of man—if one could forget the dreadful meaning of her work.

Our Government tried to get the best in all things. The Rodman and Dahlgren ideas of gun-building were ours, an advance from all that was previously known of cast-iron guns. The building, sailing, and arming of our ships was of the best. But when we were suddenly put in the face of new problems in the beginning of the war, see with what ingenuity the people on both sides directed themselves to the tasks. The little fight between the Monitor and the Merrimac revolutionized the navies of the world. I have a pamphlet issued soon after by an eminent English engineer, acknowledging the demonstration, and entitled "England without a Navy."

We invite gentlemen without reference to party to take into consideration the serious character of these propositions before us. Let us agree that we will wisely and prudently vote to renew and rejuvenate our Navy and our coast defenses in accordance with the highest demands of modern science and art. Five or ten millions a year will do it in a few years.

The bills 623 and 624, which I had the honor to report by direction of the Committee on Coast Defenses, cover the ground under discussion more thoroughly; but as their passage this session, or even their consideration this session, is out of the question, our only hope lies in the two pending sections reported by the Committee on Appropriations as amendments to the regular annual fortifications bill. As that bill comes to us it appropriates the beggarly sum of $100,000 for the protection, preservation, and repair of fortifications and works of defense—hardly enough to keep the grass cut and check the weather's destructive work. It gives $50,000 to continue the sea-wall around Governor's Island; $20,000 to continue torpedo experiments, and $500,000 "for the armament of seacoast fortifications, including the procurement of steel forgings for heavy guns, for guns, carriages, projectiles, fuses, powder, implements, and materials, which shall all be of American production, their trial and proof, and the testing of improvements of the same and all necessary expenses incident thereto."

Fifty thousand dollars is reappropriated to finish the cast-iron guns contracted for with the South Boston Iron Works, and sixty to a hundred thousand dollars for cast-iron mortars.

The pretense of authorizing the expenditure of a fraction of $500,000 to buy steel forgings for heavy guns which must be of American production is wretched. The plant necessary to begin the work of heavy forging would cost not less than $800,000, and no manufacturer would make the investment save under a contract for several millions, running through a series of years.

I insert in my remarks the committee's proposed substitute for the second section, which I have quoted:

For the purchase, manufacture, and erection of the necessary tools and machinery for the finishing and assembling of heavy ordnance at the Frankfort arsenal, Philadelphia, Pa.; for gun-carriages, projectiles, fuses, powder, implements, and materials for the trial and proof of such ordnance, and to complete the two 10-inch breech-loading steel guns now under fabrication, their trial and proof, and all necessary expenses incident thereto, including compensation of draughtsman on gun construction, $400,000, to be available until expended.

And I also give section 5 in full:

SEC. 5. That the Secretary of War and the Secretary of the Navy be, and

hereby are, authorized jointly to make contracts with responsible steel-manufacturers, after suitable advertisements, to continue not less than thirty days, in newspapers most likely to reach the manufacturers addressed, for the supply of rough-bored, rough-turned, and tempered steel in forms suitable for heavy ordnance adapted to modern warfare, for Army and Navy purposes, in quantity not to exceed 10,000 gross tons, in quality and dimensions conforming to specifications, subject to inspection and tests at each stage of manufacture and including all the parts of each caliber specified: *Provided*, That no money shall be expended except for steel accepted and delivered; and each bidder shall contract to deliver yearly a specified quantity of each caliber, the time of delivery of the smaller calibers to commence at the expiration of not more than eighteen months and the largest calibers at the expiration of not more than three years from the date of the execution of the contract; and all the forgings shall be of American product and manufactured in the United States; and one-half of the material purchased under this provision shall be for the use of the War Department, and one-half for the use of the Navy Department, in the armament of ships heretofore or hereafter authorized by Congress; and for the purposes of the foregoing provision the sum of $6,000,000 is hereby appropriated, to be available during six years from the date of the execution of the contract.

Six million dollars is to be available for six years, the payments to be made upon the delivery of inspected goods. The first payment would not be required under eighteen months. The average payments would be, say, a million and a quarter a year. Not much for an assured beginning of a great patriotic work.

Let me as strengthening and fortifying what I have said here read a few words from a most distinguished gentleman. As in duty bound by his political creed, a Republican must dissent from certain opinions of Hon. Samuel J. Tilden, but no statesman of the country has made so terse, compact, vigorous, manly, and patriotic statement of truth and duty as he has in a letter which I have lately had the honor to receive from him. I give the following extract from his letter of June 9, 1886:

> The apathy of Congress on this subject would be incredible if it did not confront us. It contrasts with the rivalry which is so conspicuous to insist on our taking a high tone toward foreign nations on every occasion of difference between them and us. It contrasts also with the favor which is shown to schemes of prodigality and schemes to waste the public resources on things known to be absolutely useless.
>
> Among the people the desire for liberal appropriations toward the means of public defense is well nigh unanimous. I am well informed as to the popular feeling from the circumstance that more than seven hundred newspapers from all parts of the country, and representing all political parties, containing expressions upon the subject, have been sent to me.
>
> Very truly, yours,
>
> S. J. TILDEN.

I have not the slightest doubt that those newspapers represent the real sentiment of the American people, and that nothing we can do will on the whole be received with more popular favor than the work proposed in this bill of beginning to be ready to defend ourselves.
